VERSION DECLARATION	14
What's New in Version E11G	14
What's New in Version E11F	15
What's New in Version E11E	15
What's New in Version E11D	16
What's New in Version E11C	16
What's New in Version E11B	17
Version E11A at Introduction	17
SUPPORTED MODELS	18
PROGRAMMING OVERVIEW	19
Establishing Communications	19
Install NI-VISA	19
Connect the Instrument	22
Remote Control	23
User-defined Programming	23
Send SCPI Commands via NI-MAX	23
Using SCPI with Telnet	23
Using SCPI with Sockets	24
Introduction to the SCPI Language	25
Command and Query Structure	25
Long and Short Form	25
Syntax Notation	25
Parameter Types	26
COMMANDS & QUERIES	28
Common (*) Commands	29
*IDN	30
*OPC	30
*RST	31
Root(:) Commands	32
:AUToset	33
:PRINt	33
:FORMat:DATA	34
ACQUire Commands	35
:ACQuire:AMODe	36

	:ACQuire:CSWeep	.36
	:ACQuire:INTerpolation	.37
	:ACQuire:MMANagement	.38
	:ACQuire:MODE	.39
	:ACQuire:MDEPth	.40
	:ACQuire:NUMACq	.42
	:ACQuire:POINts	.42
	:ACQuire:RESolution	.43
	:ACQuire:SEQuence	.44
	:ACQuire:SEQuence:COUNt	.45
	:ACQuire:SRATe	.46
	:ACQuire:TYPE	.47
CH	ANnel Commands	.48
	:CHANnel:REFerence	.49
	:CHANnel <n>:BWLimit</n>	.50
	:CHANnel <n>:COUPling</n>	.51
	:CHANnel <n>:IMPedance</n>	.52

Version Declaration

This chapter declares the modifications of command in the most recent release of the programming guide version.

What's New in Version E11G

This version has corrected the short form of various commands, some command formats, redundant spaces in examples, and errors in Chinese symbols. Updated the waveform reconstruction examples in the chapter Common Command Examples. More detailed descriptions of the new and changed commands appear below.

Command	Represent
:DISPlay:AXIS:POSition	New Command, sets the display position of the vertical axis of the axis label.
:DISPlay:HIDemenu	New Command, hides menu immediately.
:FUNCtion <x>:FFT:SEARch:MARKer<n></n></x>	New Command, sets the frequency of the specified marker.
:FUNCtion <x>:FFT:SEARch:MARKer<n>:S HOW</n></x>	New Command, turns on the specified FFT marker.
:FUNCtion <x>:FFT:SEARch:MON</x>	New Command, sets the FFT marker on peaks or harmonics.
:FUNCtion <x>:FFT:SEARch:PORDer</x>	New Command, sets the sorting method for FFT peak values.
:FUNCtion <x>:FFT:SEARch:TABLe</x>	New Command, turns on the FFT search table.
:FUNCtion <x>:FFT:SEARch:TABLe:DELTa</x>	New Command, sets the display state of increments in the FFT search table.
:FUNCtion <x>:FFT:SEARch:TABLe:FREQ uency</x>	New Command, sets the display state of frequency in the FFT search table.
:MEASure:ADVanced:P <n>:SHIStory</n>	New Command, returns statistics for the specified advanced measurement item.
:MEASure:DITMe <n>:EDGE1</n>	New Command, sets the starting edge of the specified delta time.
:MEASure:DITMe <n>:EDGE2</n>	New Command, sets the end edge of the specified delta time.
:MEASure:DITMe <n>:SLOPe1</n>	New Command, sets the start edge slope type of the specified delta time.
:MEASure:DITMe <n>:SLOPe2</n>	New Command, sets the end edge slope type of the specified delta time.
:MEASure:DITMe <n>:THReshold1</n>	New Command, sets the threshold type for the start edge of the specified delta time.
:MEASure:DITMe <n>:THReshold2</n>	New Command, sets the threshold type for the end edge of the specified delta time.
:MEASure:RDISplay	New Command, sets the display style of measurement results.
Multiple Cursors Commands	New Commands, different from Single Group Cursor Commands
COUNter:CURRent	New Command, returns the current counter value.

Command	Represent
:COUNter:STATistics:VALue	New Command, returns the the counter statistics.
:DECode:LIST <n>:RESult</n>	New Command, returns the result of the specified decoding list.,Different from the command :DECode:BUS <n>:RESult</n>
:WAVeform:BYTeorder	New Command, sets the byte order of transmitted waveform data words.
:DECode:BUS <n>:PROTocol :TRIGger:TYPE</n>	Changed, updates parameter ARINC429 to A429
:MEASure:SIMPle:ITEM :MEASure:ADVanced:P <n>:TYPE</n>	Changed, new parameters ULOWer, DTIMe1, DTIMe2, DTIMe3, and DTIMe4.
:MEASure:ADVanced:P <n>:SOURce1 :MEASure:SIMPle:SOURce :MEASure:THReshold:SOURce</n>	Changed, new parameters F <x>, ZF<x> and ZM<m>.</m></x></x>
:SAVE:IMAGe	Changed, add optional parameter {MON MOFF}

What's New in Version E11F

New features in version E11F of the software are:

- Support for SDS800X HD, SDS3000X HD.
- Modify the value range of parameter for some commads:
 ":CURSor:X1",":CURSor:X2", ":CURSor:Y1",":CURSor:Y2"," :FUNCtion:GVALue"
- Modify the incorrect parameter enumeration of the commad ":DIGital:BUS<n>:FORMat".
- Add parameters SENT, MANchester, ARINC429, USB20 for the command :DECode:BUS<n>:PROTOCol.
- Add parameters ARINC429 for the command :TRIGger:TYPE.
- Modify the parameter string length of :DIGital: LABel<d> from 7 to 8.

What's New in Version E11E

New features in version E11E of the software are:

- Support for SDS7000A, SDS1000X HD.
- New support sources for some modules: CURSor, FUNCtion, MEASure, MEMory, SAVE.
- The commad "PRINt" supports for obtaining inverted images.
- New commad in dispay group: ":DISPlay:MENU:HIDE".
- New commad in measure group: ":MEASure:ADVanced:CLEar", ":MEASure:SIMPle:CLEar".
- Add counter commands.
- Add a read waveform data example in C#.

What's New in Version E11D

New features in version E11D of the software are:

- Support for SDS6000L.
- Add Qualified, Delay, Nth Edge, Setup/Hold trigger commands.
- New option "FTRIG" for ":TRIGger:MODE" command.
- New commads "TRIGger:FREQuency", "TRIGger:EDGE:IMPedance", "FORMat:DATA".
- Add 1553B, SENT, Manchester decode commands.
- Add bus decoding result query.
- Add FFT Search result query.
- New commands for parameter settings of filter, maxhold, interpolation, average and eres function operators
- Add search commands.
- New commands for axis label settings.
- New commands for horizontal and vertical reference strategy settings.
- New command to get the number of acquired frames.
- Update the save command ":SAVE:BINary <path>" to "SAVE:BINary <path>,<src>".
- Supplementary path description of save commands, the path type can be local, network storage, and udisk.
- Support memory source(Mx), function source(Fx), digital bus(DIGital) for save commands.
- Modify the description of "SAVE:MATLab", which can only be saved in mat format at present.
- The return header of "WAVeform:DATA" shows the number of digits according to the actual data length, instead of the fixed 9 digits.

What's New in Version E11C

New features in version E11C of the software are:

- Support for SDS2000X HD.
- New vertical resolution command for SDS2000X Plus.
- DVM commands.
- Memory commands.
- Measure cursors commands.
- New measurement item: PSLOPE, NSLOPE, TSR, TSF, THR, THF.
- Update C# example.
- New Read Waveform Data of FFT Example.
- Update Read Waveform Data Example.
- Update Read Sequence Waveform Data Example.

What's New in Version E11B

New features in version E11B of the software are:

- Measure threshold
- Network storage
- Memory management:Auto,Fixed Memory Depth and Fixed Sampling Rate
- Display menu style: EMBedded|FLOating
- Option for specifying FFT autoset as SPAN|PEAK|NORMal
- Set FFT span: FUNCtion<x>:FFT:SPAN
- :FUNCtion:INTGate revised to :FUNCtion<x>:INTegrate:GATE
- :FUNCtion:INTGate:GA|GB revised to :FUNCtion:GVALue
- PRINt revised to PRINt?
- Read sequence waveform
- Support reading waveform by piece
- WAV:PRE? and WAV:DATA? return in standard binary block format
- Support for SHS800X/SHS1000X/SDS6000A

Version E11A at Introduction

Compared with previous versions, this new document redefines the instruction format of each group according to the SCPI specifications and adopts tree-style management. However, not all series models support these instructions, see the next chapter "Supported Models" for details.

Supported Models

The commands and queries listed in this document can be used for SIGLENTs Digital Oscilloscope Series as shown below. Models are arranged according to their initial release dates.

Model	Version for New Commands
SDS5000X	0.9.0 and later
SDS2000X Plus	1.3.5R3 and later
SDS6000 Pro/ SDS6000A	1.1.7.0 and later
SHS800X/ SHS1000X	1.1.9 and later
SDS2000X HD	1.2.0.2 and later
SDS6000L	1.0.1.0
SDS1000X HD	1.1.0.2
SDS7000A	1.0.7.0
SDS800X HD	1.1.3.1
SDS3000X HD	1.0.3.0

Programming Overview

This chapter introduces how to build communication between the instrument and the PC. It also introduces how to configure a system for remote instrument control.

Users can remotely control the instrument through USB and LAN interfaces, in combination with National Instruments NI-VISA and programming languages. Through the LAN interface, users can communicate using VXI-11, Sockets and Telnet protocols, depending on the capabilities of the specific instrument.

Establishing Communications

Install NI-VISA

USB control requires the National Instruments NI-VISA Library for communications. We also recommend using it for LAN communications for its ease of use, but sockets, telnet, and VXI-11 can also be implemented via LAN connections.

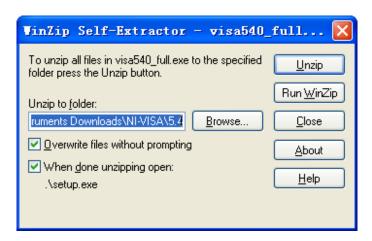

Currently, NI-VISA is packaged in two versions: A full version and a Run-Time Engine version. The full version includes the NI device drivers and a tool named NI MAX which is a user interface to control and test remotely connected devices. The Run-Time Engine is recommended, as it is a much smaller download than the full version and includes the necessary tools for basic communication to instruments.

For example, you can get the NI-VISA 5.4 full version from http://www.ni.com/download/ni-visa-5.4/4230/en/.

You also can download NI-VISA Run-Time Engine 5.4 to your PC and install it as the default selection. Its installation process is similar to the full version.

After you downloaded the file, follow these steps to install NI-VISA (The full version of NI-VISA 5.4 is used in this example. Newer versions are likely and should be compatible with SIGLENT instrumentation. Download the latest version available for the operating system being used by the controlling computer):

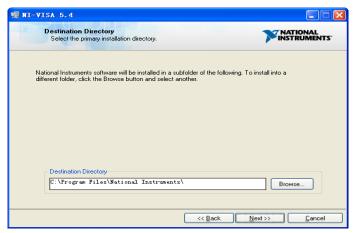

a. Double click the visa540 full.exe, the dialog will be similar to that shown below:

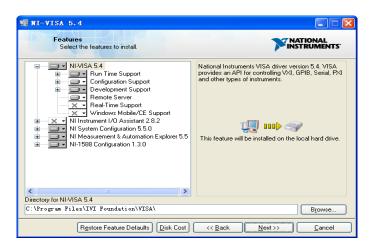

b. Click Unzip, the installation process will automatically launch after unzipping files. If your computer needs to install .NET Framework 4, it may auto start.

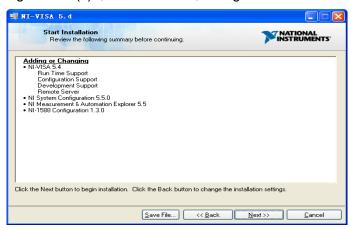

c. The NI-VISA installing dialog is shown above. Click Next to start the installation process.

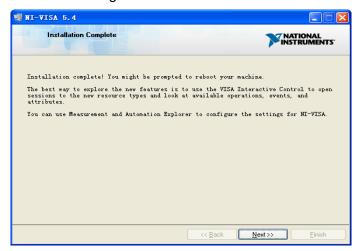

d. Set the install path. The default path is "C:\Program Files\National Instruments\", you can change it. Click Next, dialog shown as above.

e. Click Next twice, in the License Agreement dialog, select the "I accept the above 2 License Agreement(s).", and click Next, dialog shown as below:

f. Click Next to begin the installation.

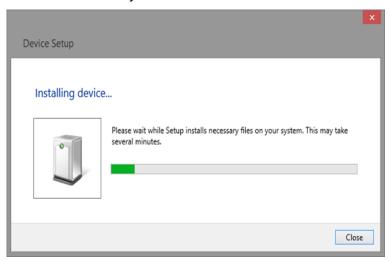

g. Now the installation is complete. Reboot your PC.

Connect the Instrument

Depending on the specific model, your oscilloscope may be able to communicate with a PC through the USB or LAN interface.

Connect the instrument and the USB Host interface of the PC using a USB cable. Assuming your PC is already turned on, turn on your oscilloscope, and then the PC will display the "Device Setup" screen as it automatically installs the device driver as shown below.

Wait for the installation to complete and then proceed to the next step.

Remote Control

User-defined Programming

Users can use SCPI commands via a computer to program and control the digital oscilloscope. For details, refer to the introductions in "Programming Examples".

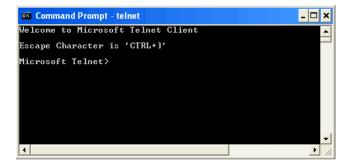

Send SCPI Commands via NI-MAX

NI-Measurement and Automation eXplorer (NI-MAX) is a program created and maintained by National Instruments. It provides a basic remote control interface for VXI, LAN, USB, GPIB, and Serial communications. It is a utility that enables you to send commands one-at-a-time and also retrieve data from connected devices. It is a great tool for troubleshooting and testing command sequences. The oscilloscopes can be controlled remotely by sending SCPI commands via NI-MAX.

Using SCPI with Telnet

Telnet provides a means of communicating with the oscilloscopes over a LAN connection. The Telnet protocol sends SCPI commands to the oscilloscopes from a PC and is similar to communicating with the oscilloscopes over USB. It sends and receives information interactively: one command at a time. Windows operating systems use a command prompt style interface for the Telnet client. The steps are as follows:

- 1. On your PC, click Start > All Programs > Accessories > Command Prompt.
- 2. At the command prompt, type in telnet.
- 3. Press the Enter key. The Telnet display screen will be displayed.

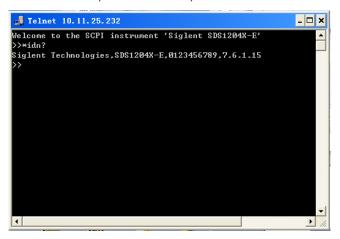

4. At the Telnet command line, type:

```
open XXX.XXX.XXX 5024
```

Where XXX.XXX.XXX is the instrument's IP address and 5024 is the port. You should see a response similar to the following:

5. At the SCPI> prompt, input the SCPI commands such as *IDN? to return the company name, model number, serial number, and firmware version number.

- 6. To exit the SCPI> session, press the Ctrl+] keys simultaneously.
- 7. Type *quit* at the prompt or close the Telnet window to close the connection to the instrument and exit Telnet.

Using SCPI with Sockets

Socket API can be used to control the SDS2000X Plus series via LAN without installing any other libraries. This can reduce the complexity of programming.

SOCKET ADDRESS IP address+port number

IP ADDRESS SDS IP address

PORT NUMBER 5025

Please see the section "Examples of Using Sockets" for the details.

Introduction to the SCPI Language

Command and Query Structure

Commands consist of set commands and query commands (usually called commands and queries). Commands modify oscilloscope settings or tell the oscilloscope to perform a specific action. Queries cause the oscilloscope to return data and status information. Not all commands have both a set and a guery form. Some commands have set only and some have guery only.

Commands usually start with a colon [:]. A keyword is separated by a colon (:) followed by optional parameter settings. A question mark (?) is added after the command line to indicate that this function is queried. The command keyword is separated from the first parameter by spaces. Example:

:CHANnel:SCALe <value>

:CHANnel:SCALe?

Long and Short Form

Each command has both a long and a short form. Note that elsewhere in this document a special notation is employed to differentiate the short form keyword from the long form of the same keyword. The long form of the keyword is shown, with the short form portion shown in uppercase characters, and the rest of the keyword is shown in lowercase characters. If you want to abbreviate, you have to type all the capital letters in the command format.

Example:

:CHANnel1:SCALe?

:CHAN1:SCAL?

Syntax Notation

The following notations are used in the commands:

< > (Angle Brackets)

Angle brackets enclose words that are used as placeholders, of which there are two types: the header path and the data parameter of a command. Parameters are distinguished by enclosing the type name in angle brackets.

:= (Defined As)

A colon followed by an equals sign separates a placeholder from the description of the type and range of values that may be used in a command instead of the placeholder.

{} (Braces)

Braces or curly brackets are used to enclose one or more parameters that may be included zero or more times. The vertical bar (|) can be read as "or" and is used to separate alternative parameter options.

[] (Square Brackets)

Square brackets are used to enclose a keyword that is optional when programming the command; that is, the instrument shall process the command to have the same effect whether the option node is omitted by the programmer or not.

... (Ellipsis)

An ellipsis (trailing dots) indicates that the preceding element may be repeated one or more times.

Parameter Types

Enumeration

Enter these arguments as unquoted text words. Like keywords, enumeration arguments follow the same convention where the portion indicated in uppercase is required and that in lowercase is optional.

Numeric

Many oscilloscope commands require numeric arguments. The syntax shows the format that the oscilloscope returns in response to a query. This is also the preferred format when sending the command to the oscilloscope, though any of the formats will be accepted. This documentation represents these arguments as described below.

Туре	Meaning
<nr1></nr1>	Signed integer value
<nr2></nr2>	Floating point value without an exponent
<nr3></nr3>	Floating point value with an exponent
 	Signed or unsigned integer in binary format

Quoted String

A quoted string is simply a group of ASCII characters enclosed by double quote ("). The following is an example of a quoted string: "This is a quoted string". This documentation represents these arguments as follows: Some commands accept or return data in the form of a quoted string

Туре	Meaning
<qstring></qstring>	Quoted string of ASCII text

A quoted string can include any character defined in the 7-bit ASCII character set. Follow these rules when you use quoted strings:

- 1. Use a double quote character to open and close the string.
 - Example: "this is a valid string".
- 2. You can mix quotation marks within a string as long as you follow the previous rule. But cannot include a double quote character within a string by repeating the quote.
 - Example: "this is an 'acceptable' string".
- 3. You cannot include double quotes character within a string by repeating the double quote. Example: "here is a "" mark". It will be recognized as "here is a ".
- 4. Strings can have upper or lower case characters. But the oscilloscope will automatically convert it to uppercase.
- 5. A carriage return or line feed embedded in a quoted string will be recognized as the string.

Here are some invalid strings:

- "Invalid string argument' (quotes are not of the same type)
- "here is a " " mark" (Duplicate double quotes inside double quotes)

Commands & Queries

This chapter introduces each command subsystem of the **SIGLENT** Digital Oscilloscope Series command set. The contents of this chapter are shown as below:

- Common (*) Commands
- Root(:) Commands
- ACQUire Commands
- CHANnel Commands
- CURSor Commands
- DECode Commands
- DIGital Commands [Option]
- DISPlay Commands
- DVM Commands
- FUNCtion Commands
- HISTORy Commands
- MEASure Commands
- MEMory Commands
- MTEst Commands
- RECall Commands
- REF Commands
- SAVE Commands
- SYSTem Commands
- TIMebase Commands
- TRIGger Commands
- WAVeform Commands
- WGEN Commands

Common (*) Commands

The IEEE 488.2 standard defines some general commands for querying the basic information of an instrument or performing common basic operations. These commands usually start with *, and the command key length is 3 characters.

- ◆ *IDN
- *OPC
- ◆ *RST

*IDN

Query

DESCRIPTION The command query identifies the instrument type and

software version. The response consists of four different fields providing information on the manufacturer, the scope model,

the serial number and the firmware revision.

QUERY SYNTAX *IDN?

RESPONSE FORMAT Siglent Technologies, <model>, <serial number>, <firmware>

<model>:= The model number of the instrument.

<serial number>:= A 14-character code.

<firmware>:= The software revision of the instrument

EXAMPLE The following command queries the instrument type and

software version.

Query message:

*IDN?

Response message:

Siglent

Technologies, SDS5104X, SDS5XDAD2R0160, 4.6.0.8.7R1

*OPC

Query

DESCRIPTION The command query places an ASCII "1" in the output queue

when all pending device operations have completed. The

interface hangs until this query returns.

QUERY SYNTAX *OPC?

RESPONSE FORMAT 1

EXAMPLE Query message:

*OPC?

Response message:

1

*RST

Command

DESCRIPTION Resets the oscilloscope to the default configuration, equivalent

to the Default button on the front panel.

COMMAND SYNTAX *RST

EXAMPLE The following command resets the oscilloscope.

Command message:

*RST

RELATED COMMANDS :RECall:FDEFault

:RECall:SETup :SAVE:DEFault :SAVE:SETup

Root(:) Commands

The Root commands for querying the basic information of an instrument or performing common basic operations. These commands are only located at the root of the command tree, with no next level and no parameters.

• :AUToset

• :PRINt

• :FORMat:DATA

:AUToset

Command

DESCRIPTION This command attempts to automatically adjust the trigger,

vertical, and horizontal controls of the oscilloscope to deliver a usable display of the input signal. Autoset is not recommended

for use on low frequency events (< 100 Hz).

COMMAND SYNTAX :AUToset

EXAMPLE Command message:

:AUToset AUT

:PRINt

Query

DESCRIPTION The query captures the screen and returns the data in

specified image format.

QUERY SYNTAX :PRINt? <type>[,<format>]

<type>:= {BMP|PNG}

◆ BMP selects bitmap format

PNG selects Portable Networks Graphics format

<format>:= {NORMal|INVerted}

RESPONSE FORMAT

<b

Image data in specified image format

EXAMPLE See the code in Screen Dump (PRINt) Example

:FORMat:DATA

Command/Query

DESCRIPTION

The command sets the returned precision of the command with data in NR3 format. The current default precision is 3-digits.

The query returns the current precision of the returned data.

COMMAND SYNTAX

:FORMat:DATA <option>[,<digit>]

<option>:= {SINGle|DOUBle|CUSTom}

- SINGle indicates that the single precision type and significant digit is 7.
- DOUBle indicates that the double precision type and significant digit is 14.
- CUSTom is user-defined precision, and <digit> need to be set.

<digit>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1,64].

QUERY SYNTAX

:FORMat:DATA?

RESPONSE FORMAT

CUSTom, < digit>

<digit>:= Value in NR1 format, including an integer and no decimal point, like 1.

EXAMPLE

The following command sets the returned data precision of the command to 5-digits.

Command message:

:FORMat:DATA CUSTom,5 FORM:DATA CUST,5

Query message: FORM:DATA?

Response message:

CUSTom.5

ACQUire Commands

The :ACQUIRE subsystem commands control the way in which waveforms are acquired. These commands set the parameters for acquiring and storing data.

:ACQuire:AMODe

• :ACQuire:CSWeep

• :ACQuire:INTerpolation

:ACQuire:MMANagement

:ACQuire:MODE

:ACQuire:MDEPth

:ACQuire:NUMACq

:ACQuire:POINts

:ACQuire:RESolution

:ACQuire:SEQuence

:ACQuire:SEQuence:COUNt

:ACQuire:SRATe:ACQuire:TYPE

:ACQuire:AMODe

Command/Query

DESCRIPTION The command sets the rate of waveform capture. This

command can provide a high-speed waveform capture rate to

help capture signal anomalies.

The query returns the current acquisition rate mode.

COMMAND SYNTAX :ACQuire:AMODe <rate>

<rate>:= {FAST|SLOW}

FAST selects fast waveform capture SLOW selects slow waveform capture

QUERY SYNTAX :ACQuire:AMODe?

RESPONSE FORMAT <rate>

<rate>:= {FAST|SLOW}

EXAMPLE The following command sets the FAST acquisition rate mode.

Command message: :ACQuire:AMODe FAST ACQ:AMOD FAST

Query message: ACQ:AMOD?

Response message:

FAST

:ACQuire:CSWeep

Command

DESCRIPTION The command clears the sweep and restarts the acquisition. It

is equivalent to the Clear Sweeps button on the front panel.

COMMAND SYNTAX :ACQuire:CSWeep

EXAMPLE The following command clears acquisition sweep.

Command message: :ACQuire:CSWeep

ACQ:CSW

:ACQuire:INTerpolation

Command/Query

DESCRIPTION The command sets the method of interpolation.

The query returns the current method of interpolation.

COMMAND SYNTAX :ACQuire:INTerpolation <state>

<state>:= {ON|OFF}

ON selects sinx/x (sinc) interpolation

OFF selects linear interpolation

QUERY SYNTAX :ACQuire:INTerpolation?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables sinusoidal interpretation.

Command message:

:ACQuire:INTerpolation ON

ACQ:INT ON

Query message:

ACQ:INT?

Response message:

ON

:ACQuire:MMANagement

Command/Query

DESCRIPTION

The command sets the memory mode of the oscilloscope.

The query returns the current memory mode of the oscilloscope.

COMMAND SYNTAX

:ACQuire:MMANagement < mem_mode>

<mem_mode>:= {AUTO|FSRate|FMDepth}

- AUTO mode maintain the maximum sampling rate, and automatically set the memory depth and sampling rate according to the time base.
- FSRate mode is Fixed Samling Rate, maintain the specified sampling rate and automatically set the memory depth according to the time base.
- FMDepth mode is Fixed Memory Depth, the oscilloscope automatically sets the sampling rate according to the storage depth and time base.

QUERY SYNTAX

:ACQuire:MMANagement?

RESPONSE FORMAT

<mem mode>

< mem_mode>:= {AUTO|FSRate|FMDepth}

EXAMPLE

The following command sets the memory mode of the oscilloscope as FMDepth.

Command message:

:ACQuire:MMANagement FMDepth

ACQ:MMAN FMD

Query message:

ACQ:MMAN?

Response message:

FMDepth

:ACQuire:MODE

Command/Query

DESCRIPTION

The command sets the acquisition mode of the oscilloscope.

The query returns the current acquisition mode of the oscilloscope.

COMMAND SYNTAX

:ACQuire:MODE <mode type>

<mode_type>:= {YT|XY|ROLL}

- YT mode plots amplitude (Y) vs. time (T)
- XY mode plots channel X vs. channel Y, commonly referred to as a Lissajous curve
- Roll mode plots amplitude (Y) vs. time (T) as in YT mode, but begins to write the waveforms from the right-hand side of the display. This is similar to a "strip chart" recording and is ideal for slow events that happen a few times/second.

QUERY SYNTAX

:ACQuire:MODE?

RESPONSE FORMAT

<mode type>

<mode_type>:= {YT|XY|ROLL}

EXAMPLE

The following command sets the mode of the oscilloscope as YT.

Command message:

:ACQuire:MODE YT ACQ:MODE YT

Query message:

ACQ:MODE?

Response message:

ΥT

:ACQuire:MDEPth

Command/Query

DESCRIPTION

The command sets the maximum memory depth.

The query returns the maximum memory depth.

COMMAND SYNTAX

:ACQuire:MDEPth <memory_size>

<memory_size>:= Varies by model. See the table below for
details:

Model	<memory_size></memory_size>
SDS5000X	Single Channel {250k 1.25M 2.5M 12.5M 25M 125M 250M}
	Dual-Channel {125k 625k 1.25M 6.25M 12.5M 62.5M 125M}
SDS2000X Plus	Single Channel {20k 200k 2M 20M 200M}
	Dual-Channel {10k 100k 1M 10M 100M}
SDS6000 Pro SDS6000A	1G Model Single Channel {1.25k 5k 25k 50k 250k 500k 2.5M 5M 12.5M 125M 250M}
	1G Model Dual-Channel {1.25k 2.5k 12.5k 25k 125k 250k 1.25M 2.5M 12.5M 62.5M 125M}
	2G Model {2.5k 5k 25k 50k 250k 500k 2.5M 5M 12.5M 25M 50M 125M 250 M 250M 500M}
SDS6000L	{2.5k 5k 25k 50k 250k 500k 2.5M 5M 12.5M 25M 50M 125M 250 M 250M 500M}
SHS800X SHS1000X	Single Channel {12k 120k 1.2M 12M}
	Dual-Channel {6k 60k 600k 6M}
SDS2000X HD	Single Channel {20k 200k 2M 20M 200M}
	Dual-Channel {10k 100k 1M 10M 100M}
SDS800X HD SDS1000X HD	Single Channel {10k 100k 1M 10M 100M}
	Dual-Channel {10k 100k 1M 10M 50M}
	Four-Channel {10k 100k 1M 10M 25M}

SDS7000A	{1k 5k 10k 50k 100k 500k 1M 5M 10M 50M 100M 500M 1G}
SDS3000X HD	Single Channel {2k 10k 20k 100k 200k 1M 10M 20M 100M 200M 400M}
	Dual-Channel {2k 10k 20k 100k 200k 1M 10M 20M 100M 200M}
	Quad-Channel {2k 10k 20k 100k 200k 1M 10M 20M 100M}

Note:

- For the definition of single and dual channel mode, please refer to the user manual.
- Turn on digital channels or set the acquisition type to AVERage/ERES or set the acquisition mode to roll, will limit the memory depth.

QUERY SYNTAX :ACQuire:MDEPth?

RESPONSE FORMAT <memory_size>

The following command sets the memory depth to 125 Mpts

for the SDS5000X series.

Command message:

:ACQuire:MDEPth 125M ACQ:MDEP 125M

Query message: :ACQ:MDEP?

Response message:

125M

RELATED COMMANDS :ACQuire:MODE

:ACQuire:TYPE

:DIGital

:ACQuire:NUMACq

Query

DESCRIPTION The query returns the number of waveform acquisitions that

have occurred since starting acquisition. This value is reset to zero when any acquisition, horizontal, or vertical arguments

that affect the waveform are changed.

QUERY SYNTAX :ACQuire:NUMACq?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following query returns that 350 acquisitions have

occurred since starting acquisition.

Query message: :ACQuire:NUMACq? ACQ:NUMAC?

Response message:

350

:ACQuire:POINts

Query

DESCRIPTION The query returns the number of sampled points of the current

waveform on the screen.

QUERY SYNTAX :ACQuire:POINts?

RESPONSE FORMAT <point>

<point>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command queries the points of current

acquisition.

Query message: ACQ:POIN?

Response message:

1.25E+08

:ACQuire:RESolution

Command/Query

DESCRIPTION The command sets the ADC resolution for SDS2000X Plus

oscilloscope.

The query returns the ADC resolution for SDS2000X Plus

oscilloscope.

COMMAND SYNTAX :ACQuire:RESolution <bit>

<bit>:= {8Bits|10Bits}

QUERY SYNTAX :ACQuire:RESolution?

RESPONSE FORMAT

<b

<bit>:= {8Bits|10Bits}

EXAMPLE The following command sets the ADC resolution to 10Bits.

Command message:

:ACQuire:RESolution 10Bits

ACQ:RES 10B

Query message:

ACQ:RES?

Response message:

10Bits

:ACQuire:SEQuence

Command/Query

DESCRIPTION The command enables or disables sequence acquisition

mode.

The query returns whether the current sequence acquisition

switch is on or not.

COMMAND SYNTAX :ACQuire:SEQuence <state>

<state>:= {ON|OFF}

QUERY SYNTAX :ACQuire:SEQuence?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on sequence acquisition mode.

Command message: :ACQuire:SEQuence ON

ACQ:SEQ ON

Query message: ACQ:SEQ?

Response message:

ON

RELATED COMMANDS :ACQuire:SEQuence:COUNt

:ACQuire:SEQuence:COUNt

Command/Query

DESCRIPTION The command sets the number of memory segments to

acquire. The maximum number of segments may be limited by

the memory depth of your oscilloscope.

The query returns the current count setting.

COMMAND SYNTAX :ACQuire:SEQuence:COUNt <count>

<count>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value varies from the models and the current timebase, see the user manual for

details.

QUERY SYNTAX : ACQuire:SEQuence:COUNt?

RESPONSE FORMAT <count value>

<count_value>:= Value in NR1 format, including an integer and

no decimal point, like 1.

EXAMPLE The following command sets the count of sequence segment

as 5.

Command message:

:ACQuire:SEQuence:COUNt 5

ACQ:SEQ:COUN 5

Query message: ACQ:SEQ:COUN?

Response message:

5

RELATED COMMANDS :ACQuire:SEQuence

:ACQuire:SRATe

Command/Query

DESCRIPTION The command set the sampling rate when in the fixed

sampling rare mode.

The query returns the current sampling rate.

COMMAND SYNTAX :ACQuire:SRATe <rate>

<type>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. If the set value is greater than the settable value, it will automatically match to the settable value.

QUERY SYNTAX :ACQuire:SRATe?

RESPONSE FORMAT <sample rate>

<sample_rate>:= Value in NR3 format, including a decimal

point and exponent, like 1.23E+2.

EXAMPLE The following command sets the current sampling rate.

Command message:

:ACQuire:SRATe 5.00E9 ACQ:SRAT 5.00E9

Query message: ACQ:SRAT?

Response message:

5.00E+09

:ACQuire:TYPE

Command/Query

DESCRIPTION

The command selects the type of data acquisition that is to take place.

The query returns the current acquisition type.

COMMAND SYNTAX

:ACQuire:TYPE <type>

<type>:= {NORMal|PEAK|AVERage[,<times>]|ERES[,<bits>]}

<times>:= {4|16|32|64|128|256|512|1024|2048|4096|8192}

<bits>:= {0.5|1.0|1.5|2.0|2.5|3.0|3.5|4.0}

- NORMal sets the oscilloscope to normal mode.
- PEAK sets the oscilloscope to peak detect mode.
- AVERage sets the oscilloscope acquisition to averaging mode. You can set the number of averages by sending the command followed by a numeric integer value <times>.
- ERES sets the oscilloscope to the enhanced resolution mode. This is essentially a digital boxcar filter and is used to reduce noise at slower sweep speeds. You can set the enhanced bits by sending the command followed by the <bits>.

Note:

The AVERage|ERES type is not available when in sequence mode (:ACQuire:SEQuence ON).

QUERY SYNTAX

:ACQuire:TYPE?

RESPONSE FORMAT

<type>

<type>:= {NORMal|PEAK|AVERage[,<times>]|ERES[,<bits>]}

<times>:= {4|16|32|64|128|256|512|1024|2048|4096|8192},
when <type> is AVERage.

<bits>:= {0.5|1.0|1.5|2.0|2.5|3.0|3.5|4.0} when <type> is ERES.

EXAMPLE

The following command sets the acquisition type as AVERage, and the average number as 16.

Command message:

:ACQuire:TYPE AVERage,16
ACQ:TYPE AVER,16

Query message: ACQ:TYPE?

Response message:

AVERage, 16

CHANnel Commands

The :CHANnel<n> subsystem commands control the analog channels. Channels are independently programmable for offset, probe, coupling, bandwidth limit, inversion, and more functions. The channel index (1, 2, 3, or 4) specified in the command selects the analog channel that is affected by the command.

- :CHANnel:REFerence
- :CHANnel<n>:BWLimit
- :CHANnel<n>:COUPling
- :CHANnel<n>:IMPedance
- + :CHANnel<n>:INVert
- :CHANnel<n>:LABel
- :CHANnel<n>:LABel:TEXT
- :CHANnel<n>:OFFSet
- :CHANnel<n>:PROBe
- :CHANnel<n>:SCALe
- :CHANnel<n>:SKEW
- :CHANnel<n>:SWITch
- :CHANnel<n>:UNIT
- :CHANnel<n>:VISible

:CHANnel:REFerence

Command/Query

DESCRIPTION

This command sets the strategy for the offset value change in the vertical direction when the vertical scale is changed.

The query returns the current vertical reference strategy.

COMMAND SYNTAX

:CHANnel:REFerence <type>

<type>:= {OFFSet|POSition}

- OFFset means when the vertical scale is changed, the vertical offset remains fixed. As the vertical scale is changed, the waveform expands/contracts around the main X-axis of the display.
- POSition means when the vertical scale is changed, the vertical offset remains fixed to the grid position on the display. As the vertical scale is changed, the waveform expands/contracts around the position of the vertical ground position on the display.

QUERY SYNTAX

:CHANnel:REFerence?

RESPONSE FORMAT

<type>

<type>:= {OFFSet|POSition}

EXAMPLE

The following command sets the strategy of the vertical reference to offset.

Command message:

:CHANnel:REFerence OFFSet

CHAN:REF OFFS

Query message:

CHAN:REF?

Response message:

OFFSet

:CHANnel<n>:BWLimit

Command/Query

DESCRIPTION

The command enables or disables the bandwidth-limiting low-pass filter. If the bandwidth filter is on, it will filter the signal to reduce noise and other unwanted high frequency components. When the filter is on, the bandwidth of the specified channel is limited to approximately 20 MHz or 200 MHz.

The guery returns the current setting of the low-pass filter.

COMMAND SYNTAX

:CHANnel<n>:BWLimit <bwlimit>

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

- FULL sets the oscilloscope bandwidth to full.
- ◆ 20M enables the 20 MHz bandwidth filter.
- 200M enables the 200 MHz bandwidth filter.

QUERY SYNTAX

:CHANnel<n>:BWLimit?

RESPONSE FORMAT

<bul><bul>bwlimit>

bwlimit>:= {FULL|20M|200M}

EXAMPLE

The following command sets the bandwidth filter of Channel 1 to 20 MHz.

Command message:

:CHANnel1:BWLimit 20M CHAN1:BWL 20M

Query message:

CHAN1:BWL?

Response message:

20M

:CHANnel<n>:COUPling

Command/Query

DESCRIPTION The command selects the coupling mode of the specified input

channel.

The query returns the coupling mode of the specified channel.

COMMAND SYNTAX :CHANnel<n>:COUPling <coupling mode>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<coupling_mode>:= {DC|AC|GND}

DC sets the channel coupling to DC.

AC sets the channel coupling to AC.

GND sets the channel coupling to Ground.

QUERY SYNTAX :CHANnel<n>: COUPling?

RESPONSE FORMAT <coupling_mode>

<coupling_mode>:= {DC|AC|GND}

EXAMPLE The following command sets the coupling mode of Channel 1

to AC.

Command message:

:CHANnel1:COUPling AC

CHAN1:COUP AC

Query message:

CHAN1:COUP?

Response message:

AC

:CHANnel<n>:IMPedance

Command/Query

DESCRIPTION The command sets the input impedance of the selected

channel. There are two impedance values available, depending on model. They are 1 MOhm and 50.

The query returns the current impedance setting of the

selected channel.

COMMAND SYNTAX :CHANnel<n>:IMPedance <impedance>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<impedance>:= {ONEMeg|FIFTy}

ONEMeg means 1 Mohm.

• FIFTy means 50 ohm.

Note:

When set to FIFTy, the range of legal values set by

the :CHAN<n>:SCAL commands is limited to less than 1 V.

QUERY SYNTAX :CHANnel<n>:IMPedance?

RESPONSE FORMAT <impedance>

<impedance>:= {ONEMeg|FIFTy}

EXAMPLE The following command sets the impedance of Channel 2 to 1

MOhm.

Command message:

:CHANnel2:IMPedance ONEMeg

CHAN2:IMP ONEM

Query message:

CHAN2:IMP?

Response message:

ONEMeg

RELATED COMMANDS :CHANnel<n>:SCALe

:CHANnel<n>:INVert

Command/Query

DESCRIPTION The command selects whether or not to mathematically invert

the input signal for the specified channel. This is a

mathematical operation and does not change the polarity of

the input signal with reference to ground.

The query returns the current state of the channel inversion.

COMMAND SYNTAX :CHANnel<n>:INVert <state>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {ON|OFF}

ON enables channel inversion.

Off disables channel inversion.

QUERY SYNTAX :CHANnel<n>:INVert?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command inverts the display of Channel 2.

Command message:

:CHANnel2:INVert ON CHAN2:INV ON

Query message: CHAN2:INV?

Response message:

ON

:CHANnel<n>:LABel

Command/Query

DESCRIPTION The command is to turn the specified channel label on or off.

The query returns the label associated with a particular

channel.

COMMAND SYNTAX :CHANnel<n>:LABel <state>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {ON|OFF}

• ON enables the channel label.

• OFF disables the channel label.

QUERY SYNTAX :CHANnel<n>:LABel?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the label of Channel 1.

Command message: :CHANnel1:LABel ON

CHAN1:LAB ON

Query message:

CHAN1:LAB?

Response message:

ON

:CHANnel<n>:LABel:TEXT

Command/Query

DESCRIPTION The command sets the selected channel label to the string that

follows. Setting a label for a channel also adds the name to the label list in non-volatile memory (replacing the oldest label in

the list)

The query returns the current label text of the selected

channel.

COMMAND SYNTAX :CHANnel<n>:LABel:TEXT <qstring>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<qstring>:= Quoted string of ASCII text. The length of the

string is limited to 20.

Note:

All characters will be automatically converted to uppercase.

QUERY SYNTAX :CHANnel<n>:LABel:TEXT?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the label text of Channel 2 to

"VOUT".

Command message:

:CHANnel2:LABel:TEXT "VOUT"

CHAN2:LAB:TEXT "VOUT"

Query message:

CHAN2:LAB:TEXT?

Response message:

"VOUT"

RELATED COMMANDS :CHANnel<n>:LABel

:CHANnel<n>:OFFSet

Command/Query

DESCRIPTIONThe command allows adjustment of the vertical offset of the

specified input channel. The maximum ranges depend on the

fixed sensitivity setting.

The query returns the offset value of the specified channel.

COMMAND SYNTAX :CHANnel<n>:OFFSet <offset_value>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<offset value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

Note:

The range of legal values varies with the value set by

the :CHANnel<n>:SCALe commands.

QUERY SYNTAX :CHANnel<n>:OFFSet?

RESPONSE FORMAT <offset_value>

<offset_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

EXAMPLE The following command sets the offset of Channel 2 to -3.8 V.

Command message:

:CHANnel2:OFFSet -3.8E+00

CHAN2:OFFS -3.8E+00

Query message:

CHAN2:OFFS?

Response message:

-3.8E+00

RELATED COMMANDS :CHANnel<n>:SCALe

:CHANnel<n>:PROBe

Command/Query

DESCRIPTION

The command specifies the probe attenuation factor for the selected channel. This command does not change the actual input sensitivity of the oscilloscope. It changes the reference constants for scaling the display factors, for making automatic measurements, and for setting trigger levels.

The query returns the current probe attenuation factor for the selected channel.

COMMAND SYNTAX

:CHANnel<n>:PROBe <attenuation>[,<value>]

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<attenuation>:= {DEFault|VALue}

- DEFault means set to the default value 1X.
- VALue means set to the <value>.

<value>:= Probe attenuation ratio in NR3 format when
<attenuation> is VALue, and the range is [1E-6, 1E6].

QUERY SYNTAX

:CHANnel<n>:PROBe?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the attenuation factor of Channel 1 to 100:1. To ensure the data matches the true signal voltage values, the physical probe attenuation must match the scope attenuation values for that input channel.

Command message:

:CHANnel1:PROBe VALue,1.00E+02 CHAN1:PROB VAL,1.00E+02

Query message:

CHAN1:PROB?

Response message:

1.00E+02

RELATED COMMANDS

:CHANnel<n>:SCALe :CHANnel<n>:OFFSet

:CHANnel<n>:SCALe

Command/Query

DESCRIPTION The command sets the vertical sensitivity in Volts/div. If the

probe attenuation is changed, the scale value is multiplied by

the probe's attenuation factor.

The query returns the current vertical sensitivity of the

specified channel.

COMMAND SYNTAX :CHANnel<n>:SCALe <scale>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The range of value varies from the models and the bandwidth

of the model. See the data sheet for details.

QUERY SYNTAX :CHANnel<n>:SCALe?

RESPONSE FORMAT <scale>

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The return value is affected by probe.

EXAMPLE The following command sets the vertical sensitivity of

Channel 1 to 50 mV/div

Command message:

:CHANnel1:SCALe 5.00E-02 CHAN1:SCAL 5.00E-02

Query message:

CHAN1:SCAL?

Response message:

5.00E-02

5.00E-01 (when the probe attenuation ratio is 10:1)

RELATED COMMANDS :CHANnel<n>:PROBe

:CHANnel<n>:SKEW

Command/Query

DESCRIPTIONThe command sets the channel-to-channel skew factor for the

specified channel.

The query returns the current probe skew setting for the

selected channel.

COMMAND SYNTAX :CHANnel<n>:SKEW <skew_value>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<skew_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2. The range of the value is

[-1.00E-07, 1.00E-07].

QUERY SYNTAX :CHANnel<n>:SKEW?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the skew of Channel 1 to 1.52 ns.

Command message:

:CHANnel1:SKEW 1.52E-09 CHAN1:SKEW 1.52E-09

Query message:

CHAN1:SKEW?

Response message:

1.52E-09

:CHANnel<n>:SWITch

Command/Query

DESCRIPTION The command turns the display of the specified channel on or

off.

The query returns current status of the selected channel.

COMMAND SYNTAX :CHANnel<n>:SWITch <state>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {OFF|ON}

QUERY SYNTAX :CHANnel<n>:SWITch?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command displays Channel 1.

Command message: :CHANnel1:SWITch ON CHAN1:SWIT ON

Query message: CHAN1:SWIT?

Response message:

ON

:CHANnel<n>:UNIT

Command/Query

DESCRIPTION The command change the unit of input signal of specified

channel. There is voltage (V) and current (A) two choice to

choose for each channel.

The query returns the current unit of the concerned channel.

COMMAND SYNTAX :CHANnel<n>:UNIT <unit>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<unit>:= $\{V|A\}$

Note:

The related parameter units are changed to the selected unit after processing this command. This also effects measurement results, cursors value, channel sensitivity, and trigger level.

QUERY SYNTAX :CHANnel<n>:UNIT?

RESPONSE FORMAT <unit>

<unit>:= $\{V|A\}$

EXAMPLE The following command sets the unit of Channel 1 to A.

Command message:

:CHANnel1:UNIT A CHAN1:UNIT A

Query message:

CHAN1:UNIT?

Response message:

Α

:CHANnel<n>:VISible

Command/Query

DESCRIPTION The command is used to whether display the waveform of the

specified channel or not. Different from the

command :CHANnel<n>:SWITch, it sets the state on the

display, and the latter sets the physical switch.

The guery returns whether the waveform display function of

the selected channel is on or off.

COMMAND SYNTAX :CHANnel<n>:VISible <display_state>

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<display_state>:= {ON|OFF}

QUERY SYNTAX :CHANnel<n>:VISible?

RESPONSE FORMAT <display_state>

<display state>:= {ON|OFF}

EXAMPLE The following command sets the display of Channel 2 to ON.

Command message:

:CHANnel2:VISible ON

CHAN2:VIS ON

Query message:

CHAN2:VIS?

Response message:

ON

COUNter Commands

The :COUNter subsystem commands control the counter function.

- :COUNter
- :COUNter:CURRent
- :COUNter:LEVel
- :COUNter:MODE
- :COUNter:SOURce
- :COUNter:STATistics
- :COUNter:STATistics:RESet
- :COUNter:STATistics:VALue
- :COUNter:TOTalizer:GATE
- :COUNter:TOTalizer:GATE:LEVel
- :COUNter:TOTalizer:GATE:SLOPe
- :COUNter:TOTalizer:GATE:TYPE
- :COUNter:TOTalizer:RESet
- :COUNter:TOTalizer:SLOPe

:COUNter

Command/Query

DESCRIPTION This command sets the switch of the counter function.

The query returns the current state of the counter.

COMMAND SYNTAX :COUNter <state>

<state>:= {ON|OFF}

QUERY SYNTAX :COUNter?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables counter function.

Command message:

:COUNter ON COUN ON

Query message:

COUN?

Response message:

ON

:COUNter:CURRent

Query

DESCRIPTION The query returns the current counter value.

QUERY SYNTAX :COUNter:CURRent?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The counter has 7-digit frequency measurement accuracy. To

return a higher precision value, please use the

command:FORMat:DATA.

EXAMPLE The following command returns the counter value when the

mode of the counter is Frequency.

Query message:

COUN:CURR?

Response message:

1.00E+03

:COUNter:LEVel

Command/Query

DESCRIPTION This command specifies the level of the counter.

The query returns the current level of the counter.

COMMAND SYNTAX :COUNter: LEVel <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS2000X Plus SDS2000X HD SDS1000X HD SDS800X HD SDS3000X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :COUNter:LEVel?

RESPONSE FORMAT <value>:

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the level of the counter to 0.5V.

Command message:

:COUNter:LEVel 5.00E-01 COUN:LEV 5.00E-01

Query message: COUN:LEV?

Response message:

5.00E-01

:COUNter:MODE

Command/Query

DESCRIPTION This command selects the mode of the counter.

The query returns the current mode of the counter.

COMMAND SYNTAX :COUNter: MODE <type>

<type>:= {FREQuency|PERiod|TOTalizer}

FREQuency means the average frequency over a set period

 PERiod means the reciprocal of the average frequency over a set period

TOTalizer means the value of cumulative count

QUERY SYNTAX :COUNter:MODE?

RESPONSE FORMAT <type>:= {FREQuency|PERiod|TOTalizer}

EXAMPLE The following command sets the mode of the counter as

Frequency.

Command message:

:COUNter:MODE FREQuency

COUN:MODE FREQ

Query message: COUN:MODE?

Response message:

FREQuency

:COUNter:SOURce

Command/Query

DESCRIPTION This command specifies the source of the counter source.

The query returns the current source of the counter.

COMMAND SYNTAX :COUNter: SOURce <source>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :COUNter:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>}

EXAMPLE The following command sets the source of the counter as

Channel 1.

Command message:

:COUNter:SOURce C1

COUN:SOUR C1

Query message:

COUN:SOUR?

Response message:

C1

:COUNter:STATistics

Command/Query

DESCRIPTION This command sets the switch of the counter statistics

function.

The query returns the current state of the counter statistics.

COMMAND SYNTAX :COUNter: STATistics <state>

<state>:= {ON|OFF}

Note:

This command can only be used when the counter mode is

FREQuency or PERriod.

QUERY SYNTAX :COUNter:STATistics?

RESPONSE FORMAT <state>:

<state>:= {ON|OFF}

EXAMPLE The following command sets the switch of the counter statistic

to ON.

Command message:

:COUNter:STATistics ON

COUN:STAT ON

Query message:

COUN:STAT?

Response message:

ON

:COUNter:STATistics:RESet

Command

DESCRIPTION This command resets the statistics results of the counter

statistics function.

COMMAND SYNTAX :COUNter: STATistics:RESet

Note:

This command can only be used when the counter mode is

FREQuency or PERiod.

The following command resets the statistics results of the counter statistics function. **EXAMPLE**

Command message:

:COUNter:STATistics:RESet

:COUN:STAT:RES

RELATED COMMANDS :COUNter:STATistics

:COUNter:STATistics:VALue

Query

DESCRIPTION

The query returns the the counter statistics. This query can only be used when the counter mode is FREQuency or PERiod.

QUERY SYNTAX

:COUNter:STATistics:VALue?

RESPONSE FORMAT

<current>,<mean>,<min>,<max>,<stdev>,<count>

<current>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. Indicates the current value for statistics.

<mean>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. Indicates the mean value for statistics.
<min>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. Indicates the minimum value for statistics.

<max>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. Indicates the maximum value for statistics.

<stdev>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. Indicates the standard deviation for statistics.

<count>:= Value in NR1 format, including an integer and no decimal point, like 1. Indicates the number of statistics.

Note:

- When the switch of the counter statistics is OFF, return "OFF".
- The counter has 7-digit frequency measurement accuracy. To return a higher precision value, please use the command :FORMat:DATA.

EXAMPLE

The following command returns the counter statistics when the mode of the counter is Frequency.

Query message:

COUN:STAT:VAL?

Response message:

1.00E+03,1.00E+03,1.00E+03,1.00E+03,1.52E-02,312

:COUNter:TOTalizer:GATE

Command/Query

DESCRIPTION The command sets the state of the counter gate when the

mode is TOTalizer.

This query returns the current state of the counter gate.

COMMAND SYNTAX :COUNter:TOTalizer:GATE <state>

<state>:= {ON|OFF}

QUERY SYNTAX :COUNter:TOTalizer:GATE?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets the gate setting switch to on.

Command message:

:COUNter:TOTalizer:GATE ON

COUN:TOT:GATE ON

Query message: COUN:TOT:GATE?

Response message:

ON

:COUNter:TOTalizer:GATE:LEVel

Command/Query

DESCRIPTION The command sets the value of the gate level.

This query returns the value of the gate level.

COMMAND SYNTAX :COUNter: TOTalizer:GATE:LEVel <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :COUNter: TOTalizer:GATE:LEVel?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the style of counter gate to level.

Command message:

:COUNter:TOTalizer:GATE:LEVel 5.00E-1

COUN:TOT:GATE:LEV 5.00E-1

Query message:

COUN:TOT:GATE:LEV?

Response message:

5.00E-1

:COUNter:TOTalizer:GATE:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the gate source when the gate

type is AEDGe, and sets the polarity of the gate source when

the gate type is LEVel.

This query returns the slope or polarity of the gate source.

COMMAND SYNTAX :COUNter: TOTalizer:GATE:SLOPe <slope>

<slope>:= {RISing|FALLing}

QUERY SYNTAX :COUNter: TOTalizer:GATE:SLOPe?

RESPONSE FORMAT <slope>

<slope>:= {RISing|FALLing}

EXAMPLE The following command sets the slope of the counter gate to

RISing when the gate type is AEDGe.

Command message:

:COUNter:TOTalizer:GATE:SLOPe RISing

COUN:TOT:GATE:SLOP RIS

Query message:

COUN:TOT:GATE:SLOP?

Response message:

RISing

:COUNter:TOTalizer:GATE:TYPE

Command/Query

DESCRIPTION The command selects the type of the counter gate.

This query returns the current style of the counter gate.

COMMAND SYNTAX :COUNter: TOTalizer:GATE:TYPE <style>

<style>:= {LEVel|AEDGe}

QUERY SYNTAX :COUNter: TOTalizer:GATE:TYPE?

RESPONSE FORMAT <style>

<style>:= {LEVel|AEDGe}

EXAMPLE The following command sets the style of counter gate to level.

Command message:

:COUNter:TOTalizer:GATE:TYPE LEVel

COUN:TOT:GATE:TYPE LEV

Query message:

COUN:TOT:GATE:TYPE?

Response message:

LEVel

:COUNter:TOTalizer:RESet

Command

DESCRIPTION This command resets the results of the counter totalizer

function.

COMMAND SYNTAX :COUNter: TOTalizer:RESet

EXAMPLE The following command resets the results of the counter

totalizer function.

Command message:

:COUNter:TOTalizer:RESet

:COUN:TOT:RES

:COUNter:TOTalizer:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the counter totalizer source.

This query returns the slope of the counter totalizer source.

COMMAND SYNTAX :COUNter: TOTalizer:SLOPe <slope>

<slope>:= {RISing|FALLing}

QUERY SYNTAX :COUNter: TOTalizer:SLOPe?

RESPONSE FORMAT <slope>

<slope>:= {RISing|FALLing}

EXAMPLE The following command sets the slope of counter totalizer

source to RISing.

Command message:

:COUNter:TOTalizer:SLOPe RISing

COUN:TOT:SLOP RIS

Query message: COUN:TOT:SLOP?

Response message:

RISing

CURSor Commands

The CURSor command subsystem commands control the cursor measurement function and allows for manual cursor, tracking cursor, and measurement cursor settings.

The Siglent oscilloscope supports two forms of cursor: single group cursor and multiple cursors. The command systems for the two forms of cursor are different, please use the correct commands according to the cursor form.

• :CURSor

:CURSor:TAGStyle

:CURSor:XREFerence

:CURSor:YREFerence

Single Group Cursor Commands

Multiple Cursors Commands

:CURSor

Command/Query

DESCRIPTION The command chooses whether to open the cursor.

This command query returns the current state of the cursor.

COMMAND SYNTAX :CURSor <state>

<state>:= {ON|OFF}

QUERY SYNTAX :CURSor?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables cursor function.

Command message:

:CURSor ON CURS ON

Query message:

CURS?

Response message:

ON

:CURSor:TAGStyle

Command/Query

DESCRIPTION The command selects the tag type of the cursor value.

The query returns the current tag type of cursor value.

COMMAND SYNTAX :CURSor:TAGStyle <type>

<type>:= {FIXed|FOLLowing}

QUERY SYNTAX :CURSor:TAGStyle?

RESPONSE FORMAT <type>

<type>:= {FIXed|FOLLowing}

EXAMPLE The following command sets the tag type of cursor value to

FIXed.

Command message: :CURSor:TAGStyle FIXed

CURS:TAGS FIXed

Query message: CURS:TAGS?

Response message:

FIXed

:CURSor:XREFerence

Command/Query

DESCRIPTION This command specifies the expansion strategy around the

cursor X.

The query returns the expansion strategy of the cursor X.

COMMAND SYNTAX :CURSor:XREFerence <type>

<type>:= {DELay|POSition}

DELay means that the cursor value is fixed, and the onscreen cursor position changes for different timebase values.

POSition means that the cursor position is fixed, and does not change at any time. Timebase changes cause an expansion or contraction of the waveforms around the

cursor position.

QUERY SYNTAX :CURSor:XREFerence?

RESPONSE FORMAT <type>

< type >:= {DELay|POSition}

EXAMPLE The following command sets the type of the X cursor reference

to delay.

Command message:

:CURSor:XREFerence DELay

CURS:XREF DEL

Query message:

CURS:XREF?

Response message:

DELay

:CURSor:YREFerence

Command/Query

DESCRIPTION This command specifies the expansion strategy of the Y

cursor.

The query returns the expansion strategy of the Y cursor.

COMMAND SYNTAX :CURSor:YREFerence <type>

<type>:= {OFFSet|POSition}

 OFFSet means that the cursor value is fixed, and the cursor position moves with vertical scale changes. The cursors expand or contract if the vertical scale changes.

 POSition means that the cursor position is fixed, and does not change at any time.

QUERY SYNTAX :CURSor:YREFerence?

RESPONSE FORMAT <type>

<type>:= {OFFSet|POSition}

EXAMPLE The following command sets the type of the Y cursor reference

to offset.

Command message:

:CURSor:YREFerence OFFSet

CURS:YREF OFFS

Query message: CURS:YREF?

Response message:

OFFSet

Single Group Cursor Commands

The single group cursor only supports 4 cursor lines: X1, X2, Y1, Y2. In each cursor mode, set or query cursor parameters using the commands in this section.

:CURSor:IXDelta

Query

DESCRIPTION The query returns the current value of cursor 1/(X1-X2).

QUERY SYNTAX :CURSor:IXDelta?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE Query message:

CURS:IXD?

Response message:

5.7143E+00

RELATED COMMANDS :CURSor:X1

:CURSor:X2 :CURSor:XDELta

:CURSor:MITem

Command/Query

DESCRIPTION The command specifies the measure item of the cursors,

when the cursor mode is measure.

The query returns the current measure item of cursor.

COMMAND SYNTAX :CURSor:MITem <type>,<source1>[,<source2>]

<type>:= the type of the selected measurement item in advanced measurement,see the table Description of

Parameters for details.

<source1>:= the source of the selected measurement item in advanced measurement. The optional parameters are the

same as the measurement source.

<source2>:= when the type is CH Delay type, source2 needs to be specified. The optional parameters are the same as the

measurement source

QUERY SYNTAX :CURSor:MITem?

RESPONSE FORMAT <a hre

EXAMPLE The following command sets the mesure item of the cursor to

PKPK(C2), when the advanced measurement is turned on.

Command message:

:CURSor:MITem PKPK,C2 CURS:MIT PKPK,C2

Query message:

CURS:MIT?

Response message:

PKPK,C2

:CURSor:MODE

Command/Query

DESCRIPTION The command specifies the mode of cursor, and the type of

cursor to be displayed when the cursor mode is manual.

The query returns the current mode of cursor.

COMMAND SYNTAX :CURSor:MODE <type>

<type>:= {TRACk|MANual[,<mode>]|MEASure}

<mode>:= $\{X|Y|XY\}$

MANul means the manual cursors

TRACk means the track cursors

MEASure means the measure cursors

QUERY SYNTAX :CURSor:MODE?

RESPONSE FORMAT <type>

<type>:= {TRACk|MANual[,<mode>]}

 $mode := \{X|Y|XY\}$

EXAMPLE The following command sets the cursor type to manual X,

when the cursor mode is manual.

Command message:

:CURSor:MODE MANual,X CURS:MODE MAN,X

Query message:

CURS:MODE?

Response message:

MANual,X

:CURSor:SOURce1

Command/Query

DESCRIPTION This command specifies the source of the cursor source 1.

The guery returns the current source of the cursor source 1.

COMMAND SYNTAX :CURSor:SOURce1 <source>

<source>:=

{C<n>|Z<n>|F<x>|M<m>|REF<r>|DIGital|HISTOGram}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an

integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

 $r>:= \{A|B|C|D\}$

Note:

When the cursor mode is a TRACk, the source cannot be set

to HISTOGram or DIGital.

QUERY SYNTAX :CURSor:SOURce1?

RESPONSE FORMAT <source>

<source>:=

{C<n>|Z<n>|F<x>|M<m>|REF<r>|DIGital|HISTOGram}

EXAMPLE The following command sets the source of the cursor source 1

as Channel 1.

Command message:

:CURSor:SOURce1 C1 CURS:SOUR1 C1

Query message:

CURS:SOUR1?

Response message:

C1

RELATED COMMANDS :CURSor:SOURce2

:CURSor:SOURce2

Command/Query

DESCRIPTION This command specifies the source of the cursor source 2.

The guery returns the current source of the cursor source 2.

COMMAND SYNTAX :CURSor:SOURce2 <source>

<source>:=

{C<n>|Z<n>|F<x>|M<m>|REF<r>|DIGital|HISTOGram}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an

integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

 $r>:= \{A|B|C|D\}$

Note:

When the cursor mode is a TRACk, the source cannot be set

to HISTOGram or DIGital.

QUERY SYNTAX :CURSor:SOURce2?

RESPONSE FORMAT <source>

<source>:=

{C<n>|Z<n>|F<x>|M<m>|REF<r>|DIGital|HISTOGram}

EXAMPLE The following command sets the source of the cursor source 2

as Channel 1.

Command message:

:CURSor:SOURce2 C1 CURS:SOUR2 C1

Query message:

CURS:SOUR2?

Response message:

C1

RELATED COMMANDS :CURSor:SOURce1

:CURSor:X1

Command/Query

DESCRIPTION This command specifies the position of the cursor X1.

The query returns the current position of the cursor X1.

COMMAND SYNTAX :CURSor:X1 <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is [-horizontal_grid/2*timebase+horizontal_delay, horizontal_grid/2*timebase+horizontal_delay].

QUERY SYNTAX :CURSor:X1?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the value of the cursor X1 to 1

us.

Command message: :CURSor:X1 1.00E-06

CURS:X1 1.00E-06

Query message:

CURS:X1?

Response message:

1.00E-06

RELATED COMMANDS :CURSor:X2

:CURSor:X2

Command/Query

DESCRIPTION This command specifies the position of the cursor X2.

The query returns the current position of the cursor X2.

COMMAND SYNTAX :CURSor:X2 <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is [-horizontal_grid/2*timebase+horizontal_delay, horizontal_grid/2*timebase+horizontal_delay].

QUERY SYNTAX :CURSor:X2?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the value of the cursor X2 to 1

us.

Command message:

:CURSor:X2 1.00E-06 CURS:X2 1.00E-06

Query message:

CURS:X2?

Response message:

1.00E-06

RELATED COMMANDS :CURSor:X1

:CURSor:XDELta :CURSor:IXDelta

:CURSor:XDELta

Query

DESCRIPTION The query returns the horizontal difference between cursor X1

and cursor X2.

QUERY SYNTAX :CURSor:XDELta?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command returns the current value of the cursor

X2-X1.

Query message: CURS:XDEL?

Response message:

1.750E-01

RELATED COMMANDS :CURSor:X1

:CURSor:X2

:CURSor:IXDelta

:CURSor:Y1

Command/Query

DESCRIPTION This command specifies the position of the cursor Y1.

The query returns the current position of the cursor Y1.

COMMAND SYNTAX :CURSor:Y1 <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is [-vertical_grid/2*vertical_scale-vertical_offset, vertical_grid/2*vertical_scale-vertical_offset].

QUERY SYNTAX :CURSor:Y1?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the value of the cursor Y1 to 12

V

Command message:

:CURSor:Y1 1.20E+01 CURS:Y1 1.20E+01

Query message:

CURS:Y1?

Response message:

1.20E+01

RELATED COMMANDS :CURSor:Y2

:CURSor:YDELta

:CURSor:Y2

Command/Query

DESCRIPTION This command specifies the position of the cursor Y2.

The query returns the current position of the cursor Y2.

COMMAND SYNTAX :CURSor:Y2 <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is [-vertical_grid/2*vertical_scale-vertical_offset, vertical_grid/2*vertical_scale-vertical_offset]

QUERY SYNTAX :CURSor:Y2?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the value of the cursor Y2 to 10

V

Command message:

:CURSor:Y2 1.00E+01 CURS:Y2 1.00E+01

Query message:

CURS:Y2?

Response message:

1.00E+01

RELATED COMMANDS :CURSor:Y1

:CURSor:YDELta

:CURSor:YDELta

Query

DESCRIPTION The query returns the vertical difference between the cursor

Y1 and cursor Y2.

QUERY SYNTAX :CURSor:YDELta?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command returns the current value of the cursor

Y2-Y1.

Query message: CURS:YDEL?

Response message:

1.80E+01

RELATED COMMANDS :CURSor:Y1

:CURSor:Y2

Multiple Cursors Commands

The multiple cursors supports 5 cursor modes: Manual X, Manual Y, Track, Measure, and XY. Multiple cursor lines are supported in each mode, and different parameters can be set for each cursor line. Set or query cursor parameters through commands in this section.

:CURSor:MANual:X<n>

Command/Query

DESCRIPTION The command chooses whether to open the specified manual

X cursor.

The query returns the current state of the specified manual X

cursor.

COMMAND SYNTAX :CURSor:MANual:X<n> <state>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to X and defines the X cursor that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :CURSor:MANual:X<n>?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables manual X2.

Command message: :CURSor:MANual:X2 ON

CURS:MAN:X2 ON

Query message: CURS:MAN:X2?

Response message:

ON

RELATED COMMANDS :CURSor

:CURSor:MANual:X<n>:COLor

Command/Query

DESCRIPTION

This command sets the color of the specified manual X cursor.

The guery returns the color of the specified manual X cursor.

COMMAND SYNTAX

:CURSor:MANual:X<n>:COLor <color>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to X and defines the X cursor that is affected by the command.

<color>:= {DEFault|DELTa|CUSTom[,<string>]}

- DEFault means color of cursor source.
- DELTa means synchronizing with the color of the reference cursor.
- CUSTom means set to the <string>.

<string>:= Quoted string of hexadecimal RGB color code.

QUERY SYNTAX

:CURSor:MANual:X<n>:COLor?

RESPONSE FORMAT

<string>

<string>:= Quoted string of hexadecimal RGB color code.

EXAMPLE

The following command sets the color of manual X2 to the color of the cursor source.

Color of the Cursor Source

Command message:

:CURSor:MANual:X2:COLor DEFault

CURS:MAN:X2:COL DEF

Query message:

CURS:MAN:X2:COL?

Response message:

"#ffff00"

RELATED COMMANDS

:CURSor:MANual:X<n>:SOURce :CURSor:MANual:X<n>:DTCursor

:CURSor:MANual:X<n>:DFOLlow

Command/Query

DESCRIPTION The command chooses whether to open the fixed relative

position between the specified manual X cursor and the

reference cursor.

The query returns the current state of the fixed relative position

between the specified manual X cursor and the reference

cursor.

COMMAND SYNTAX :CURSor:MANual:X<n>:DFOLlow <state>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to X and defines the X cursor that is affected by the

command.

<state>:= {ON|OFF}

Note:

Only when the reference cursor source is not NONE can it be

set.

QUERY SYNTAX :CURSor:MANual:X<n>:DFOLlow?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets the manual X2 to follow the

reference cursor movement status as ON.

Command message:

:CURSor:MANual:X2:DFOLlow ON

CURS:MAN:X2:DFOL ON

Query message:

CURS:MAN:X2:DFOL?

Response message:

ON

RELATED COMMANDS :CURSor:MANual:X<n>:DTCursor

:CURSor:MANual:X<n>:DTCursor

Command/Query

DESCRIPTION This command sets the reference cursor for the specified

manual X cursor.

The query returns the reference cursor for the specified

manual X cursor.

COMMAND SYNTAX :CURSor:MANual:X<n>:DTCursor <source>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to X and defines the X cursor that is affected by the

command.

<source>:= {MX<m>|TRACK<t>|NONE}

♦ <m>:= 1 to (# manual X cursor index) in NR1 format.

<t>:= 1 to (# track cursor index) in NR1 format

NONE means not set reference cursor.

QUERY SYNTAX :CURSor:MANual:X<n>:DTCursor?

RESPONSE FORMAT <source>

<source>:= {MX<m>|TRACK<t>|NONE}

EXAMPLE The following command sets the reference cursor for manual

X2 to manual X1.

Command message:

:CURSor:MANual:X2:DTCursor MX1

Command/Query

DESCRIPTION The command chooses whether to open the specified

measure cursor.

This query returns the current state of the specified measure

cursor.

COMMAND SYNTAX :CURSor:MEASure<n> <state>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to MEASure and defines the measure cursor that is

affected by the command.

<state>:= {ON|OFF}

QUERY SYNTAX :CURSor:MEASure<n>?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables measure cursor MEA2.

Command message:

:CURSor:MEASure2 ON

CURS:MEAS2 ON

Query message:

CURS:MEAS2?

Response message:

ON

RELATED COMMANDS :CURSor

:CURSor:MEASure<n>:COLor

Command/Query

DESCRIPTION This command sets the color of the specified measure cursor.

The query returns the color of the specified measure cursor.

COMMAND SYNTAX :CURSor:MEASure<n>:COLor <color>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to MEASure and defines the measure cursor that is affected by

the command.

<color>:= {DEFault|CUSTom[,<string>]}

DEFault means color of cursor source.

CUSTom means set to the <string>.

<string>:= Quoted string of hexadecimal RGB color code.

QUERY SYNTAX :CURSor:MEASure<n>:COLor?

RESPONSE FORMAT <string>

<string>:= Quoted string of hexadecimal RGB color code.

EXAMPLE The following command sets the color of measure cursor

MEA2 to the color of the cursor source.

Command message:

:CURSor:MEASure2:COLor DEFault

CURS:MEAS2:COL DEF

Query message:

CURS:MEAS2:COL?

Response message:

"#ffff00"

RELATED COMMANDS :CURSor:MEASure<n>

Command/Query

DESCRIPTION This command sets the label for the specified measure cursor

MEA.

The query returns the label for the specified measure cursor

MEA

COMMAND SYNTAX :CURSor:MEASure<n>:LABel <state>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to MEASure and defines the measure cursor that is

affected by the command.

<state>:= {DEFault|CUSTom[,<string>]}

DEFault means that the label is empty.

CUSTom means set to <string>.

<string>:= Quoted string of ASCII text. The length of the string

is limited to 20.

QUERY SYNTAX :CURSor:MEASure<n>:LABel?

RESPONSE FORMAT <string>

<string>:= Quoted string of ASCII text.

EXAMPLE The following command sets the label of measure cursor

MEA2 as the default label.

Command message:

:CURSor:MEASure2:LABel DEFault

CURS:MEAS2:LAB DEF

Query message:

CURS:MEAS2:LAB?

Response message:

"MEA2"

RELATED COMMANDS :CURSor:MEASure<n>

:CURSor:MEASure<n>:MITem

Command/Query

DESCRIPTION

This command sets the measurement items for the specified

measurement cursor MEA.

The query to return the measurement items for the specified

measurement cursor MEA.

COMMAND SYNTAX

:CURSor:MEASure<n>:MITem <type>,<src1>[,<src2>]

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to MEASure and defines the measure cursor that is

affected by the command.

<type>:= The parameters are the same as the measurement

type, see Table "Description of Parameters" for details.

<source1>:= the source of the selected measurement item in

advanced measurement. The optional parameters are the

same as the measurement source.

<source2>:= when the type is CH Delay type, source2 needs
to be engelised. The entired parenters are the same as the

to be specified. The optional parameters are the same as the

measurement source

QUERY SYNTAX

:CURSor:MEASure<n>:MITem?

RESPONSE FORMAT

<type>,<source1>[,<source2>]

EXAMPLE

When advanced measurement is turned on, the following command sets the measurement item of the measurement

cursor MEA2 to PKPK (C2).

Command message:

:CURSor:MEASure2:MITem PKPK,C2

CURS:MEAS2:MIT PKPK.C2

Query message:

CURS:MEAS2:MIT?

RELATED COMMANDS :CURSor:XY:Y<n>

:CURSor:XY:Y<n>:DTCursor

:CURSor:XY:Y<n>:POSition

Command/Query

DESCRIPTION This command sets the position of the specified XY cursor Y.

The guery returns the position of the specified XY cursor Y.

COMMAND SYNTAX :CURSor:XY:Y<n>:POSition <value>

<n>:= 1 to (# cursor index) in NR1 format, is attached as a suffix to Y and defines the XY Y cursor that is affected by the

command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+00.

QUERY SYNTAX :CURSor:XY:Y<n>:POSition?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+00

EXAMPLE The following command sets the position of XY cursor Y2 to

1V.

Command message:

:CURSor:XY:Y2:POSition 1.00E+00

CURS:XY:Y2:POS 1.00E+00

Query message: CURS:XY:Y2:POS?

Response message:

1.00E+00

RELATED COMMANDS :CURSor:XY:Y<n>

DECode Commands

The :DECode subsystem commands control the basic decode functions of the oscilloscope.

:DECode

Command/Query

DESCRIPTION The command sets the state of the decode function.

This query returns the current status of the decode function.

COMMAND SYNTAX :DECode <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DECode?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the decode function.

Command message:

:DECode ON DEC ON

Query message:

DEC?

Response message:

ON

:DECode:LIST

Command/Query

DESCRIPTION The command enables or disables the list of decode result.

This query returns the current switch state of the decode list.

COMMAND SYNTAX :DECode:LIST <state>

<state>:= {OFF|D1|D2}
 D1 means bus 1
 D2 means bus 2

QUERY SYNTAX :DECode:LIST?

RESPONSE FORMAT <state>

<state>:= {OFF|D1|D2}

EXAMPLE The following command enables the D1 list.

Command message:

:DECode:LIST D1
DEC:LIST D1

Query message:

DEC:LIST?

Response message:

D1

:DECode:LIST:LINE

Command/Query

DESCRIPTION The command sets the number of lines displayed in the

decoding list on the screen.

This query returns the number of lines displayed in the

decoding list.

COMMAND SYNTAX :DECode:LIST:LINE <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of value is [1, 7].

QUERY SYNTAX :DECode:LIST:LINE?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of lines displayed by

decoding to 6.

Command message:

:DECode:LIST:LINE 6
DEC:LIST:LINE 6

Query message: DEC:LIST:LINE?

Response message:

6

:DECode:LIST:SCRoll

Command/Query

DESCRIPTION The command sets the selected line when the decode list is

turned on.

This query returns the selected line of the decode list.

COMMAND SYNTAX :DECode:LIST:SCRoll <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

QUERY SYNTAX :DECode:LIST:SCRoll?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the third line 3 selected when

decoding the display.

Command message:

:DECode:LIST:SCRoll 3

DEC:LIST:SCR 3

Query message:

DEC:LIST:SCR?

Response message:

3

RELATED COMMANDS :DECode:LIST

:DECode:LIST:LINE

:DECode:LIST<n>:RESult

Query

DESCRIPTION This query returns the result of the specified decoding list.

QUERY SYNTAX :DECode:LIST<n>:RESult?

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

RESPONSE FORMAT <ascii_text>

The data is separated by commas, and each frame is

separated by LF(\n). The data value is related to the format set

by ":DECode:BUS<n>:FORMat". The first row of data is

header description information.

EXAMPLE The following command sets the decoding protocol of bus 1 to

IIC.

Query message:

DEC:BUS1:RES?

Response message:

UART,\sTime,\sRx,\sRx\sErr,\sTx,\sTx\sErr\s

1,-93.7501us,0x4C, ls, ls, ls

2,-93.7501us, \s,\s,0x4C,\s

3,-4.20950us,0x45,\s,\s,\s

4,-4.20950us,\s,\s,0x45,\s 5,85.4178us,,Less\sLength,\s,\s

6,85.4178us,\s,\s,,Less\sLength

:DECode:BUS<n>

Command/Query

DESCRIPTION The command sets the status of the decode bus.

This query returns the current status of the decode bus.

COMMAND SYNTAX :DECode:BUS<n> <state>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<state>:= {ON|OFF}.

QUERY SYNTAX :DECode:BUS<n>?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets decode bus 1 on.

Command message:

:DECode:BUS1 ON DEC:BUS1 ON

Query message:

DEC:BUS1?

Response message:

ON

RELATED COMMANDS :DECode

:DECode:BUS<n>:COPY

Command

DESCRIPTION

The command synchronizes the decoding settings with the trigger settings.

COMMAND SYNTAX

:DECode:BUS<n>:COPY <operation>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus that is affected by the command.

<operation>:= {FROMtrigger|TOTRigger}.

- FROMtrigger means copy trigger settings to the decoding bus.
- TOTRigger means copy decoding settings to trigger.

EXAMPLE

The following command copies the decode settings on bus 1 to the trigger settings.

Command message:

:DECode:BUS1:COPY FROMtrigger

DEC:BUS1:COPY FROM

:DECode:BUS<n>:FORMat

Command/Query

DESCRIPTION The command selects the display format of the specified

decode bus.

This query returns the display format of the specified decode

bus.

COMMAND SYNTAX :DECode:BUS<n>:FORMat <format>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<format>:= {BINary|DECimal|HEX|ASCii}

QUERY SYNTAX :DECode:BUS<n>:FORMat?

RESPONSE FORMAT <format>

<format>:= {BINary|DECimal|HEX|ASCii}

EXAMPLE The following command selects the display format of the bus 1

as HEX.

Command message:

:DECode:BUS1:FORMat HEX DEC:BUS1:FORM HEX

Query message: DEC:BUS1:FORM?

Response message:

HEX

:DECode:BUS<n>:PROTocol

Command/Query

DESCRIPTION The command selects the protocol of the specified bus.

This query returns the protocol of the specified bus.

COMMAND SYNTAX :DECode:BUS<n>:PROTocol protocol>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

col>:=

{IIC|SPI|UART|CAN|LIN|FLEXray|CANFd|IIS|M1553|SENT|MA

Nchester|A429|USB20}

QUERY SYNTAX :DECode:BUS<n>:PROTocol?

RESPONSE FORMAT <p

col>:=

{IIC|SPI|UART|CAN|LIN|FLEXray|CANFd|IIS|M1553}

EXAMPLE The following command sets the decoding protocol of bus 1 to

IIC.

Command message:

:DECode:BUS1:PROTocol IIC

DEC:BUS1:PROT IIC

Query message: DEC:BUS1:PROT?

Response message:

IIC

:DECode:BUS<n>:RESult

Query

DESCRIPTION This query returns the result of the specified decoding bus.

When there is a large amount of decoded data on the screen, the display space of the decoding bus is limited, and the returned results will also be incomplete. If you need to obtain

full decoded data, use the

command :DECode:LIST<n>:RESult.

QUERY SYNTAX :DECode:BUS<n>:RESult?

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus

that is affected by the command.

RESPONSE FORMAT <ascii_text>

The data is separated by commas, and each frame is

separated by semicolons and automatically wrapped. The data

value is related to the format set by

":DECode:BUS<n>:FORMat". The first row of data is header

description information.

EXAMPLE The following command sets the decoding protocol of bus 1 to

IIC.

Query message: DEC:BUS1:RES?

Response message:

lin,sync,id,parity,data,checksum; 0x55,0x06,0,0x54\s0x5F,0x46;

:DECode:BUS<n>:IIC Commands

The :DECode:BUS<n>:IIC subsystem commands control the IIC decode settings of the specified bus.

- :DECode:BUS<n>:IIC:RWBit
- :DECode:BUS<n>:IIC:SCLSource
- :DECode:BUS<n>:IIC:SCLThreshold
- :DECode:BUS<n>:IIC:SDASource
- :DECode:BUS<n>:IIC:SDAThreshold

:DECode:BUS<n>:IIC:RWBit

Command/Query

DESCRIPTION This command selects whether the decoding result includes

read bit and write bit.

This query returns whether the decoding result includes read

and write bits.

COMMAND SYNTAX :DECode:BUS<n>:IIC:RWBit <state>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<state>:= {ON|OFF}.

QUERY SYNTAX :DECode:BUS<n>:IIC:RWBit?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command selects to enable read and write bits

on bus 1.

Command message:

:DECode:BUS1:IIC:RWBit ON

DEC:BUS1:IIC:RWB ON

Query message:

DEC:BUS1:IIC:RWB?

Response message:

ON

:DECode:BUS<n>:IIC:SCLSource

Command/Query

DESCRIPTION The command selects the SCL source of the IIC bus.

This query returns the current SCL source of the IIC bus.

COMMAND SYNTAX :DECode:BUS<n>:IIC:SCLSource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>}.

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DECode:BUS<n>:IIC:SCLSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the SCL source of the IIC on

bus 1 as C1.

Command message:

:DECode:BUS1:IIC:SCLSource C1

DEC:BUS1:IIC:SCLS C1

Query message:

DEC:BUS1:IIC:SCLS?

Response message:

C1

RELATED COMMANDS :DECode:BUS<n>:IIC:SCLThreshold

:DECode:BUS<n>:IIC:SDASource

:DECode:BUS<n>:IIC:SCLThreshold

Command/Query

DESCRIPTION The command sets the threshold of the SCL on IIC bus.

This guery returns the current threshold of the SCL on IIC bus.

COMMAND SYNTAX :DECode:BUS<n>:IIC:SCLThreshold <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

QUERY SYNTAX :DECode:BUS<n>:IIC:SCLThreshold?

RESPONSE FORMAT <value>

EXAMPLE

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The fo

The following command sets the threshold of the SCL to 1 V on

bus 1.

Command message:

:DECode:BUS1:IIC:SCLThreshold 1.00E+00

DEC:BUS1:IIC:SCLT 1.00E+00

Query message:

DEC:BUS1:IIC:SCLT?

Response message:

1.00E+00

RELATED COMMANDS :DECode:BUS<n>:IIC:SCLSource

:DECode:BUS<n>:IIC:SDASource

Command/Query

DESCRIPTION The command selects the SDA source of the IIC bus.

This guery returns the current SDA source of the IIC bus.

COMMAND SYNTAX :DECode:BUS<n>:IIC:SDASource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DECode:BUS<n>:IIC:SDASource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the SDA source of the IIC on

bus 1 as C1.

Command message:

:DECode:BUS1:IIC:SDASource C1

DEC:BUS1:IIC:SDAS C1

Query message:

DEC:BUS1:IIC:SDAS?

Response message:

C1

RELATED COMMANDS :DECode:BUS<n>:IIC:SDAThreshold

:DECode:BUS<n>:IIC:SCLSource

:DECode:BUS<n>:IIC:SDAThreshold

Command/Query

DESCRIPTION The command sets the threshold of the SDA on IIC bus.

This guery returns the current threshold of the SDA on IIC bus.

COMMAND SYNTAX :DECode:BUS<n>:IIC:SDAThreshold <value>

> <n>:= {1|2}, is attached as a suffix to BUS and defines the bus that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |

:DECode:BUS<n>:SPI:BITorder

Command/Query

DESCRIPTION The command sets the bit order of the SPI bus.

This query returns the current bit order of the SPI bus.

COMMAND SYNTAX :DECode:BUS<n>:SPI:BITorder <order>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<order>:= {LSB|MSB}.

QUERY SYNTAX :DECode:BUS<n>:SPI:BITorder?

RESPONSE FORMAT <order>

<order>:= {LSB|MSB}

EXAMPLE The following command sets bit order of the SPI on BUS 1 to

LSB.

Command message:

:DECode:BUS1:SPI:BITorder LSB

DEC:BUS1:SPI:BIT LSB

Query message: DEC:BUS1:SPI:BIT?

Response message:

LSB

:DECode:BUS<n>:SPI:CLKSource

Command/Query

DESCRIPTION The command selects the CLK source of the SPI bus.

This query returns the current CLK source of the SPI bus.

COMMAND SYNTAX :DECode:BUS<n>:SPI:CLKSource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>}.

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DECode:BUS<n>:SPI:CLKSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the CLK source of the SPI on

bus 1 as C1.

Command message:

:DECode:BUS1:SPI:CLKSource C1

DEC:BUS1:SPI:CLKS C1

RELATED COMMANDS :DECode:BUS<n>:SPI:CLKSource

:DECode:BUS<n>:SPI:CSTYpe

Command/Query

DESCRIPTION

The command sets the chip selection type of the SPI bus.

This query returns the current chip selection type of the SPI

bus.

COMMAND SYNTAX

:DECode:BUS<n>:SPI:CSTYpe <type>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus that is affected by the command.

<type>:= {NCS|CS|TIMeout[,<time>]}

- CS means set to chip select state.
- NCS means set to non-chip select state.
- TIMeout indicates set to clock timeout status.

<time>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value is [1.00E-07, 5.00E-03].

QUERY SYNTAX

:DECode:BUS<n>:SPI:CSTYpe?

RESPONSE FORMAT

<type>

<type>:= {NCS|CS|TIMeout[,<time>]}

<time>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the chip selection type of the SPI on bus 1 to CS.

Command message:

:DECode:BUS1:SPI:CSTYpe CS DEC:BUS1:SPI:CSTY CS

Query message:

DEC:BUS1:SPI:CSTY?

Response message:

CS

:DECode:BUS<n>:SPI:DLENgth

Command/Query

DESCRIPTION The command sets the data length of the SPI bus.

This query returns the current data length of the SPI bus.

COMMAND SYNTAX :DECode:BUS<n>:SPI:DLENgth <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [4, 32].

QUERY SYNTAX :DECode:BUS<n>:SPI:DLENgth?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data length of the SPI on bus

1 to 5.

Command message:

:DECode:BUS1:SPI:DLENgth 5

DEC:BUS1:SPI:DLEN 5

Query message:

DEC:BUS1:SPI:DLEN?

Response message:

5

:DECode:BUS<n>:SPI:LATChedge

Command/Query

DESCRIPTION The command selects the sampling edge of CLK on SPI bus.

This query returns the sampling edge of CLK on SPI bus.

COMMAND SYNTAX :DECode:BUS<n>:SPI:LATChedge <slope>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<slope>:= {RISing|FALLing}

QUERY SYNTAX :DECode:BUS<n>:SPI:LATChedge?

RESPONSE FORMAT <slope>

<slope>:= {RISing|FALLing}

EXAMPLE The following command sets the threshold judgment condition

of CLK on bus 1 to RISing.

Command message:

:DECode:BUS1:SPI:LATChedge RISing

DEC:BUS1:SPI:LATC RIS

Query message:

DEC:BUS1:SPI:LATC?

Response message:

RISing

:DECode:BUS<n>:SPI:MISOSource

Command/Query

DESCRIPTION The command selects the MISO source of the SPI bus.

This query returns the current MISO source of the SPI bus.

COMMAND SYNTAX :DECode:BUS<n>:SPI:MISOSource <source>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>|DIS}

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1. For example, C1 selects

analog channel 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an integer and no decimal point, like 1. For example, D1 selects

digital channel 1.

DIS means no source selected.

QUERY SYNTAX :DECode:BUS<n>:SPI:MISOSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>|DIS}

EXAMPLE The following command sets the MISO source of the SPI on

bus 1 as C1.

Command message:

:DECode:BUS1:SPI:MISOSource C1

DEC:BUS1:SPI:MISOS C1

Query message:

DEC:BUS1:SPI:MISOS?

Response message:

C1

RELATED COMMANDS :DECode:BUS<n>:SPI:MISOThreshold

:DECode:BUS<n>:SPI:MISOThreshold

Command/Query

DESCRIPTION The command sets the threshold of the MISO on SPI bus.

This guery returns the current threshold of the MISO.

COMMAND SYNTAX :DECode:BUS<n>:SPI:MISOThreshold <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

QUERY SYNTAX :DECode:BUS<n>:SPI:MISOThreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE The following command sets the threshold of the MISO to 1 V

on bus 1.

Command message:

:DECode:BUS1:SPI:MISOThreshold 1.00E+00

DEC:BUS1:SPI:MISOT 1.00E+00

Query message:

DEC:BUS1:SPI:MISOT? Response message:

1.00E+00

RELATED COMMANDS :DECode:BUS<n>:SPI:MISOSource

:DECode:BUS<n>:SPI:MOSISource

Command/Query

DESCRIPTION The command selects the MOSI source of the SPI bus.

This query returns the current MOSI source of the SPI bus.

COMMAND SYNTAX :DECode:BUS<n>:SPI:MOSISource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>|DIS}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

DIS means no source selected

QUERY SYNTAX :DECode:BUS<n>:SPI:MOSISource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>|DIS}

EXAMPLE The following command selects the MOSI source of the SPI on

bus 1 as C1.

Command message:

:DECode:BUS1:SPI:MOSISource C1

DEC:BUS1:SPI:MOSIS C1

Query message:

DEC:BUS1:SPI:MOSIS?

Response message:

- :DECode:BUS<n>:UART:TXSource
- :DECode:BUS<n>:UART:

:DECode:BUS<n>:UART:BAUD

Command/Query

DESCRIPTION The command sets the baud rate of the UART bus.

This guery returns the current baud rate of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:BAUD <baud>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<baud>:=

{600bps|1200bps|2400bps|4800bps|9600bps|19200bps|38400

bps|57600bps|115200bps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [300,

20000000].

QUERY SYNTAX :DECode:BUS<n>:UART:BAUD?

RESPONSE FORMAT

<b

<baud>:=

{600bps|1200bps|2400bps|4800bps|9600bps|19200bps|38400

bps|57600bps|115200bps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the baud rate of the UART to

9600bps on bus 1.

Command message:

:DECode:BUS1:UART:BAUD 9600bps DEC:BUS1:UART:BAUD 9600bps

Query message:

DEC:BUS1:UART:BAUD?

Response message:

9600bps

:DECode:BUS<n>:UART:BITorder

Command/Query

DESCRIPTION The command sets the bit order of the UART bus.

This query returns the current bit order of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:BITorder <order>

<n>= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<order>:= {LSB|MSB}

QUERY SYNTAX :DECode:BUS<n>:UART:BITorder?

RESPONSE FORMAT <order>

<order>:= {LSB|MSB}

LSB is Least Significant Bit order

◆ MSB is Most Significant Bit order

EXAMPLE The following command sets bit order of the UART bus on bus

1 to LSB.

Command message:

:DECode:BUS1:UART:BITorder LSB

DEC:BUS1:UART:BIT LSB

Query message:

DEC:BUS1:UART:BIT?

Response message:

LSB

:DECode:BUS<n>:UART:DLENgth

Command/Query

DESCRIPTION The command sets the data length of the UART bus.

This query returns the current data length of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:DLENgth <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of value is [5, 8].

QUERY SYNTAX :DECode:BUS<n>:UART:DLENgth?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data length of the UART to 5

on bus 1.

Command message:

:DECode:BUS1:UART:DLENgth 5

DEC:BUS1:UART:DLEN 5

Query message:

DEC:BUS1:UART:DLEN?

Response message:

5

:DECode:BUS<n>:UART:IDLE

Command/Query

DESCRIPTION The command sets the idle level of the UART bus.

This query returns the current idle level of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:IDLE <idle>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<idle>:= {LOW|HIGH}

QUERY SYNTAX :DECode:BUS<n>:UART:IDLE?

RESPONSE FORMAT <idle>

<idle>:= {LOW|HIGH}

LOW means that the idle voltage value is low

HIGH means that the idle voltage value is high

EXAMPLE The following command sets the idle level of the UART on bus

1 to low.

Command message:

:DECode:BUS1:UART:IDLE LOW DEC:BUS1:UART:IDLE LOW

Query message:

DEC:BUS1:UART:IDLE?

Response message:

LOW

:DECode:BUS<n>:UART:PARity

Command/Query

DESCRIPTION The command sets the parity check of the UART bus.

This query returns the current parity check of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:PARity <parity>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<parity>:= {NONE|ODD|EVEN|MARK|SPACe}

QUERY SYNTAX :DECode:BUS<n>:UART:PARity?

<parity>:= {NONE|ODD|EVEN|MARK|SPACe}

EXAMPLE The following command sets the parity check of the UART on

bus 1 to NONE.

Command message:

:DECode:BUS1:UART:PARity NONE

DEC:BUS1:UART:PAR NONE

Query message:

DEC:BUS1:UART:PAR?

Response message:

NONE

:DECode:BUS<n>:UART:RXSource

Command/Query

DESCRIPTION The command sets the RX source of the UART bus.

This query returns the current RX source of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:RXSource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>|DIS}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

DIS means no source selected

QUERY SYNTAX :DECode:BUS<n>:UART:RXSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>|DIS}

EXAMPLE The following command sets the RX source of the UART on

bus 1 as C1.

Command message:

:DECode:BUS1:UART:RXSource C1

DEC:BUS1:UART:RXS C1

Query message:

DEC:BUS1:UART:RXS?

Response message:

C1

:DECode:BUS<n>:UART:RXTHreshold

Command/Query

DESCRIPTION The command sets the threshold of RX on UART bus.

This guery returns the current threshold of RX on UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:RXTHreshold <value>

> <n>:= {1|2}, is attached as a suffix to BUS and defines the bus that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

QUERY SYNTAX :DECode:BUS<n>:UART:RXTHreshold?

RESPONSE FORMAT <value>

> <value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE The following command sets the threshold of the RX to 1 V on

bus 1.

Command message:

:DECode:BUS1:UART:RXTHreshold 1.00E+00

DEC:BUS1:UART:RXTH 1.00E+00

Query message:

DEC:BUS1:UART:RXTH? Response message:

1.00E+00

RELATED COMMANDS :DECode:BUS<n>:UART:RXSource

:DECode:BUS<n>:UART:STOP

Command/Query

DESCRIPTION The command sets the length of the stop bit on UART bus.

This query returns the current length of the stop bit on UART

bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:STOP <bit>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

 $\text{bit} := \{1|1.5|2\}$

QUERY SYNTAX :DECode:BUS<n>:UART:STOP?

RESPONSE FORMAT

<b

<bit>:= {1|1.5|2}

EXAMPLE The following command sets the current length of the stop bit

to 1 on bus 1.

Command message:

:DECode:BUS1:UART:STOP 1 DEC:BUS1:UART:STOP 1

Query message:

DEC:BUS1:UART:STOP?

Response message:

1

:DECode:BUS<n>:UART:TXSource

Command/Query

DESCRIPTION The command sets the TX source of the UART bus.

This query returns the current TX source of the UART bus.

COMMAND SYNTAX :DECode:BUS<n>:UART:TXSource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>|DIS}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.DIS means no source selected

QUERY SYNTAX :DECode:BUS<n>:UART:TXSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>|DIS}

EXAMPLE The following command sets the TX source of the UART on

bus 1 as C1.

Command message:

:DECode:BUS1:UART:TXSource C1

DEC:BUS1:UART:TXS C1

Query message:

DEC:BUS1:UART:TXS?

Response message:

C1

RELATED COMMANDS :DECode:BUS<n>:UART:

that is affected by the command.

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DECode:BUS<n>:LIN:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the source of the LIN on bus 1

as C1.

Command message:

:DECode:BUS1:LIN:SOURce C1 DEC:BUS1:LIN:SOUR C1

Query message:

DEC:BUS1:LIN:SOUR?

Response message:

C1

RELATED COMMANDS :DECode:BUS<n>:LIN:THReshold

:DECode:BUS<n>:LIN:THReshold

Command/Query

DESCRIPTION The command sets the threshold of the source on LIN bus.

This query returns the current threshold of the source on LIN

bus.

COMMAND SYNTAX :DECode:BUS<n>:LIN:THReshold <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

QUERY SYNTAX :DECode:BUS<n>:LIN:THReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the threshold of the LIN source to

1 V on bus 1.

Command message:

:DECode:BUS1:LIN:THReshold 1.00E+00

DEC:BUS1:LIN:THR 1.00E+00

Query message:

DEC:BUS1:LIN:THR? Response message:

Command/Query

DESCRIPTION The command selects the audio variant for IIS bus.

This query returns the current audio variant for IIS bus.

COMMAND SYNTAX :DECode:BUS<n>:IIS:AVARiant <type>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<type>:= {I2S|LJ|RJ}

I2S justified.

LJ is left justified.

• RL is right justified.

QUERY SYNTAX :DECode:BUS<n>:IIS:AVARiant?

RESPONSE FORMAT <type>

<type>:= {I2S|LJ|RJ}

EXAMPLE The following command sets the audio variable of the IIS on

bus 1 to RJ.

Command message:

:DECode:BUS1:IIS:AVARiant RJ

DEC:BUS1:IIS:AVAR RJ

Query message:

DEC:BUS1:IIS:AVAR?

Response message:

RJ

:DECode:BUS<n>:IIS:BCLKSource

Command/Query

DESCRIPTION The command selects the BCLK source of the IIS bus.

This query returns the current BCLK source of the IIS bus.

COMMAND SYNTAX :DECode:BUS<n>:IIS:BCLKSource <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DECode:BUS<n>:IIS:BCLKSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the BCLK source of IIS on bus

1 as C1.

Command message:

:DECode:BUS1:IIS:BCLKSource C1

DEC:BUS1:IIS:BCLKS C1

Query message:

DEC:BUS1:IIS:BCLKS?

Response message:

RELATED COMMANDS :DECode:BUS<n>:IIS:BCLKSource

:DECode:BUS<n>:IIS:BITorder

Command/Query

DESCRIPTION The command sets the bit order for the IIS bus.

This query returns the current bit order for the IIS bus.

COMMAND SYNTAX :DECode:BUS<n>:IIS:BITorder <order>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<order>:= {LSB|MSB}

◆ LSB is Least Significant Bit.

MSB is Most Significant Bit.

QUERY SYNTAX :DECode:BUS<n>:IIS:BITorder?

RESPONSE FORMAT <order>

<order>:= {LSB|MSB}

EXAMPLE The following command sets bit order for the IIS on bus 1 to

LSB.

Command message:

:DECode:BUS1:IIS:BITorder LSB

DEC:BUS1:IIS:BIT LSB

Query message:

DEC:BUS1:IIS:BIT?

Response message:

LSB

:DECode:BUS<n>:IIS:DLENgth

Command/Query

DESCRIPTION The command sets the data bits for the IIS bus.

This query returns the current data bits for the IIS bus.

COMMAND SYNTAX :DECode:BUS<n>:IIS:DLENgth <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [1, 32].

QUERY SYNTAX :DECode:BUS<n>:IIS:DLENgth?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data bits for the IIS to 5 on

bus 1.

Command message:

:DECode:BUS1:IIS:DLENgth 5

DEC:BUS1:IIS:DLEN 5

Query message:

DEC:BUS1:IIS:DLEN?

Response message:

5

SDS2000X HD | [-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset] |

QUERY SYNTAX :DECode:BUS<n>:IIS:WSTHreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE The following command sets the threshold of the WS to 1 V on

bus 1.

Command message:

:DECode:BUS1:IIS:WSTHreshold 1.00E+00

DEC:BUS1:IIS:WSTH 1.00E+00

Query message:

DEC:BUS1:IIS:WSTH?

Response message:

1.00E+00

RELATED COMMANDS :DECode:BUS<n>:IIS:WSSource

:DECode:BUS<n>:M1553 Commands [Option]

The :DECode:BUS<n>:M1553 subsystem commands control the M1553 decode settings of the specified bus.

• :DECode:BUS<n>:M1553:LTHReshold

:DECode:BUS<n>:M1553:SOURce

:DECode:BUS<n>:M1553:UTHReshold

:DECode:BUS<n>:M1553:LTHReshold

Command/Query

DESCRIPTION

The command sets the lower threshold of the M1553 source.

This query returns the current lower threshold of the M1553 source.

COMMAND SYNTAX

:DECode:BUS<n>:M1553:LTHReshold <value>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details

| Model | Value Range |
|---|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro
SDS6000A
SDS6000L | [-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset] |
| SDS5000X
SDS3000X HD
SDS2000X Plus
SDS2000X HD | [-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset] |

Note:

The lower threshold value cannot be greater than the upper threshold value set by the command: DECode:BUS<n>:M1553:UTHReshold.

QUERY SYNTAX

:DECode:BUS<n>:M1553:LTHReshold?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the lower threshold of the M1553

source to 1 V on bus 1. Command message:

:DECode:BUS1:M1553:LTHReshold 1.00E+00

DEC:BUS1:M1553:LTHR 1.00E+00

Query message:

DEC:BUS1:M1553:LTHR? Response message:

RELATED COMMANDS :DECode:BUS<n>:SENT:SOURce

:DECode:BUS<n>:SENT:FORMat

Command/Query

DESCRIPTION The command selects the message format of the SENT bus.

This query returns the message format of the SENT bus.

COMMAND SYNTAX :DECode:BUS<n>:SENT:FORMat <format>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<format>:= {NIBBles|FSIGnal|SSERial|ESERial}

QUERY SYNTAX :DECode:BUS<n>:SENT:FORMat?

RESPONSE FORMAT <format>

<format>:= {NIBBles|FSIGnal|SSERial|ESERial}

EXAMPLE The following command selects the message format of the

SENT bus of the bus 1 as NIBBles.

Command message:

:DECode:BUS1:SENT:FORMat NIBBles

DEC:BUS1:SENT:FORM NIBB

Query message:

DEC:BUS1:SENT:FORM?

Response message:

NIBBles

:DECode:BUS<n>:SENT:CLOCk

Command/Query

COMMAND SYNTAX

DESCRIPTION The command sets the clock period (tick) time of the SENT

bus.

This query returns the current clock period of the SENT bus.

:DECode:BUS<n>:SENT:CLOCk <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is [500E-09,

300E-06]

QUERY SYNTAX :DECode:BUS<n>:SENT:CLOCk?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the clock cycle of SENT bus on

the bus 1 to 1us.

Command message:

:DECode:BUS1:SENT:CLOCk 1.00E-06 DEC:BUS1:SENT:CLOC 1.00E-06

Query message:

DEC:BUS1:SENT:CLOC?

Response message:

1.00E-06

:DECode:BUS<n>:SENT:TOLerance

Command/Query

DESCRIPTION The command sets the clock percent tolerance of the SENT

bus.

This query returns the current clock tolerance of the SENT bus.

COMMAND SYNTAX :DECode:BUS<n>:SENT:TOLerance <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [1, 25].

QUERY SYNTAX :DECode:BUS<n>:SENT:TOLerance?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the tolerance of the SENT on bus

1 to 5%.

Command message:

:DECode:BUS1:SENT:TOLerance 5

DEC:BUS1:SENT:TOL 5

Query message:

DEC:BUS1:SENT:TOL?

Response message:

5

:DECode:BUS<n>:SENT:IDLE

Command/Query

DESCRIPTION The command sets the idle level of the SENT bus.

The query returns the current idle level of the SENT bus.

COMMAND SYNTAX :DECode:BUS<n>:SENT:IDLE <idle>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<idle>:= {LOW|HIGH}

QUERY SYNTAX :DECode:BUS<n>:SENT:IDLE?

RESPONSE FORMAT <idle>

<idle>:= {LOW|HIGH}

EXAMPLE The following command sets the idle level of the SENT bus of

the bus 1 as low.

Command message:

:DECode:BUS1:SENT:IDLE LOW DEC:BUS1:SENT:IDLE LOW

Query message:

DEC:BUS1:SENT:IDLE?

Response message:

LOW

:DECode:BUS<n>:SENT:LENGth

Command/Query

DESCRIPTION The command sets the number of nibbles of the SENT bus.

This guery returns the current number of nibbles of the SENT

bus.

COMMAND SYNTAX :DECode:BUS<n>:SENT:LENGth <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [3, 8].

QUERY SYNTAX :DECode:BUS<n>:SENT:LENGth?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the Number of nibbles of the

SENT on bus 1 to 5.

Command message:

:DECode:BUS1:SENT:LENGth 5 DEC:BUS1:SENT:LENG 5

Query message:

DEC:BUS1:SENT:LENG?

Response message:

5

:DECode:BUS<n>:SENT:CRC

Command/Query

DESCRIPTION The command sets the CRC format of the SENT bus.

The query returns the CRC format of the SENT bus.

COMMAND SYNTAX :DECode:BUS<n>:SENT:CRC <state>

<state>:= {OFF|ON}

ON sets to 2010 CRC format. OFF sets to 2008 CRC format.

QUERY SYNTAX :DECode:BUS<n>:SENT:CRC?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command sets to 2010 CRC format of the SENT

bus on the bus 1.

Command message:

:DECode:BUS1:SENT:CRC ON DEC:BUS1:SENT:CRC ON

Query message:

DEC:BUS1:SENT:CRC?

Response message:

ON

:DECode:BUS<n>:SENT:PPULse

Command/Query

DESCRIPTION The command sets the state of pause pulse of the SENT bus.

The query returns the current state of pause pulse of the

SENT bus.

COMMAND SYNTAX :DECode:BUS<n>:SENT:PPULse <state>

<state>:= {OFF|ON}

QUERY SYNTAX :DECode:BUS<n>:SENT:PPULse?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command sets the state of pause of the SENT

bus on the bus 1 as ON.

Command message:

 $:\! DECode:\! BUS1:\! SENT:\! PPULse\ ON$

DEC:BUS1:SENT:PPUL ON

Query message:

DEC:BUS1:SENT:PPUL?

Response message:

ON

:DECode:BUS<n>:MANChester Commands [Option]

The :DECode:BUS<n>:MANChester subsystem commands control the MANChester decode settings of the specified bus.

- :DECode:BUS<n>:MANChester:SOURce

- :DECode:BUS<n>:MANChester:BITorder

:DECode:BUS<n>:MANChester:SOURce

Command/Query

DESCRIPTION The command selects the source of the Manchester bus.

This query returns the current source of the Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:SOURce <source>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DECode:BUS<n>:MANChester:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the source of the Manchester

as C1 on bus 1.

Command message:

:DECode:BUS1:MANChester:SOURce C1

DEC:BUS1:MANC:SOUR C1

Query message:

DEC:BUS1:MANC:SOUR?

Response message:

C1

RELATED COMMANDS :DECode:BUS<n>:MANChester:THReshold

:DECode:BUS<n>:MANChester:THReshold

Command/Query

DESCRIPTION The command sets the threshold of the source on Manchester

bus.

This query returns the current threshold of the source on

Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:THReshold <value>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|-------------------------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro
SDS6000A
SDS6000L | [-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset] |
| SDS5000X
SDS2000X HD | [-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset] |

QUERY SYNTAX :DECode:BUS<n>:MANChester:THReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the threshold of the Manchester

bus source to 1 V on bus 1.

Command message:

:DECode:BUS1:MANChester:THReshold 1.00E+00

DEC:BUS1:MANC:THR 1.00E+00

Query message:

DEC:BUS1:MANC:THR?

Response message:

1.00E+00

RELATED COMMANDS :DECode:BUS<n>:MANChester:SOURce

:DECode:BUS<n>:MANChester:BAUD

Command/Query

DESCRIPTION The command sets the baud rate for the Manchester bus.

This guery returns the current baud rate for the Manchester

bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:BAUD <base>baud>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [500, 5000000].

QUERY SYNTAX :DECode:BUS<n>:MANChester:BAUD?

RESPONSE FORMAT

<b

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the baud rate for the Manchester

to 9600bps on bus 1.

Command message:

:DECode:BUS1:MANChester:BAUD 9600

DEC:BUS1:MANC:BAUD 9600

Query message:

DEC:BUS1:MANC:BAUD?

Response message:

9600

:DECode:BUS<n>:MANChester:POLarity

Command/Query

DESCRIPTION The command sets the signal's logic type of the Manchester

bus.

The query returns the current polarity of the Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:PULarity <polar>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<polar>:= {RISing|FALLing}

RISing indicates that rising edge is used to encode a bit

value of logic 1.

FALLing indicates that falling edge is used to encode a bit

value of logic 1.

QUERY SYNTAX :DECode:BUS<n>:MANChester:POLarity?

RESPONSE FORMAT <polar>

<polar>:= {RISing|FALLing}

EXAMPLE The following command encods the rising edge of the

Manchester bus of the bus 1 as logic 1.

Command message:

:DECode:BUS1:MANChester:POLarity RISing

DEC:BUS1:MANC:POL RIS

Query message:

DEC:BUS1:MANC:POL?

Response message:

RISing

:DECode:BUS<n>:MANChester:IDLE

Command/Query

DESCRIPTION The command sets the idle level of the Manchester bus.

The query returns the current idle level of the Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:IDLE <idle>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<idle>:= {LOW|HIGH}

QUERY SYNTAX :DECode:BUS<n>:MANChester:IDLE?

RESPONSE FORMAT <idle>

<idle>:= {LOW|HIGH}

EXAMPLE The following command sets the idle level of the Manchester

bus of the bus 1 as LOW.

Command message:

:DECode:BUS1:MANChester:IDLE LOW

DEC:BUS1:MANC:IDLE LOW

Query message:

DEC:BUS1:MANC:IDLE?

Response message:

LOW

:DECode:BUS<n>:MANChester:IBITs

Command/Query

DESCRIPTION The command sets the idle bits of the Manchester bus.

This query returns the current idle bits of the Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:IBITs <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [2, 32].

QUERY SYNTAX :DECode:BUS<n>:MANChester:IBITs?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the idle bits of the Manchester on

bus 1 to 5.

Command message:

:DECode:BUS1:MANChester:IBITs 5

DEC:BUS1:MANC:IBIT 5

Query message:

DEC:BUS1:MANC:IBIT?

Response message:

5

:DECode:BUS<n>:MANChester:STARt

Command/Query

DESCRIPTION The command sets the start edge of the Manchester bus.

This query returns the current start edge of the Manchester

bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:STARt <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [1, 32].

QUERY SYNTAX :DECode:BUS<n>:MANChester:STARt?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the start edge of the Manchester

on bus 1 to $\overline{5}$.

Command message:

:DECode:BUS1:MANChester:STARt 5

DEC:BUS1:MANC:STAR 5

Query message:

DEC:BUS1:MANC:STAR?

Response message:

5

:DECode:BUS<n>:MANChester:SSIZe

Command/Query

DESCRIPTION The command sets the sync size of the Manchester bus.

This query returns the current sync size of the Manchester

bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:SSIZe <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [0, 32].

QUERY SYNTAX :DECode:BUS<n>:MANChester:SSIZe?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the sync size of the Manchester

on bus 1 to $\overline{5}$.

Command message:

:DECode:BUS1:MANChester:SSIZe 5

DEC:BUS1:MANC:SSIZ 5

Query message:

DEC:BUS1:MANC:SSIZ?

Response message:

5

:DECode:BUS<n>:MANChester:HSIZe

Command/Query

DESCRIPTION The command sets the header size of the Manchester bus.

This query returns the current header size of the Manchester

bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:HSIZe <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [0, 32].

QUERY SYNTAX :DECode:BUS<n>:MANChester:HSIZe?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the header size of the Manchester

on bus 1 to $\overline{5}$.

Command message:

:DECode:BUS1:MANChester:HSIZe 5

DEC:BUS1:MANC:HSIZ 5

Query message:

DEC:BUS1:MANC:HSIZ?

Response message:

5

RELATED COMMANDS :DECode:BUS<n>:MANChester:DISPlay

:DECode:BUS<n>:MANChester:TSIZe

Command/Query

DESCRIPTION The command sets the trailer size of the Manchester bus.

This guery returns the current trailer size of the Manchester

bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:TSIZe <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [0, 32].

QUERY SYNTAX :DECode:BUS<n>:MANChester:TSIZe?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the trailer size of the Manchester

on bus 1 to $\overline{5}$.

Command message:

:DECode:BUS1:MANChester:TSIZe 5

DEC:BUS1:MANC:TSIZ 5

Query message:

DEC:BUS1:MANC:TSIZ?

Response message:

5

RELATED COMMANDS :DECode:BUS<n>:MANChester:DISPlay

:DECode:BUS<n>:MANChester:WSIZe

Command/Query

DESCRIPTION The command sets the word size of the Manchester bus.

This guery returns the current word size of the Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:WSIZe <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [2, 8].

QUERY SYNTAX :DECode:BUS<n>:MANChester:WSIZe?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the word size of the Manchester on

bus 1 to 5.

Command message:

:DECode:BUS1:MANChester:WSIZe 5

DEC:BUS1:MANC:WSIZ 5

Query message:

DEC:BUS1:MANC:WSIZ?

Response message:

5

RELATED COMMANDS :DECode:BUS<n>:MANChester:DISPlay

:DECode:BUS<n>:MANChester:DSIZe

Command/Query

DESCRIPTION The command sets the data word length of the Manchester

bus.

This query returns the current data word length of the

Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:DSIZe <value>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [1, 255].

QUERY SYNTAX :DECode:BUS<n>:MANChester:DSIZe?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data bits of the Manchester

on bus 1 to 5.

Command message:

:DECode:BUS1:MANChester:DSIZe 5

DEC:BUS1:MANC:DSIZ 5

Query message:

DEC:BUS1:MANC:DSIZ?

Response message:

5

RELATED COMMANDS :DECode:BUS<n>:MANChester:DISPlay

:DECode:BUS<n>:MANChester:DISPlay

Command/Query

DESCRIPTION The command sets the display format of the Manchester bus.

The query returns the current display format of the Manchester

bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:DISPlay <format>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<format>:= {WORD|BIT}

QUERY SYNTAX :DECode:BUS<n>:MANChester:DISPlay?

RESPONSE FORMAT <format>

<format>:= {WORD|BIT}

EXAMPLE The following command sets the display format of the

Manchester bus of the bus 1 as WORD.

Command message:

:DECode:BUS1:MANChester:DISPlay WORD

DEC:BUS1:MANC:DISP WORD

Query message:

DEC:BUS1:MANC:DISP?

Response message:

WORD

:DECode:BUS<n>:MANChester:BITorder

Command/Query

DESCRIPTION The command sets the bit order of the Manchester bus.

The query returns the current bit order of the Manchester bus.

COMMAND SYNTAX :DECode:BUS<n>:MANChester:BITorder <order>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command

<order>:= {LSB|MSB}

QUERY SYNTAX :DECode:BUS<n>:MANChester:BITorder?

RESPONSE FORMAT <order>

<order>:= {LSB|MSB}

EXAMPLE The following command sets the bit order of the Manchester

bus of the bus 1 as MSB.

Command message:

:DECode:BUS1:MANChester:BITorder MSB

DEC:BUS1:MANC:BIT MSB

Query message:

DEC:BUS1:MANC:BIT?

Response message:

MSB

DIGital Commands [Option]

The :DIGital subsystem commands control the viewing of digital channels. They also control threshold settings for groups of digital channels.

- :DIGital
- :DIGital:ACTive
- :DIGital:BUS<n>:DISPlay
- :DIGital:BUS<n>:DEFault
- :DIGital:BUS<n>:FORMat
- :DIGital:BUS<n>:MAP
- :DIGital:D<d>
- :DIGital:HEIGht
- :DIGital:LABel<d>
- :DIGital:POINts
- :DIGital:POSition
- :DIGital:SKEW
- :DIGital:SRATe
- :DIGital:THReshold<n>

:DIGital

Command/Query

DESCRIPTION The command set the switch of the digital.

This query returns the current state of the digital.

COMMAND SYNTAX :DIGital <state>

<state>:= {ON|OFF}

ON enables the channel.OFF disables the channel.

QUERY SYNTAX :DIGital?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables digital function.

Command message:

:DIGital ON DIG ON

Query message:

DIG?

Response message:

ON

240

:DIGital:ACTive

Command/Query

DESCRIPTION This command activates the specified digital channel.

This query returns the active digital channel.

COMMAND SYNTAX :DIGital:ACTive <digital>

<digital>:= {D<d>}

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DIGital:ACTive?

RESPONSE FORMAT <digital>

<digital>:= {D<d>}

EXAMPLE The following command selects the digital channel 5

waveform.

Command message:

:DIGital:ACTive D5

DIG:ACT D5

Query message:

DIG:ACT?

Response message:

D5

:DIGital:BUS<n>:DISPlay

Command/Query

DESCRIPTION The command sets the display of the specified digital bus.

This query returns the current display of the specified digital

bus.

COMMAND SYNTAX :DIGital:BUS<n>:DISPlay <state>

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<state>:= {ON|OFF}

QUERY SYNTAX :DIGital:BUS<n>:DISPlay?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

ON displays the selected bus.

OFF removes the selected bus from the display.

EXAMPLE The following command sets digital bus 1 on.

Command message:

:DIGital:BUS1:DISPlay ON

DIG:BUS1:DISP ON

Query message:

DIG:BUS1:DISP?

Response message:

ON

:DIGital:BUS<n>:DEFault

Command

DESCRIPTION This command resets the digital channel bus bit order

COMMAND SYNTAX :DIGital:BUS<n>:DEFault

<n>:= {1|2}, is attached as a suffix to BUS and defines the bus

that is affected by the command.

EXAMPLE The following command resets the digital channel bus1 data.

Command message: :DIGital:BUS1:DEFault

DIG:BUS1:DEF

RELATED COMMANDS :DIGital:BUS<n>:MAP

:DIGital:BUS<n>:FORMat

Command/Query

DESCRIPTION The command selects the display format of the specified

digital bus.

This query returns the current display format of the specified

digital bus.

COMMAND SYNTAX :DIGital:BUS<n>:FORMat <format>

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<format>:= {BINary|DECimal|UDECimal|HEX}

BINary presents the decoded data in binary format

DECimal presents the decoded data in decimal format

UDECimal presents the decoded data in unsigned

decimal format

HEX presents the decoded data in hexadecimal format

QUERY SYNTAX :DIGital:BUS<n>:FORMat?

RESPONSE FORMAT <format>

<format>:= {BINary|DECimal|UDECimal|HEX }

EXAMPLE The following command selects the display format of the digital

bus 1 to HEX.

Command message:

:DIGital:BUS1:FORMat HEX

DIG:BUS1:FORM HEX

Query message:

DIG:BUS1:FORM?

Response message:

HEX

:DIGital:BUS<n>:MAP

Command/Query

DESCRIPTION The command sets the bit order of each digital channel in the

digital bus and the bit width of the digital bus.

The query returns the current digital bus data composition in

the LSB order.

COMMAND SYNTAX :DIGital:BUS<n>:MAP <source>[...[,<source>]]

 $n>:= \{1|2\}$, is attached as a suffix to BUS and defines the bus

that is affected by the command.

<source>:= {D<d>}

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

Note:

 It will synchronously set the bit width of the digital bus, which is determined by the number of parameters.

 Use the command :DIGital:BUS<n>:DEFault to reset the bit sequence to d0-d15 according to the current digital bus

bit width.

QUERY SYNTAX :DIGital:BUS<n>:MAP?

RESPONSE FORMAT <source>[...[,<source>]]

<source>:= {D<d>}

EXAMPLE The following command the data of the digital bus 1 to

D0,D3,D7,D15.

Command message:

:DIGital:BUS1:MAP D0,D3,D7,D15

DIG:BUS1:MAP D0,D3,D7,D15

Query message:

DIG:BUS1:MAP?

Response message:

D0,D3,D7,D15

RELATED COMMANDS :DIGital:BUS<n>:DEFault

:DIGital:D<d>

:DIGital:D<d>

Command/Query

DESCRIPTION This command enables or disables the specified digital

channel.

This query returns the switch of the specified digital channel.

COMMAND SYNTAX :DIGital:D<d> <state>

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {ON|OFF}

• ON enables the specified digital channel.

• OFF disables the specified digital channel.

QUERY SYNTAX :DIGital:D<d>?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command closes the digital channel 5.

Command message:

:DIGital:D5 OFF DIG:D5 OFF

Query message:

DIG:D5?

Response message:

OFF

RELATED COMMANDS :DIGital

:DIGital:HEIGht

Command/Query

DESCRIPTION This command sets the height of digital channel waveform

display.

This query returns the height of digital channel waveform

display.

COMMAND SYNTAX :DIGital:HEIGht <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. This value indicates the number of divisions occupied by the digital waveform in the vertical direction when the waveform area is not compressed.

The range of the value is [4.00E+00, 8.00E+00].

QUERY SYNTAX :DIGital:HEIGht?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the height of the digital channel

display area to 6 div.

Command message:

:DIGital:HEIGht 6.00E+00 DIG:HEIG 6.00E+00

Query message:

DIG:HEIG?

Response message:

6.00E+00

RELATED COMMANDS :DIGital:POSition

:DIGital:LABel<d>

Command/Query

DESCRIPTION This command sets the label text of the selected digital channel.

This query returns the current label text of the selected digital

channel.

COMMAND SYNTAX :DIGital:LABel<d> <string>

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

<string>:= Quoted string of ASCII text. The length of the string

is limited to 8.

QUERY SYNTAX :DIGital:LABel<d>?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the label name of the digital

channel 15 to "IIC DATA".

Command message:

:DIGital:LABel15 "IIC_DATA" DIG:LAB15 "IIC_DATA"

Query message: DIG:LAB15?

Response message:

"IIC_DATA"

RELATED COMMANDS :DIGital:D<d>

:DIGital:POINts

Query

DESCRIPTION This query returns the number of sampling points of the digital

channel.

QUERY SYNTAX :DIGital:POINts?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command query returns the number of sampling

points of the digital channel.

Query message:

DIG:POIN?

Response message:

6.25E+02

RELATED COMMANDS :DIGital:SRATe

:DIGital:POSition

Command/Query

DESCRIPTION The command sets the position of the digital channel waveform

display.

The query returns the position of the digital channel waveform

display.

COMMAND SYNTAX :DIGital:POSition <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. This value indicates the number of divisions the digital waveform moves from top to bottom of the waveform area when the waveform area is not compressed

Note:

The range of legal values varies with the number of digital

channels displayed.

QUERY SYNTAX :DIGital:POSition?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the position of the digital channel

display area to 4 div when the digital channel height is 4.

Command message:

:DIGital:POSition 4.00E+00

DIG:POS 4.00E+00

Query message:

DIG:POS?

Response message:

4.00E+00

RELATED COMMANDS :DIGital:HEIGht

:DIGital:SKEW

Command/Query

DESCRIPTION This command sets the skew of the digital channel.

This query returns the current skew of the digital channel.

COMMAND SYNTAX :DIGital:SKEW <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value is [-1.00E-07, 1.00E-07].

QUERY SYNTAX :DIGital:SKEW?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the skew of the digital channel to

100 ns.

Command message:

:DIGital:SKEW 1.00E-07 DIG:SKEW 1.00E-07

Query message:

DIG:SKEW?

Response message:

1.00E-07

:DIGital:SRATe

Query

DESCRIPTION This command query returns the sampling rate of the digital

channel.

QUERY SYNTAX :DIGital:SRATe?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command query returns the sampling rate of the

digital channel.

Query message:

DIG:SRAT?

Response message:

1.25E+09

:DIGital:THReshold<n>

Command/Query

DESCRIPTION

This command sets the threshold value of the digital channel group.

This query returns the threshold value of the digital channel group.

COMMAND SYNTAX

:DIGital:THReshold<n> <type>

<n>:= {1|2}

- ◆ 1 means D0-D7
- 2 means D8-D15

<type>:=

{TTL|CMOS|LVCMOS33|LVCMOS25|CUSTom[,<value>]}

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|--|----------------|
| SDS7000A
SDS6000 Pro
SDS6000A
SDS6000L
SDS5000X
SDS3000X HD
SDS2000X Plus
SDS2000X HD | [-1E+01,1E+01] |
| SDS1000X HD
SDS800X HD | [-8E-1, 8E-1] |

QUERY SYNTAX

:DIGital:THReshold<n>?

RESPONSE FORMAT

<type>

<type>:=

{TTL|CMOS|LVCMOS33|LVCMOS25|CUSTom[,<value>]}

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the threshold value of D0-D7 to CMOS.

Command message:

:DIGital:THReshold1 CMOS

DIG:THR1 CMOS

Query message:

DIG:THR1?

Response message:

CMOS

DISPlay Commands

The :DISPlay subsystem commands control waveforms and screen displays.

- :DISPlay:AXIS
- :DISPlay:AXIS:MODE
- :DISPlay:AXIS:POSition
- :DISPlay:BACKlight
- :DISPlay:CLEar
- :DISPlay:COLor
- :DISPlay:GRATicule
- :DISPlay:GRIDstyle
- :DISPlay:HIDemenu
- :DISPlay:INTensity
- :DISPlay:MENU
- :DISPlay:MENU:HIDE
- :DISPlay:PERSistence
- :DISPlay:TRANsparence
- :DISPlay:TYPE

:DISPlay:AXIS

Command/Query

DESCRIPTION The command sets the display of the axis label.

The query returns the current status of the axis label.

COMMAND SYNTAX :DISPlay:AXIS <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DISPlay:AXIS?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the axis label.

Command message: :DISPlay:AXIS ON DISP:AXIS ON

Query message: DISP:AXIS?

Response message:

ON

:DISPlay:AXIS:MODE

Command/Query

DESCRIPTION The command selects the mode of the axis label.

The query returns the current mdoe of the axis label.

COMMAND SYNTAX :DISPlay:AXIS:MODE <mode>

<mode>:= {FIXed|MOVing}

 FIXed means that position of the axes remain fixed, while the coordinates update as the waveform is moving.

 MOVing means when moving the waveform, the position of the axes moves with the waveform, while the coordinates remain fixed.

QUERY SYNTAX :DISPlay:AXIS:MODE?

RESPONSE FORMAT <mode>

<mode>:= {FIXed|MOVing}

EXAMPLE The following command sets the mode of axis label to FIXed.

Command message:

:DISPlay:AXIS:MODE FIXed DISP:AXIS:MODE FIXed

Query message: DISP:AXIS:MODE?

Response message:

FIXed

:DISPlay:AXIS:POSition

Command/Query

DESCRIPTION The command sets the display position of the vertical axis of

the axis label.

The query returns the display position of the vertical axis of the

axis label.

COMMAND SYNTAX :DISPlay:AXIS:POSition <pos>

<pos>:= {LEFT|MIDDle|RIGHt}

 LEFT means the vertical axis is located on the left side of the screen.

• MIDDle means the vertical axis is located on the middle side of the screen.

 RIGHt means the vertical axis is located on the right side of the screen

QUERY SYNTAX :DISPlay:AXIS:POSition?

RESPONSE FORMAT <pos>

<pos>:= {LEFT|MIDDle|RIGHt}

EXAMPLEThe following command sets the vertical axis display position

of the axis label to the right.

Command message:

:DISPlay:AXIS:POSition RIGHt

DISP:AXIS:POS RIGH

Query message:

DISP:AXIS:POS?

Response message:

RIGHt

:DISPlay:BACKlight

Command/Query

DESCRIPTION This command sets the backlight level of the screen.

The query returns the current backlight level of the screen.

COMMAND SYNTAX :DISPlay:BACKlight <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [0, 100]. 0 is the

least bright and 100 is the brightest.

QUERY SYNTAX :DISPlay:BACKlight?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command changes the backlight level to 100%.

Command message:

:DISPlay:BACKlight 100

DISP:BACK 100

Query message:

DISP:BACK?

Response message:

100

:DISPlay:CLEar

Command

DESCRIPTION The command clears the waveform displayed on the screen.

COMMAND SYNTAX :DISPlay:CLEar

EXAMPLE The following command clears the waveform displayed on the

screen.

Command message:

:DISPlay:CLEar DISP:CLE

RELATED COMMANDS :ACQuire:CSWeep

:DISPlay:COLor

Command/Query

DESCRIPTION The command sets the state of the color grade.

The query returns the state of the current color grade.

COMMAND SYNTAX :DISPlay:COLor <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DISPlay:COLor?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the color grade.

Command message: :DISPlay:COLor ON

DISP:COL ON

Query message: DISP:COL?

Response message:

ON

:DISPlay:GRATicule

Command/Query

DESCRIPTION The command sets the brightness level of the grid.

The query returns the current brightness level of the grid.

COMMAND SYNTAX :DISPlay:GRATicule <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [0, 100]. 0 is the

least bright and 100 is the brightest.

QUERY SYNTAX :DISPlay:GRATicule?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command changes the grid brightness level to

50%.

Command message:

:DISPlay:GRATicule 50

DISP:GRAT 50

Query message:

DISP:GRAT?

Response message:

50

:DISPlay:GRIDstyle

Command/Query

DESCRIPTION This command selects the type of grid to display.

The query returns the current type of grid to display.

COMMAND SYNTAX :DISPlay:GRIDstyle <type>

<type>:= {FULL|LIGHt|NONE}

QUERY SYNTAX :DISPlay:GRIDstyle?

RESPONSE FORMAT <type>

<type>:= {FULL|LIGHt|NONE}

EXAMPLE The following command sets the grid type to light grid.

Command message:

:DISPlay:GRIDstyle LIGHt

DISP:GRID LIGH

Query message: DISP:GRID?

Response message:

LIGHt

:DISPlay:HIDemenu

Command/Query

DESCRIPTION This command hides the right menu immediately.

COMMAND SYNTAX :DISPlay:HIDemenu

EXAMPLE The following command sets to hide the menu on the right.

Command message: :DISPlay:HIDemenu

DISP:HID

RELATED COMMANDS :DISPlay:MENU:HIDE

:DISPlay:INTensity

Command/Query

DESCRIPTION The command sets the intensity level of the waveform.

The query returns the current intensity level of the waveform.

COMMAND SYNTAX :DISPlay:INTensity <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [0, 100]. 0 is the

least bright and 100 is the brightest.

QUERY SYNTAX :DISPlay:INTensity?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the intensity level of the

waveform to 75%.

Command message:

:DISPlay:INTensity 75

DISP:INT 75

Query message:

DISP:INT?

Response message:

75

:DISPlay:MENU

Command/Query

DESCRIPTION This command selects the style of menu to display.

The query returns the style of menu to display.

COMMAND SYNTAX :DISPlay:MENU <type>

<type>:= {EMBedded|FLOating}

QUERY SYNTAX :DISPlay:MENU?

RESPONSE FORMAT <type>

<type>:= {EMBedded|FLOating}

EXAMPLE The following command sets the menu style to floating.

Command message:

:DISPlay:MENU FLOating

DISP:MENU FLO

Query message: DISP:MENU?

Response message:

FLOating

:DISPlay:MENU:HIDE

Command/Query

DESCRIPTION This command sets the time for the menu to automatically hide.

The query returns the time for the menu to automatically hide.

COMMAND SYNTAX :DISPlay:MENU:HIDE <time>

<time>:= {OFF|3S|5S|10S|30S|60S}

QUERY SYNTAX :DISPlay:MENU:HIDE?

RESPONSE FORMAT <time>

<time>:= {OFF|3S|5S|10S|30S|60S}

EXAMPLE The following command sets the menu auto hide time to 10s.

Command message:

:DISPlay:MENU:HIDE 10S DISP:MENU:HIDE 10S

Query message: DISP:MENU:HIDE?

Response message:

10S

RELATED COMMANDS :DISPlay:HIDemenu

:DISPlay:PERSistence

Command/Query

DESCRIPTION The command selects the persistence duration of the display,

in seconds, in persistence mode.

The query returns the current status of the persistence setting.

COMMAND SYNTAX :DISPlay:PERSistence <time>

<time>:= vary from models, see the table below for details.

| Model | <time></time> |
|------------------|--------------------------------|
| SDS7000A | |
| SDS6000 Pro | |
| SDS6000A | {OFF INFinite 100MS 200MS |
| SDS6000L | 500MS 1S 5S 10S 30S} |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS2000X Plus | |
| SHS800X/SHS1000X | {OFF INFinite 1S 5S 10S 30S} |
| SDS1000X HD | {OFF VF (e 15 55 105 505} |
| SDS800X HD | |

QUERY SYNTAX :DISPlay:PERSistence?

RESPONSE FORMAT <time>

EXAMPLE The following command sets the variable persistence at 5

seconds.

Command message:

:DISPlay:PERSistence 5S

DISP:PERS 5S

Query message:

DISP:PERS?

Response message:

*5*S

:DISPlay:TRANsparence

Command/Query

DESCRIPTIONThis command sets the transparency level of the information

bar, only valid for SHS800X/SHS1000X.

The query returns the transparency level of the current

information bar.

COMMAND SYNTAX :DISPlay:TRANsparence <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [0, 100]. 0 is the

least transparent and 100 is the most transparent.

QUERY SYNTAX :DISPlay:TRANsparence?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command changes the transparency level to

80%.

Command message:

:DISPlay:TRANsparence 80

DISP:TRAN 80

Query message:

DISP:TRAN?

Response message:

80

:DISPlay:TYPE

Command/Query

DESCRIPTION The command sets the interpolation lines between data points.

The query returns the interpolation lines between data points.

COMMAND SYNTAX :DISPlay:TYPE <type>

<type>:= {VECTor|DOT}

VECTor is the default mode and draws lines between points. DOT mode displays data more quickly than vector mode but

does not draw lines between sample points.

QUERY SYNTAX :DISPlay:TYPE?

RESPONSE FORMAT <type>

<type>:= {VECTor|DOT}

EXAMPLE The following command sets the interpolation lines between

data points to vector.

Command message:

:DISPlay:TYPE VECTor DISP:TYPE VECT

Query message: DISP:TYPE?

Response message:

VECTor

DVM Commands

The :DVM subsystem commands control the digital voltage meter (DVM) feature. This function can be used to measure parameters such as DC and AC amplitudes.

• :DVM

• :DVM:ALARm

:DVM:ARANge

• :DVM:CURRent

• :DVM:HOLD

◆ :DVM:MODE

:DVM:SOURce

:DVM

Command/Query

DESCRIPTION This command sets the switch of the dvm function.

The query returns the current state of the dvm.

COMMAND SYNTAX :DVM <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DVM?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the dvm.

Command message:

:DVM ON DVM ON

Query message:

DVM?

Response message:

ON

:DVM:ALARm

Command/Query

DESCRIPTION This command sets the switch of the overload alarm. When

enabled, an alarm will be given if the signal amplitude exceeds

the screen range.

The query returns the switch of the overload arm.

COMMAND SYNTAX :DVM:ALARm <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DVM:ALARm?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}.

EXAMPLE The following command sets the alarm on.

Command message: :DVM:ALARm ON DVM:ALAR ON

Query message: DVM:ALAR?

Response message:

ON

:DVM:ARANge

Command/Query

DESCRIPTION This command sets the auto range state for the dvm.

The query returns the auto range state for the dvm.

COMMAND SYNTAX :DVM:ARANge <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DVM:ARANge?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the auto range.

Command message: :DVM:ARANge ON DVM:ARAN ON

Query message: DVM:ARAN?

Response message:

ON

:DVM:CURRent

Query

DESCRIPTION The query returns the displayed 3-digit DVM value based on

the current mode.

QUERY SYNTAX :DVM:CURRent?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following query returns the value of the current dvm mode.

Query message: DVM:CURR?

Response message:

0.98E+00

:DVM:HOLD

Command/Query

DESCRIPTION This command sets the hold switch of dvm. When enabled, the

measured display value will remain unchanged.

The query returns the current hold switch of dvm.

COMMAND SYNTAX :DVM:HOLD <state>

<state>:= {ON|OFF}

QUERY SYNTAX :DVM:HOLD?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the hold switch.

Command message: :DVM:HOLD ON

DVM:HOLD ON

Query message: DVM:HOLD?

Response message:

ON

:DVM:MODE

Command/Query

DESCRIPTION

This command sets the digital voltmeter (DVM) mode.

The query returns the current digital voltmeter (DVM) mode:.

COMMAND SYNTAX

:DVM:MODE <mode>

<mode>:= {DCavg|DCRMs|ACRMs|PKPK|AMPLitude}

- DCavg displays the DC value of the acquired data.
- DCRMs displays the root-mean-square value of the acquired data.
- ACRMs displays the root-mean-square value of the acquired data, with the DC component removed.
- PKPK displays the difference between maximum and minimum data values
- AMPLitude displays difference between top and base in a bimodal waveform. If not bimodal, displays difference between max and min

QUERY SYNTAX

:DVM:MODE?

RESPONSE FORMAT

<mode>

<mode>:= {DCavg|DCRMs|ACRMs|PKPK|AMPLitude}

EXAMPLE

The following command sets the dvm mode to AMPLitude.

Command message:

:DVM:MODE AMPLitude DVM:MODE AMPL

Query message:

DVM:MODE?

Response message:

AMPLitude

:DVM:SOURce

Command/Query

DESCRIPTION This command sets the select the analog channel on which

digital voltmeter (DVM) measurements are made.

The query returns the current source of dvm.

COMMAND SYNTAX :DVM:SOURce <source>

<source>:= {C<n>}

C denotes an analog channel.

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :DVM:SOURce?

RESPONSE FORMAT <source>

<source>:= {Cn}

EXAMPLE The following command sets the dvm source to C2.

Command message:

:DVM:SOURce C2 DVM:SOUR C2

Query message: DVM:SOUR?

Response message:

C2

FUNCtion Commands

The :FUNCtion subsystem commands control the math functions in the oscilloscope.

- :FUNCtion:FFTDisplay
- :FUNCtion:GVALue
- :FUNCtion<x>
- :FUNCtion<x>:AVERage:NUM
- :FUNCtion<x>:DIFF:DX
- :FUNCtion<x>:ERES:BITS
- :FUNCtion<x>:FFT:AUToset
- :FUNCtion<x>:FFT:HCENter
- :FUNCtion<x>:FFT:HSCale
- :FUNCtion<x>:FFT:SPAN
- :FUNCtion<x>:FFT:LOAD
- :FUNCtion<x>:FFT:MODE
- :FUNCtion<x>:FFT:POINts
- :FUNCtion<x>:FFT:RESET
- :FUNCtion<x>:FFT:RLEVel
- :FUNCtion<x>:FFT:SCALe
- :FUNCtion<x>:FFT:SEARch
- :FUNCtion<x>:FFT:SEARch:EXCursion
- :FUNCtion<x>:FFT:SEARch:MARKer<n>
- :FUNCtion<x>:FFT:SEARch:MARKer<n>:SHOW
- :FUNCtion<x>:FFT:SEARch:MON
- :FUNCtion<x>:FFT:SEARch:PORDer
- :FUNCtion<x>:FFT:SEARch:RESult
- :FUNCtion<x>:FFT:SEARch:TABLe
- :FUNCtion<x>:FFT:SEARch:TABLe:DELTa
- :FUNCtion<x>:FFT:SEARch:TABLe:FREQuency
- :FUNCtion<x>:FFT:SEARch:THReshold
- :FUNCtion<x>:FFT:UNIT
- :FUNCtion<x>:FFT:WINDow
- :FUNCtion<x>:FILTer:TYPe
- :FUNCtion<x>:FILTer:HFRequency
- :FUNCtion<x>:FILTer:LFRequency
- :FUNCtion<x>:INTegrate:GATE
- :FUNCtion<x>:INTErpolate:COEF

- :FUNCtion<x>:INVert
- :FUNCtion<x>:LABel
- :FUNCtion<x>:LABel:TEXT
- :FUNCtion<x>:MAXHold:SWeeps
- :FUNCtion<x>:MINHold:SWeeps
- :FUNCtion<x>:OPERation
- :FUNCtion<x>:POSition
- :FUNCtion<x>:SCALe
- :FUNCtion<x>:SOURce1
- :FUNCtion<x>:SOURce2

:FUNCtion:FFTDisplay

Command/Query

DESCRIPTION This command sets the display mode of the FFT waveform.

This query returns the current display mode of the FFT

waveform.

COMMAND SYNTAX :FUNCtion:FFTDisplay <mode>

<mode>:= {SPLit|FULL|EXCLusive}

 SPLit means that the channel waveform and the FFT waveform are displayed on the screen separately.

• FULL means a full-screen display of the FFT waveform.

• EXCLusive means that only the FFT waveform is

displayed on the screen.

QUERY SYNTAX :FUNCtion:FFTDisplay?

RESPONSE FORMAT <mode>

<mode>:= {SPLit|FULL|EXCLusive}

EXAMPLE The following command sets the display mode of the FFT

waveform to split.

Command message:

:FUNCtion:FFTDisplay SPLit

FUNC:FFTD SPL

Query message:

FUNC:FFTD?

Response message:

SPLit

:FUNCtion:GVALue

Command/Query

DESCRIPTION The command sets the integration threshold value of gate A

and gate B.inku

The query returns the current integration threshold values.

COMMAND SYNTAX :FUNCtion:GVALue <valueA>,<valueB>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is

[-horizontal_grid/2*timebase+delay, horizontal_grid/2*timebase+delay].

Note:

The value of GA cannot be greater than that of GB. If you set the value greater than GB, it will automatically be set to the

same value as GB.

QUERY SYNTAX :FUNCtion:GVALue?

RESPONSE FORMAT <valueA>,<valueB>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the position of gate A to -100 ns

and set the position of gate B to 100ns.

Command message:

:FUNCtion:GVALue -1.00E-07,1.00E-07

FUNC:GVAL -1.00E-07,1.00E-07

Query message:

FUNC:GVAL?

Response message:

-1.00E-07,1.00E-07

RELATED COMMANDS :FUNCtion<x>:INTegrate:GATE

:FUNCtion<x>

Command/Query

DESCRIPTION This command set the switch of the math function.

This query returns the current state of the math function.

COMMAND SYNTAX :FUNCtion<x> <state>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables Function1 of math.

Command message:

:FUNCtion1 ON FUNC1 ON

Query message:

FUNC1?

Response message:

ON

:FUNCtion<x>:AVERage:NUM

Command/Query

DESCRIPTION This command sets the average number for the average

operation.

This query returns the current average number for the average

operation.

COMMAND SYNTAX :FUNCtion<x>:AVERage:NUM <num>

> <x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<num>:= vary from models, see the table below for details.

| Model | <num></num> |
|---------------|-----------------------------------|
| SDS7000A | |
| SDS6000 Pro | |
| SDS6000A | {4 16 32 64 128 256 512 1024 2048 |
| SDS6000L | 4096 8192} |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS2000X Plus | |
| SDS1000X HD | {4 16 32 64 128 256 512 1024} |
| SDS800X HD | |

QUERY SYNTAX :FUNCtion<x>:AVERage:NUM?

RESPONSE FORMAT <num>

EXAMPLE The following command changes the average number for the

average operation to 128 on Function2.

Command message:

:FUNCtion2:AVERage:NUM 128 FUNC2:AVER:NUM 128

Query message:

FUNC2:AVER:NUM?

Response message:

128

:FUNCtion<x>:DIFF:DX

Command/Query

DESCRIPTION This command sets the step size of the differential operation.

This query returns the current step size of the differential

operation.

COMMAND SYNTAX :FUNCtion<x>:DIFF:DX <dx>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command

<dx>:= Value in NR1 format, including an integer and no

decimal point, like 1.

QUERY SYNTAX :FUNCtion<x>:DIFF:DX?

RESPONSE FORMAT <dx>

<dx>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the step of the differential

operation to 4 on Function1.

Command message:

:FUNCtion1:DIFF:DX 4 FUNC1:DIFF:DX 4

Query message:

FUNC1:DIFF:DX?

Response message:

4

:FUNCtion<x>:ERES:BITS

Command/Query

DESCRIPTION This command sets the eres bits for the eres operation.

This query returns the current eres bits for the eres operation.

COMMAND SYNTAX :FUNCtion<n>:ERES:BITS <bits>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

bits>:= {0.5|1.0|1.5|2.0|2.5|3.0}

QUERY SYNTAX :FUNCtion<x>:ERES:BITS?

RESPONSE FORMAT

EXAMPLE The following command changes the eres bits for the eres

operation to 3.0 on Function2.

Command message:

:FUNCtion2:ERES:BITS 3.0 FUNC2:ERES:BITS 3.0

Query message:

FUNC2:ERES:BITS?

Response message:

3.0

:FUNCtion<x>:FFT:AUToset

Command

DESCRIPTION

This command causes the FFT waveform to be displayed at the best position on the screen.

COMMAND SYNTAX

:FUNCtion<x>:FFT:AUToset <mode>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to on FUNCtion and defines the math that is affected by the command.

<mode>:= {SPAN|PEAK|NORMal}

- SPAN full span.
- PEAK center to peak.
- NORMal –center set to the fundamental frequency and the span is set to one-half of the fft sampling rate

EXAMPLE

The following command causes the FFT waveform to be displayed at the best position on the screen on Function2.

Command message:

:FUNCtion2:FFT:AUToset NORMal FUNC2:FFT:AUT NORM

:FUNCtion<x>:FFT:HCENter

Command/Query

DESCRIPTION This command sets the center frequency of FFT.

This query returns the current center frequency of FFT.

COMMAND SYNTAX :FUNCtion<x>:FFT:HCENter <center>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<center>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The range of legal values varies with the FFT sampling rate.

QUERY SYNTAX :FUNCtion<x>:FFT:HCENter?

RESPONSE FORMAT <center>

<center>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the center frequency of FFT to 2

MHz on Function2.

Command message:

:FUNCtion2:FFT:HCENter 2.00E+06 FUNC2:FFT:HCEN 2.00E+06

FUNC2:FFT:HCEN?

Query message:

Response message:

2.00E+06

:FUNCtion<x>:FFT:HSCale

Query

DESCRIPTION This query returns the current horizontal scale of FFT.

QUERY SYNTAX :FUNCtion<x>:FFT:HSCale?

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

RESPONSE FORMAT <scale>

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following query returns the horizontal scale of FFT on

Function2.

Query message: FUNC2:FFT:HSC?

Response message:

1.00E+08

RELATED COMMANDS :FUNCtion<x>:FFT:HCENter

:FUNCtion<x>:FFT:SPAN

:FUNCtion<x>:FFT:SPAN

Command/Query

DESCRIPTION This command sets the horizontal span of FFT.

This query returns the current horizontal span of FFT.

COMMAND SYNTAX :FUNCtion<x>:FFT:SPAN

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :FUNCtion<x>:FFT:SPAN?

RESPONSE FORMAT

:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the span frequency of FFT to 2

MHz on Function2.

Command message:

:FUNCtion2:FFT:SPAN 2.00E+06 FUNC2:FFT:SPAN 2.00E+06

Query message:

FUNC2:FFT:SPAN?

Response message:

1.00E+08

RELATED COMMANDS :FUNCtion<x>:FFT:HCENter

:FUNCtion<x>:FFT:LOAD

Command/Query

DESCRIPTION This command sets the external load of the FFT.

This query returns the current external load of FFT.

COMMAND SYNTAX :FUNCtion<x>:FFT:LOAD <load>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<load>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1, 1000000]

Note:

The load can be set only when the FFT unit is dBm.

QUERY SYNTAX :FUNCtion<x>:FFT:LOAD?

RESPONSE FORMAT <load>

<load>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the load of FFT to 50Ω on

Function2.

Command message:

:FUNCtion2:FFT:LOAD 50 FUNC2:FFT:LOAD 50

Query message: FUNC2:FFT:LOAD?

Response message:

50

RELATED COMMANDS :FUNCtion<x>:FFT:UNIT

:FUNCtion<x>:FFT:MODE

Command/Query

DESCRIPTION

This command selects the acquisition mode of the FFT

operation.

This query returns the current acquisition mode of the FFT $\ddot{\cdot}$

operation.

COMMAND SYNTAX

:FUNCtion<x>:FFT:MODE <mode>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<mode>:= {NORMal|MAXHold|AVERage[,<num>]}

- NORMal sets the FFT in the normal mode.
- MAXHold sets the FFT in the max detect mode.
- AVERage sets the FFT in the averaging mode.

<num>:= Value in NR1 format, including an integer and no
decimal point, like 1.

The range of the value is [4, 1024].

QUERY SYNTAX

:FUNCtion<x>:FFT:MODE?

RESPONSE FORMAT

<mode>

<mode>:= {NORMal|MAXHold|AVERage[,<num>]}

<num>:= Value in NR1 format, including an integer and no decimal point, like 1.

EXAMPLE

The following command sets the acquisition mode of the FFT operation on Function2 to normal.

Command message:

:FUNCtion2:FFT:MODE NORMAL FUNC2:FFT:MODE NORM

Query message:

FUNC2:FFT:MODE?

Response message:

NORMal

:FUNCtion<x>:FFT:POINts

Command/Query

DESCRIPTION This command sets the maximum number of points for the

FFT operation.

This query returns the current maximum number of points for

the FFT operation.

COMMAND SYNTAX :FUNCtion<x>:FFT:POINts <point>

<n>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<point>:= Vary from models, see the table below for details.

| Model | Value Range |
|---|---|
| SDS7000A | {1k 2k 4k 8k 16k 32k 64k 128k 256k
 512k 1M 2M 4M 8M 16M 32M } |
| SDS6000 Pro
SDS6000A
SDS6000L | {1k 2k 4k 8k 16k 32k 64k 128k 256k
 512k 1M 2M 4M 8M} |
| SDS3000X HD | {1k 2k 4k 8k 16k 32k 64k 128k 256k
 512k 1M 2M 4M} |
| SDS5000X
SDS2000X Plus
SDS2000X HD
SDS1000X HD
SDS800X HD | {1k 2k 4k 8k 16k 32k 64k 128k 256k
 512k 1M 2M} |
| SHS800X
SHS1000X | {1k 2k 4k 8k 16k 32k 64k 128k 256k
 512k 1M} |

QUERY SYNTAX :FUNCtion<x>:FFT:POINts?

RESPONSE FORMAT <point>

EXAMPLE The following command changes the maximum number of

points for the FFT operation to 2M on Function2.

Command message:

:FUNCtion2:FFT:POINts 2M

FUNC2:FFT:POIN 2M

Query message: FUNC2:FFT:POIN?

Response message:

2M

:FUNCtion<x>:FFT:RESET

Command

DESCRIPTION This command restarts counting when the acquisition mode is

average.

COMMAND SYNTAX :FUNCtion<x>:FFT:RESET

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

EXAMPLE The following command restarts counting on Function2 when

the acquisition mode is average.

Command message: :FUNCtion2:FFT:RESET FUNC2:FFT:RESET

RELATED COMMANDS :FUNCtion<x>:FFT:MODE

:FUNCtion<x>:FFT:RLEVel

Command/Query

DESCRIPTION

The command sets the reference level of the FFT operation.

The query returns the current reference level of the FFT operation.

COMMAND SYNTAX

:FUNCtion<x>:FFT:RLEVel <level>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<level>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the values is related to the probe of the FFT source.

| Probe | dBVrms | Vrms | dBm |
|--------|------------|--------------|------------|
| 1E6 X | [-40,200] | [1E-2,1E10] | [-27,213] |
| 1E5 X | [-60,180] | [1E-3,1E9] | [-47,193] |
| 1E4 X | [-80,160] | [1E-4,1E8] | [-67,173] |
| 1000X | [-100,140] | [1E-5,1E7] | [-87,153] |
| 100X | [-120,120] | [1E-6,1E6] | [-107,133] |
| 10X | [-140,100] | [1E-7,1E5] | [-127,113] |
| 1 | [-160,80] | [1E-8,1E4] | [-147,93] |
| 0.1X | [-180,60] | [1E-9,1E3] | [-167,73] |
| 0.01X | [-200,40] | [1E-10,1E2] | [-187,53] |
| 1E-3 X | [-220,20] | [1E-11,10] | [-207,33] |
| 1E-4 X | [-240,0] | [1E-12,1] | [-227,13] |
| 1E-5 X | [-260,-20] | [1E-13,1E-1] | [-247,-7] |
| 1E-6 X | [-280,-40] | [1E-14,1E-2] | [-267,-27] |

Note:

The smaller the :FUNCtion<x>:FFT:SCALe, the greater the accuracy of the level value.

QUERY SYNTAX

:FUNCtion<x>:FFT:RLEVel?

RESPONSE FORMAT

<level>

<level>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the reference level of FFT operation to 10 dBV on Function2 when the FFT unit is dBVrms.

Command message:

:FUNCtion2:FFT:RLEVel 1.00E+01 FUNC2:FFT:RLEV 1.00E+01

Query message: FUNC2:FFT:RLEV?

Response message:

1.00E+01

RELATED COMMANDS

:CHANnel<n>:PROBe :FUNCtion<x>:FFT:SCALe

:FUNCtion<x>:FFT:SCALe

Command/Query

DESCRIPTION The command sets the vertical scale of the FFT.

The query returns the current vertical scale of FFT.

COMMAND SYNTAX

:FUNCtion<x>:FFT:SCALe <scale>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<scale>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the values is related to the vertical unit.

| Unit | Range |
|--------|----------------------|
| dBVrms | [1.00E-01, 2.00E+01] |
| Vrms | [1.00E-03, 1.00E+01] |
| dBm | [1.00E-01, 2.00E+01] |

QUERY SYNTAX

:FUNCtion<x>:FFT:SCALe?

RESPONSE FORMAT

<scale>

<scale>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the vertical scale of FFT to 20 dB on Function2 when the FFT unit is dBVrms.

Command message:

:FUNCtion2:FFT:SCALe 2.00E+01 FUNC2:FFT:SCAL 2.00E+01

Query message:

FUNC2:FFT:SCAL?

Response message:

2.00E+01

RELATED COMMANDS

:CHANnel<n>:PROBe

:FUNCtion<x>:FFT:SEARch

Command/Query

DESCRIPTIONThis command selects the search tools type of the FFT

operation.

This query returns the current search tools type of the FFT

operation.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch <type>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<type>:= {OFF|PEAK|MARKer}

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch?

RESPONSE FORMAT <type>

<type>:= {OFF|PEAK|MARKer}

EXAMPLE The following command sets the search tools type of FFT

operation on Function2 to marker.

Command message:

:FUNCtion2:FFT:SEARch MARKer

FUNC2:FFT:SEAR MARK

Query message: FUNC2:FFT:SEAR?

Response message:

MARKer

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch:THReshold

:FUNCtion<x>:FFT:SEARch:EXCursion

:FUNCtion<x>:FFT:SEARch:EXCursion

Command/Query

DESCRIPTIONThis command sets the search excursion of the search tool

(marker or peak) for the FFT operation.

This query returns the current search excursion of the search

tool for the FFT operation.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:EXCursion <value>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the values is [0, 1.60E+02] when the FFT unit is

dBVrms. The value range varies with the corresponding unit.

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch:EXCursion?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the search excursion of the

marker of the FFT operation to 20 dB on Function2 when the

FFT unit is dBVrms.

Command message:

:FUNCtion2:FFT:SEARch:EXCursion 2.00E+01

FUNC2:FFT:SEAR:EXC 2.00E+01

Query message:

FUNC2:FFT:SEAR:EXC?

Response message:

2.00E+01

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch:THReshold

:FUNCtion<x>:FFT:SEARch:MARKer<n>

Command

DESCRIPTION

This command sets the frequency of the specified marker.

COMMAND SYNTAX

:FUNCtion<x>:FFT:SEARch:MARKer<n> <freq>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to on FUNCtion and defines the math that is affected by the command.

<n>:= 1 to (# marker index) in NR1 format, is attached as a suffix to on MARKer and defines the marker that is affected by the command.

<freq>:= {NPeak|NAMPlitude|<value>}

- NPeak means marking the next peak
- NAMPlitude means marking the next amplitude
- <value>:= frequency value in NR3 format.

EXAMPLE

The following command sets the frequency of FFT marker1 for function1 to 1 MHz.

Command message:

:FUNCtion1:FFT:SEARch:MARKer1 1.00E+06 FUNC1:FFT:SEAR:MARK1 1.00E+06

RELATED COMMANDS

:FUNCtion<x>:FFT:SEARch

:FUNCtion<x>:FFT:SEARch:MARKer<n>:SHOW

:FUNCtion<x>:FFT:SEARch:MARKer<n>:SHOW

Command

DESCRIPTION This command sets the switch state of the specified marker.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:MARKer<n>:SHOW <state>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to on FUNCtion and defines the math that is affected by

the command.

<n>:= 1 to (# marker index) in NR1 format, is attached as a suffix to on MARKer and defines the marker that is affected by

the command.

<state>:= {ON|OFF}

EXAMPLE The following command sets to disable function 1 FFT search

marker2

Command message:

:FUNCtion1:FFT:SEARch:MARKer2:SHOW ON

FUNC1:FFT:SEAR:MARK2:SHOW ON

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch

:FUNCtion<x>:FFT:SEARch:MON

Command

DESCRIPTION

This command sets the FFT marker on peaks or harmonics.

COMMAND SYNTAX

:FUNCtion<x>:FFT:SEARch:MON <type>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to on FUNCtion and defines the math that is affected by the command.

<type>:= {PEAK|HARMonics}

PEAK means marking on peaks

HARMonics means marking on harmonics

EXAMPLE

The following command sets the marker of function 1 FFT on PEAK.

Command message:

:FUNCtion1:FFT:SEARch:MON PEAK FUNC1:FFT:SEAR:MON PEAK

:FUNCtion<x>:FFT:SEARch:PORDer

Command/Query

DESCRIPTION This command sets the sorting method for FFT peak values.

The query returns the sorting method for FFT peak values.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:PORDer <type>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to on FUNCtion and defines the math that is affected by

the command.

<type>:= {AMPLitude|FREQuency}

AMPLitude means sorting by amplitude.

FREQuency meanssorting by frequency.

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch:PORDer?

RESPONSE FORMAT <type>

<type>:= {AMPLitude|FREQuency}

EXAMPLE The following command sets the FFT list of function1 in order

of amplitude.

Command message:

:FUNCtion1:FFT:SEARch:PORDer AMPLitude

FUNC1:FFT:SEAR:PORD AMPL

Query message:

FUNC1:FFT:SEAR:PORD?

Response message:

AMPLitude

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch

:FUNCtion<x>:FFT:SEARch:RESult

Query

DESCRIPTION

The query returns the current search list result for the FFT operation. It only contains search number, frequency and amplitude information.

QUERY SYNTAX

:FUNCtion<x>:FFT:SEARch:RESult?

RESPONSE FORMAT

<type>,<no>,<freq>,<ampl>;

<type>:={Markers|Peaks}

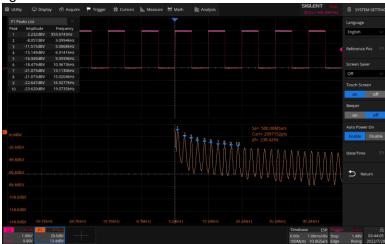

<no>:= Value in NR1 format, indicates the peak number or marker number

<freq>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

<ampl>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The unit is the same as FFT vertical unit

EXAMPLE

The following query returns the peaks result of function1 in the figure below.

Query message:

FUNC1:FFT:SEAR:RES?

Response message:

```
Peaks,1,9.536743E+02,2.231755E+00;
2,3.099442E+03,-8.056905E+00;
3,5.006790E+03,-1.151463E+01;
4,6.914139E+03,-1.514894E+01;
5,9.059906E+03,-1.694874E+01;
6,1.096725E+04,-1.847880E+01;
7,1.311302E+04,-2.107302E+01;
8,1.502037E+04,-2.107302E+01;
9,1.692772E+04,-2.264706E+01;
10,1.907349E+04,-2.361992E+01;
```

:FUNCtion<x>:FFT:SEARch:EXCursion

:FUNCtion<x>:FFT:UNIT

:FUNCtion<x>:FFT:SEARch:TABLe

Command/Query

DESCRIPTION This command sets the state of FFT search table.

The query returns the state of FFT search table.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:TABLe <state>

<x>:= 1 to (# math functions) in NR1 format is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch:TABLe?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets the search table state of

function1 FFT to ON.

Command message:

:FUNCtion1:FFT:SEARch:TABLe ON

FUNC1:FFT:SEAR:TABL ON

Query message:

FUNC1:FFT:SEAR:TABL?

Response message:

ON

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch

:FUNCtion<x>:FFT:SEARch:TABLe:DELTa

Command/Query

DESCRIPTIONThis command sets the display state of increments in the FFT

search table.

The query returns the the display state of increments in the

FFT search table.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:TABLe:DELTa <state>

<x>:= 1 to (# math functions) in NR1 format is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch:TABLe:DELTa?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets the function 1 FFT's search table

to display increment.

Command message:

:FUNCtion1:FFT:SEARch:TABLe:DELTa ON

FUNC1:FFT:SEAR:TABL:DELT ON

Query message:

FUNC1:FFT:SEAR:TABL:DELT?

Response message:

ON

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch:TABLe

:FUNCtion<x>:FFT:SEARch:TABLe:FREQuency

Command/Query

DESCRIPTIONThis command sets the display state of frequency in the FFT

search table.

This query returns the the display state of frequency in the FFT

search table.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:TABLe:FREQuency <state>

<x>:= 1 to (# math functions) in NR1 format is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch:TABLe:FREQuency?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets the function 1 FFT's search table

to display frequency.

Command message:

:FUNCtion1:FFT:SEARch:TABLe:FREQuency ON

FUNC1:FFT:SEAR:TABL:FREQ ON

Query message:

FUNC1:FFT:SEAR:TABL:FREQ?

Response message:

ON

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch:TABLe

:FUNCtion<x>:FFT:SEARch:THReshold

Command/Query

DESCRIPTION The command sets the search threshold of the search tool

(marker or peak) for the FFT operation.

The query returns the current search threshold of the search

tool for the FFT operation.

COMMAND SYNTAX :FUNCtion<x>:FFT:SEARch:THReshold <value>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the values is [-1.60E+02, 8.00E+01], when FFT

unit is dBVrms. The value changes to match the set Units

value.

QUERY SYNTAX :FUNCtion<x>:FFT:SEARch:THReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the search threshold of the

marker of the FFT operation to -100 dBV on Function2 when

the FFT unit is dBVrms.

Command message:

:FUNCtion2:FFT:SEARch:THReshold -1.00E+2

FUNC2:FFT:SEAR:THR -1.00E+2

Query message:

FUNC2:FFT:SEAR:THR?

Response message:

-1.00E+02

RELATED COMMANDS :FUNCtion<x>:FFT:SEARch:EXCursion

:FUNCtion<x>:FFT:UNIT

Command/Query

DESCRIPTION This command sets the unit type of the FFT operation.

This query returns the current unit type of the FFT operation.

COMMAND SYNTAX :FUNCtion<x>:FFT:UNIT <unit>

<x>:= 1 to (# math functions) in NR1 format is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<unit>:= {DBVrms|Vrms|DBm}

QUERY SYNTAX :FUNCtion<x>:FFT:UNIT?

RESPONSE FORMAT <unit>

<unit>:= {DBVrms|Vrms|DBm}

EXAMPLE The following command sets the unit type of FFT operation on

Function2 to dBVrms.

Command message:

:FUNCtion2:FFT:UNIT DBVrms FUNC2:FFT:UNIT DBVrms

Query message: FUNC2:FFT:UNIT?

Response message:

DBVrms

:FUNCtion<x>:FFT:WINDow

Command/Query

DESCRIPTION

This command selects the window type of the FFT operation.

This query returns the current window type of the FFT operation.

COMMAND SYNTAX

:FUNCtion<x>:FFT:WINDow <window>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<window>:=

{RECTangle|BLACkman|HANNing|HAMMing|FLATtop}

- RECTangle is useful for transient signals, and signals where there are an integral number of cycles in the time record.
- BLACkman reduces time resolution compared to the rectangular window, but it improves the capacity to detect smaller impulses due to lower secondary lobes (provides minimal spectral leakage).
- HANNing is useful for frequency resolution and generalpurpose use. It is good for resolving two frequencies that are close together, or for making frequency measurements.
- HAMMing means Hamming.
- FLATtop is the best for making accurate amplitude measurements of frequency peaks.

QUERY SYNTAX

:FUNCtion<x>:FFT:WINDow?

RESPONSE FORMAT

<window>

<window>:=

 $\{RECTangle|BLACkman|HANNing|HAMMing|FLATtop\}$

EXAMPLE

The following command sets the windowing of the FFT operation on Function2 to Flattop.

Command message:

:FUNCtion2:FFT:WINDow FLATtop

FUNC2:FFT:WIND FLAT

Query message:

FUNC2:FFT:WIND?

Response message:

FLATtop

:FUNCtion<x>:FILTer:TYPe

Command/Query

DESCRIPTION This command selects the filter type of the filter operation.

This query returns the current filter type of the filter operation.

COMMAND SYNTAX

:FUNCtion<x>:FILTer:TYPe <type>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<type>:= {LPASs|HPASs|BPASs|BREJect}

LPASs - Low pass filter.

HPASs - High pass filter.

BPASs - Band pass filter.

• BREJect - Band reject filter.

QUERY SYNTAX

:FUNCtion<x>:FILTer:TYPe?

RESPONSE FORMAT

<type>

<type>:= {LPASs|HPASs|BPASs|BREJect}

EXAMPLE

The following command sets the filter type of the filter

operation on Function2 to HPASs.

Command message:

:FUNCtion2:FILTer:TYPe HPASs

FUNC2:FILT:TYP HPAS

Query message:

FUNC2:FILT:TYP?

Response message:

HPASs

:FUNCtion<x>:FILTer:HFRequency

Command/Query

DESCRIPTION This command sets the upper frequency of the filter.

This query returns the current upper frequency of the filter.

The command/query is available only when the filter type is

BPASs or BREJect.

COMMAND SYNTAX :FUNCtion<x>:FILTer:HFRequency <value>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :FUNCtion<x>:FILTer:HFRequency?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the upper freq for the filter

operation to 100MHz on Function2.

Command message:

:FUNCtion2:FILTer:HFRequency 100MHz

FUNC2:FILT:HFR 100MHz

Query message:

FUNC2:FILT:HFR?

Response message:

1.00E+08

RELATED COMMANDS :FUNCtion<x>:FILTer:TYPe

:FUNCtion<x>:FILTer:LFRequency

:FUNCtion<x>:FILTer:LFRequency

Command/Query

DESCRIPTION This command sets the lower frequency of the filter.

This query returns the current lower frequency of the filter.

COMMAND SYNTAX :FUNCtion<x>:FILTer:LFRequency <value>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :FUNCtion<x>:FILTer:LFRequency?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the lower freq for the filter

operation to 50MHz on Function2.

Command message:

:FUNCtion2:FILTer:LFRequency 50MHz

FUNC2:FILT:LFR 50MHz

Query message: FUNC2:FILT:LFR?

Response message:

5.00E+07

RELATED COMMANDS :FUNCtion<x>:FILTer:HFRequency

:FUNCtion<x>:INTegrate:GATE

Command/Query

DESCRIPTIONThis command selects whether to enable the threshold of the

integral operation.

This query returns the threshold status of the integral

operation.

COMMAND SYNTAX :FUNCtion<x>:INTegrate:GATE <state>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>:INTegrate:GATE?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the threshold for the integral

operation of function 1.

Command message:

:FUNCtion1:INTegrate:GATE ON

FUNC1:INT:GATE ON

Query message: FUNC1:INT:GATE?

Response message:

ON

RELATED COMMANDS :FUNCtion:GVALue

:FUNCtion<x>:INTegrate:OFFSet

Command/Query

DESCRIPTION The command sets the dc offset of the integrate operation.

The query returns the current dc offset of the integrate

operation.

COMMAND SYNTAX :FUNCtion<x>:INTegrate:OFFSet <offset>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<offset>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of values corresponds to the vertical pixel range:

[-100 pixels, 100 pixels].

QUERY SYNTAX :FUNCtion<x>:INTegrate:OFFSet?

RESPONSE FORMAT <offset>

<offset>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command changes the offset of the integral

operation to 100 mV on Function1.

Command message:

:FUNCtion1:INTegrate:OFFSet 1.00E-01

FUNC1:INT:OFFS 1.00E-01

Query message:

FUNC1:INT:OFFS?

Response message:

1.00E-01

RELATED COMMANDS :CHANnel<n>:PROBe

:FUNCtion<x>:INTErpolate:COEF

Command/Query

DESCRIPTIONThis command sets the upsample coef for the interpolate

operation.

This query returns the current upsample coef for the

interpolate operation.

COMMAND SYNTAX :FUNCtion<x>:INTErpolate:COEF <coef>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<coef>:= {2|5|10|20}

QUERY SYNTAX :FUNCtion<x>:INTErpolate:COEF?

RESPONSE FORMAT <coef>:= {2|5|10|20}

EXAMPLE The following command changes the upsample coef for the

interpolate operation to 10 on Function2.

Command message:

:FUNCtion2:INTErpolate:COEF 10

FUNC2:INTE:COEF 10

Query message:

FUNC2:INTE:COEF?

Response message:

10

:FUNCtion<x>:INVert

Command/Query

DESCRIPTION This command inverts the math waveform.

This query returns whether the math waveform is inverted or

not.

COMMAND SYNTAX :FUNCtion<x>:INVert <state>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>:INVert?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command inverts the Function1 waveform.

Command message:

:FUNCtion1:INVert ON

FUNC1:INV ON

Query message:

FUNC1:INV?

Response message:

ON

:FUNCtion<x>:LABel

Command/Query

DESCRIPTION This command is to turn the specified math label on or off.

This query returns the label associated with a particular math

function.

COMMAND SYNTAX :FUNCtion<x>:LABel <state>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<state>:= {ON|OFF}

QUERY SYNTAX :FUNCtion<x>:LABel?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the label of the Function1.

Command message: :FUNCtion1:LABel ON FUNC1:LAB ON

Query message: FUNC1:LAB?

Response message:

ON

RELATED COMMANDS :FUNCtion<x>:LABel:TEXT

:FUNCtion<x>:LABel:TEXT

Command/Query

DESCRIPTIONThis command sets the selected math label to the string that

follows. Setting a label for a math function also adds the name to the label list in non-volatile memory (replacing the oldest

label in the list)

This query returns the current label text of the selected math.

COMMAND SYNTAX :FUNCtion<x>:LABel:TEXT <string>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<string>:= Quoted string of ASCII text. The length of the string

is limited to 20.

QUERY SYNTAX :FUNCtion<x>:LABel:TEXT?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the label text of the Function1 to

"MATH".

Command message:

:FUNCtion1:LABel:TEXT "MATH"

FUNC1:LAB:TEXT "MATH"

Query message: FUNC1:LAB:TEXT?

Response message:

"MATH"

RELATED COMMANDS :FUNCtion<x>:LABel

:FUNCtion<x>:MAXHold:SWeeps

Command/Query

DESCRIPTION This command sets the sweeps limit for the maxhold operation.

This query returns the current sweeps limit for the maxhold

operation.

COMMAND SYNTAX :FUNCtion<x>:MAXHold:Sweeps <value>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 2147483646],

where 0 represents unlimited.

QUERY SYNTAX :FUNCtion<x>:MAXHold:Sweeps?

RESPONSE FORMAT <value>

<value>:= Value in NR1 forma, including an integer and no

decimal point, like 1.

EXAMPLE The following command changes the sweeps limit for the

maxhold operation to 100 on Function2.

Command message:

:FUNCtion2:MAXHold:SWeeps 100

FUNC2:MAXH:SW 100

Query message:

FUNC2:MAXH:SW?

Response message:

100

:FUNCtion<x>:MINHold:SWeeps

Command/Query

DESCRIPTION This command sets the sweeps limit for the minhold operation.

This query returns the current sweeps limit for the minhold

operation.

COMMAND SYNTAX :FUNCtion<x>:MINHold:SWeeps <value>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 2147483646],

where 0 represents unlimited.

QUERY SYNTAX :FUNCtion<x>:MINHold:Sweeps?

RESPONSE FORMAT <value>

<value>:= Value in NR1 forma, including an integer and no

decimal point, like 1.

EXAMPLE The following command changes the sweeps limit for the

minhold operation to 100 on Function2.

Command message:

:FUNCtion2:MINHold:SWeeps 100

FUNC2:MINH:SW 100

Query message: FUNC2:MINH:SW?

Response message:

100

:FUNCtion<x>:OPERation

Command/Query

DESCRIPTION This command sets the desired waveform math operation.

This query returns the current operation for the selected

function.

COMMAND SYNTAX :FUNCtion<x>:OPERation <operation>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<operation>:=

{ADD|SUBTract|MULTiply|DIVision|INTegrate|DIFF|FFT|SQRT| ERES|AVERage|ABSolute|SIGN|IDENtity|NEGation|EXP|TEN|

LN|LOG|INTErpolate|MAXHold|MINHold|FILTer}

QUERY SYNTAX :FUNCtion<x>:OPERation?

RESPONSE FORMAT

<operation>:=

{ADD|SUBTract|MULTiply|DIVision|INTegrate|DIFF|FFT|SQRT| ERES|AVERage|ABSolute|SIGN|IDENtity|NEGation|EXP|TEN|

LN|LOG|INTErpolate|MAXHold|MINHold|FILTer}

EXAMPLE The following command sets the Function1 operation to

Multiplication.

Command message:

:FUNCtion1:OPERation MULTiply

FUNC1:OPER MULT

Query message:

FUNC1:OPER?

Response message:

MULTiply

:FUNCtion<x>:POSition

Command/Query

DESCRIPTION This command sets the vertical position of the selected math

operation (arithmetic and algebra operation).

This query returns the current position value for the selected

operation.

COMMAND SYNTAX :FUNCtion<x>:POSition <offset>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<offset>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The range of values is uniform and related to an operation.

QUERY SYNTAX :FUNCtion<x>:POSition?

RESPONSE FORMAT <offset>

<offset>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command changes the vertical position of

Function1 waveform to 1 V.

Command message:

:FUNCtion1:POSition 5.00E-01

FUNC1:POS 5.00E-01

Query message:

FUNC1:POS?

Response message:

5.00E-01

RELATED COMMANDS :FUNCtion<x>:OPERation

:FUNCtion<x>:SCALe

Command/Query

DESCRIPTIONThe command sets the vertical scale of the selected math

operation (arithmetic and algebra operation).

The query returns the current scale value for the selected

operation.

COMMAND SYNTAX :FUNCtion<x>:SCALe <scale>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the

command.

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The range of the function scale is related to the scale of

the function source.

• When the operation is INTegrate and DIFF, the scale

range is related to the timebase.

QUERY SYNTAX :FUNCtion<x>:SCALe?

RESPONSE FORMAT <scale>

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command changes the vertical scale of

Function1 waveform to 1 V.

Command message:

:FUNCtion1:SCALe 1.00E+00

FUNC1:SCAL 1.00E+00

Query message:

FUNC1:SCAL?

Response message:

1.00E+00

RELATED COMMANDS :CHANnel<n>:SCALe

:FUNCtion<x>:SOURce1

Command/Query

DESCRIPTION

This command sets the source1 of the math operation.

This guery returns the current source1 of the math operation.

COMMAND SYNTAX

:FUNCtion<x>:SOURce1 <source>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<source>:= {C<n>|Z<n>|F<x>|M<m>}

- C denotes an analog channel.
- Z denotes a zoomed source.
- F denotes a math function, for math-on-math operations.
- M denotes a memory waveform.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

Note:

- Z<n> is optional only when Zoom is on.
- FUNCtion<x> cannot set itself as the source.

QUERY SYNTAX

:FUNCtion<x>:SOURce1?

RESPONSE FORMAT

<source>

<source>:= {C<n>|Z<n>|F<x>|M<m>}

EXAMPLE

The following command sets the source 1 of Function2 to C1.

Command message:

:FUNCtion2:SOURce1 C1 FUNC2:SOUR1 C1

Query message:

FUNC2:SOUR1?

Response message:

C1

RELATED COMMANDS

:FUNCtion<x>:SOURce2

:FUNCtion<x>:SOURce2

Command/Query

DESCRIPTION

This command sets the source2 of the math operation.

This query returns the current source2 of the math operation.

COMMAND SYNTAX

:FUNCtion<x>:SOURce2 <source>

<x>:= 1 to (# math functions) in NR1 format, is attached as a suffix to FUNCtion and defines the math that is affected by the command.

<source>:= {C<n>|Z<n>|F<x>|M<m>}

- C denotes an analog channel.
- Z denotes a zoomed source.
- F denotes a math function, for math-on-math operations.
- M denotes a memory waveform.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

Note:

- Z<n> is optional only when Zoom is on.
- FUNCtion<x> cannot set itself as the source.

QUERY SYNTAX

:FUNCtion<x>:SOURce2?

RESPONSE FORMAT

<source>

<source>:= {C<n>|Z<n>|F<x>|M<m>}

EXAMPLE

The following command sets the source2 of Function2 to C1.

Command message:

:FUNCtion2:SOURce2 C1 FUNC2:SOUR2 C1

Query message:

FUNC2:SOUR2?

Response message:

C1

RELATED COMMANDS

:FUNCtion<x>:SOURce1

HISTORy Commands

The :HISTORy subsystem commands control the waveform recording function and the history waveform play function.

- :HISTORy
- :HISTORy:FRAMe
- :HISTORy:INTERval
- :HISTORy:LIST
- :HISTORy:PLAY
- ◆ :HISTORy:TIME

:HISTORy

Command/Query

DESCRIPTION The command sets the mode of the history function.

This query returns the current status of the history function.

COMMAND SYNTAX :HISTORy <state>

<state>:= {ON|OFF}

QUERY SYNTAX :HISTORY?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the history function.

Command message:

:HISTORy ON HISTOR ON

Query message:

HISTOR?

Response message:

ON

:HISTORy:FRAMe

Command/Query

DESCRIPTION This command sets the number of the history frame.

This query returns the current number of history frames.

COMMAND SYNTAX :HISTORy:FRAMe <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

Note:

The maximum number of frames is related to the number of samples set for the acquisition (memory depth). More points/frame means less total frames available. Fewer

points/frame equals more frames available.

QUERY SYNTAX :HISTORy:FRAMe?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of the history frame

to 4.

Command message:

:HISTORy:FRAMe 4 HISTOR:FRAM 4

Query message:

HISTOR:FRAM?

Response message:

4

:HISTORy:INTERval

Command/Query

DESCRIPTION This command sets the play interval of the history frame.

This query returns the current play interval of the history frame.

COMMAND SYNTAX :HISTORy:INTERval <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value is [1.00E-06,1].

QUERY SYNTAX :HISTORy:INTERval?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the play interval of the history

frame to 1 ms.

Command message:

:HISTORy:INTERval 1.00E-03 HISTOR:INTER 1.00E-03

Query message:

HISTOR:INTER?

Response message:

1.00E-03

:HISTORy:LIST

Command/Query

DESCRIPTION This command sets the state of the history list.

This query returns the current state of the history list.

COMMAND SYNTAX :HISTORy:LIST <state>

<state>:= {OFF|ON[,<type>]}

<type>:= {TIME|DELTa}

 TIME indicates that the time column is displayed by sampling time

 DELTa indicates that the time column is displayed by the sampling interval.

QUERY SYNTAX :HISTORy:LIST?

RESPONSE FORMAT <state>

<state>:= {OFF|ON[,<type>]}

<type>:= {TIME|DELTa}

EXAMPLE The following command turns on the history list and displays it

by sampling time.

Command message:

:HISTORy:LIST ON,TIME HISTOR:LIST ON,TIME

Query message:

HISTOR:LIST?

Response message:

ON, TIME

:HISTORy:PLAY

Command/Query

DESCRIPTION This command sets the play state of the history waveform.

This query returns the current play state of the history

waveform.

COMMAND SYNTAX :HISTORy:PLAY <state>

<state>:= {BACKWards|PAUSe|FORWards}

 BACKWards indicates that the frame number is played from highest frame number to lowest (last-to-first, chronologically).

 FORWards indicates that the frame number is played from the lowest frame number to the highest (first-to-last, chronologically).

◆ PAUSe will pause playback.

QUERY SYNTAX :HISTORy:PLAY?

RESPONSE FORMAT <state>

<state>:= {BACKWards|PAUSe|FORWards}

EXAMPLE The following command sets the playback state of the history

waveform to backwards.

Command message:

:HISTORy:PLAY BACKWards HISTOR:PLAY BACKW

Query message: HISTOR:PLAY?

Response message:

BACKWards

:HISTORy:TIME

Query

DESCRIPTION The query returns the acquire timestamp of the current frame.

QUERY SYNTAX :HISTORy:TIME?

RESPONSE FORMAT <time>

<time>:= hours:minutes:seconds.microseconds in NR1 format,

including an integer and no decimal point, like 1.

EXAMPLE The following command returns the time of acquisition of the

current frame.

Query message: :HISTOR:TIME?

Response message: 07:48:09.253827

RELATED COMMANDS :HISTORy:FRAMe

:MEASure

Command/Query

DESCRIPTION The command sets the state of the measurement function.

This guery returns the current state of the measurement

function.

COMMAND SYNTAX :MEASure <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MEASure?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the measurement function.

Command message:

:MEASure ON :MEAS ON

Query message:

MEAS?

Response message:

ON

:MEASure:ADVanced:CLEar

Command

DESCRIPTION The command clears all the advanced measurement items.

COMMAND SYNTAX :MEASure:ADVanced:CLEar

EXAMPLE The following command clears the advanced measurement

items.

Command message:

:MEASure:ADVanced:CLEar

MEAS:ADV:CLE

RELATED COMMANDS :MEASure:ADVanced:P<n>

:MEASure:ADVanced:P<n>:TYPE

:MEASure:ADVanced:LINenumber

Command/Query

QUERY SYNTAX

DESCRIPTION The command sets the total number of advanced measurement

items displayed.

The query returns the current total number of advanced

measurement items displayed.

COMMAND SYNTAX :MEASure:ADVanced:LINenumber <value>

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1, 12].

:MEASure:ADVanced:LINenumber?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the total number of advanced

measurement items displayed to 12.

Command message:

:MEASure:ADVanced:LINenumber 12

MEAS:ADV:LIN 12

Query message: MEAS:ADV:LIN?

Response message:

12

RELATED COMMANDS :MEASure:MODE

:MEASure:ADVanced:P<n>

Command/Query

DESCRIPTION This command sets the state of the specified measurement

item.

This query returns the current state of the measurement item.

COMMAND SYNTAX :MEASure:ADVanced:P<n> <state>

P is the physical location of the specified measurement on the

display.

<n>:= 1 to 12

<state>:= {ON|OFF}

QUERY SYNTAX :MEASure:ADVanced:P<n>?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the first (leftmost/topmost)

measurement item.

Command message:

:MEASure:ADVanced:P1 ON

MEAS:ADV:P1 ON

Query message: *MEAS:ADV:P1?*

Response message:

ON

RELATED COMMANDS :MEASure:ADVanced:P<n>:TYPE

:MEASure:ADVanced:P<n>:SOURce1 :MEASure:ADVanced:P<n>:SOURce2

:MEASure:ADVanced:P<n>:SOURce1

Command/Query

DESCRIPTION

This command sets the source1 of the specified advanced measurement item.

This query returns the current source1 of the specified advanced measurement item.

COMMAND SYNTAX

:MEASure:ADVanced:P<n>:SOURce1 <source>

< n > := 1 to 12

<source>:= ${C<n>|Z<n>|F<x>|M<m>|D<d>|ZD<d>|REF<r>}$

- C denotes an analog channel.
- Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- D denotes a digital channel.
- ZD denotes a zoomed digital channel.
 REF denotes a reference waveform.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an integer and no decimal point, like 1.

 $< r > := {A|B|C|D}$

Note:

- Z<n> and ZD<d> are optional only when Zoom is on.
- The source can only be set to C<n> or F<x> when the type is delay measurement.

QUERY SYNTAX

:MEASure:ADVanced:P<n>:SOURce1?

RESPONSE FORMAT

<source>

EXAMPLE

The following command sets the source1 of the first measurement item to C1.

Command message:

:MEASure:ADVanced:P1:SOURce1 C1 MEAS:ADV:P1:SOUR1 C1

Query message:

MEAS:ADV:P1:SOUR1?

Response message:

C1

RELATED COMMANDS

:MEASure:ADVanced:P<n>:SOURce2 :MEASure:ADVanced:P<n>:TYPE

:MEASure:ADVanced:P<n>:SOURce2

Command/Query

DESCRIPTION This command sets the source2 of the specified advanced

measurement item. When the measurement type is delay

measurement item, source2 needs to be set.

This query returns the source2 of the specified advanced

measurement item.

COMMAND SYNTAX :MEASure:ADVanced:P<n>:SOURce2 <source>

<n>:= 1 to 12

<source>:= {C<n>|F<x>}

C denotes an analog channel.

F denotes a math function.

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an

integer and no decimal point, like 1.

UERY SYNTAX :MEASure:ADVanced:P<n>:SOURce2?

RESPONSE FORMAT <source>

<source>:= {C<n>|F<x>}

EXAMPLE The following command sets the source2 of the first

measurement item to C2.

Command message:

:MEASure:ADVanced:P1:SOURce2 C2

MEAS:ADV:P1:SOUR2 C2

Query message:

MEAS:ADV:P1:SOUR2?

Response message:

C2

RELATED COMMANDS :MEASure:ADVanced:P<n>:SOURce1

:MEASure:ADVanced:P<n>:TYPE

:MEASure:ADVanced:P<n>:STATistics

Query

RESPONSE FORMAT

EXAMPLE

DESCRIPTION This query returns statistics for the specified advanced

measurement item.

QUERY SYNTAX :MEASure:ADVanced:P<n>:STATistics? <type>

<n>:= 1 to 12

<type>:=

{ALL|CURRent|MEAN|MAXimum|MINimum|STDev|COUNt}

ALL returns all the statistics

calculate the statistical data

- CURRent returns the current value of the statistics
- MEAN returns the mean value of the statistics
- MAXimum returns the maximum value of the statistics
- MINimum returns the minimum value of the statistics
 STDev returns the standard deviation of the statistics
- COUNt returns the current number of counts used to

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

Note:

<value>

When measurement statistics are off, it returns OFF.

The following query returns the statistical current value of the

first measurement item.

Query message:

MEAS:ADV:P1:STAT? CURR

Response message:

6.7E-02

RELATED COMMANDS :MEASure:ADVanced:STATistics

:MEASure:ADVanced:P<n>:SHIStory

Query

DESCRIPTION This query returns statistics for the specified advanced

measurement item. Only valid when there is a limit on the maximum number of statistics, and returns the current statistical value when the count limit is Unlimited.

QUERY SYNTAX :MEASure:ADVanced:P<n>:SHIStory? [<count>]

n>:= 1 to 12

<count>:= The number and range of historical statistical data
are limited by the maximum number of statistics.

Note:

When <count>is not specified, return all historical data.

RESPONSE FORMAT Count =<value>,<value1>,<value2>,...,<valueN>

<value>:= Number of statistical data.

<valueN>:= Statistical data values.

EXAMPLE When the maximum number of statistics is 1024, The following

querys the top 5 measurement data of P1's current value.

Query message:

MEAS:ADV:P1:SHIS? 5

Response message:

Count=5,4.223529E+00,4.221176E+00,4.221176E+00,

4.214118E+00,4.223529E+00

RELATED COMMANDS :MEASure:ADVanced:STATistics:MAXCount

Command/Query

DESCRIPTION

This command sets the type for the specified measurement item.

This query returns the type for the specified measurement item.

COMMAND SYNTAX

:MEASure:ADVanced:P<n>:TYPE <parameter>

<n>:= 1 to 12

<parameter>:=

{PKPK|MAX|MIN|AMPL|TOP|BASE|LEVELX|CMEAN|MEAN| STDEV|VSTD|RMS|CRMS|MEDIAN|CMEDIAN|OVSN|FPRE| OVSP|RPRE|ULOWer|PER|FREQ|TMAX|TMIN|PWID|NWID|D UTY|NDUTY|WID|NBWID|DELAY|TIMEL|RISE|FALL|RISE10T 90|FALL90T10|CCJ|PAREA|NAREA|AREA|ABSAREA|CYCLE S|REDGES|FEDGES|EDGES|PPULSES|NPULSES|PHA|SKE W|FRR|FRF|FFR|FFF|LRR|LRF|LFR|LFF|PACArea|NACArea| ACArea|ABSACArea|PSLOPE|NSLOPE|TSR|TSF|THR|THF|D TIMe1|DTIMe2|DTIMe3|DTIMe4}

Description of Parameters

| Parameter | Description |
|-----------|--|
| PKPK | Difference between maximum and |
| | minimum data values |
| MAX | Highest value in waveform |
| MIN | Lowest value in waveform |
| AMPL | Difference between top and base in a |
| | bimodal waveform. If not bimodal, |
| | difference between max and min |
| ТОР | Value of most probable higher state in a |
| | bimodal waveform |
| BASE | Value of most probable lower state in a |
| | bimodal waveform |
| LEVELX | Level measured at trigger position |
| CMEAN | Average value of the first cycle |
| MEAN | Average of data values |
| STDEV | Standard deviation of the data |
| VSTD | Standard deviation of the first cycle |
| RMS | Root mean square of the data |
| CRMS | Root mean square of the first cycle |
| MEDIAN | Value at which 50% of the measurement |
| | are above and 50% are below |
| CMEDIAN | Median of the first cycle |
| OVSN | Overshoot following a falling edge; |
| | 100%* (base-min)/amplitude |
| FPRE | Overshoot before a falling edge; |
| FFRE | 100%*(max-top)/amplitude |
| OVSP | Overshoot following a rising edge; |
| | 100%*(max-top)/amplitude |
| RPRE | Overshoot before a rising edge; |
| | 100%*(base-min)/amplitude |

| | T |
|--------------|--|
| ULOWer | The value between the threshold upper |
| | and lower |
| PER | Time between the middle threshold |
| | points of two consecutive, like-polarity |
| TDTO. | edges Designated of period |
| FREQ
TMAX | Reciprocal of period First time of maximum value |
| | |
| TMIN | First time of minimum value Time difference between the middle |
| | threshold of a rising edge to the middle |
| PWID | threshold of the next falling edge of the |
| | pulse |
| | Time difference between the middle |
| NWID | threshold of a falling edge to the middle |
| | threshold of the next rising edge of the |
| | pulse |
| | Positive Duty Cycle. Ratio of positive |
| DUTY | width to period |
| NDUTY | Duty Cycle. Ratio of negative width to |
| NDUTY | period |
| 14/15 | Time from the first rising edge to the last |
| WID | falling edge at the middle threshold |
| | Time from the first falling edge to the last |
| NBWID | rising edge at the middle threshold |
| | Time from the trigger to the first transition |
| DELAY | at the middle threshold |
| T15.4E1 | Time from the trigger to each rising edge |
| TIMEL | at the middle threshold |
| DIOE | Duration of rising edge from lower to |
| RISE | upper of threshold |
| | Duration of falling edge from upper to |
| FALL | lower of threshold |
| RISE10T90 | Duration of rising edge from 10-90% |
| FALL90T10 | Duration of falling edge from 90-10% |
| CCJ | The difference between two continuous |
| 00 | periods |
| PAREA | Area of the waveform above zero |
| NAREA | Area of the waveform below zero |
| AREA | Area of the waveform |
| ABSAREA | Absolute area of the waveform |
| CYCLES | Number of cycles in a periodic waveform |
| EDGES | Number of edges in a waveform |
| REDGES | Number of rising edges in a waveform |
| FEDGES | Number of falling edges in a waveform |
| PPULSES | Number of positive pulses in a waveform |
| NPULSES | Number of negative pulses in a waveform |
| PHA | Phase difference between two edges |
| SKEW | Time of source A edge minus time of |
| J. (L 1 1 | nearest source B edge |
| FRR
FRF | The time between the first rising edge of |
| | source A and the first rising edge of |
| | source B at the middle threshold |
| | The time between the first rising edge of |
| | source A and the first falling edge of |
| FED | source B at the middle threshold |
| FFR | The time between the first falling edge of |

| | source A and the first rising edge of |
|-----------|---|
| | source B at the middle threshold |
| FFF | The time between the first falling edge of |
| | source A and the first falling edge of |
| | source B at the middle threshold |
| LRR | The time between the first rising edge of |
| | source A and the last rising edge of |
| | source B at the middle threshold |
| LRF | The time between the first rising edge of |
| | source A and the last falling edge of |
| | source B at the middle threshold |
| LFR | The time between the first falling edge of |
| | source A and the last rising edge of |
| | source B at the middle threshold |
| LFF | The time between the first falling edge of |
| | source A and the last falling edge of |
| | source B at the middle threshold |
| PACArea | Area of the waveform above average |
| NACArea | Area of the waveform below average |
| ACArea | Area of the waveform above average |
| | minus area of the waveform below |
| | average |
| ABSACArea | Area of the waveform above average add |
| | area of the waveform below average |
| PSLOPE | The slope of rising edges |
| NSLOPE | The slope of falling edges |
| TSR | Data setup time before the clock rising |
| | edge |
| TSF | Data setup time before the clock falling |
| | edge |
| THR | Data hold time after the clock rising edge |
| THF | Data hold time after the clock falling edge |
| DITMe1-4 | The time difference between the |
| | specified two edges |
| | |

QUERY SYNTAX

:MEASure:ADVanced:P<n>:TYPE?

RESPONSE FORMAT

<parameter>

EXAMPLE

The following command sets the type of the first measurement to maximum.

Command message:

:MEASure:ADVanced:P1:TYPE MAX

MEAS:ADV:P1:TYPE MAX

Query message:

MEAS:ADV:P1:TYPE?

Response message:

MAX

RELATED COMMANDS

:MEASure:ADVanced:P<n>

:MEASure:ADVanced:P<n>:VALue

Query

DESCRIPTION The query returns the value of the specified advanced

measurement item.

QUERY SYNTAX :MEASure:ADVanced:P<n>:VALue?

<n>:= 1 to 12

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following query returns the value of the first measurement

item.

Query message: MEAS:ADV:P1:VAL?

Response message:

4.033E+00

RELATED COMMANDS :MEASure:ADVanced:P<n>:TYPE

:MEASure:ADVanced:STATistics

Command/Query

DESCRIPTION The command sets the state of the measurement statistics.

This query returns the current state of the measurement

statistics function.

COMMAND SYNTAX :MEASure:ADVanced:STATistics <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MEASure:ADVanced:STATistics?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the statistics function.

Command message:

:MEASure:ADVanced:STATistics ON

MEAS:ADV:STAT ON

Query message: *MEAS:ADV:STAT?*

Response message:

ON

RELATED COMMANDS :MEASure:ADVanced:P<n>:STATistics

:MEASure:ADVanced:STATistics:AIMLimit

Command/Query

DESCRIPTION The command sets the value of the measurement statistics

AIM limit.

This query returns the current value of the measurement

statistics AIM limit.

COMMAND SYNTAX :MEASure:ADVanced:STATistics:AIMLimit <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

QUERY SYNTAX :MEASure:ADVanced:STATistics:AIMLimit?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the statistics aim limit to 500.

Command message:

:MEASure:ADVanced:STATistics: AIMLimit 500

MEAS:ADV:STAT:AIML 500

Query message:

MEAS:ADV:STAT:AIML?

Response message:

500

RELATED COMMANDS :MEASure:ADVanced:P<n>:STATistics

:MEASure:ADVanced:STATistics:HISTOGram

Command/Query

DESCRIPTION The command sets the state of the histogram function.

This query returns the current state of the histogram function.

COMMAND SYNTAX :MEASure:ADVanced:STATistics:HISTOGram <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MEASure:ADVanced:STATistics:HISTOGram?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables histogram function.

Command message:

:MEASure:ADVanced:STATistics:HISTOGram ON

MEAS:ADV:STAT:HISTOG ON

Query message:

MEAS:ADV:STAT:HISTOG?

Response message:

ON

RELATED COMMANDS :MEASure:ADVanced:STATistics

:MEASure:ADVanced:STATistics:MAXCount

Command/Query

DESCRIPTION This command sets the maximum value of the statistics count.

The query returns the current value of statistics count.

COMMAND SYNTAX :MEASure:ADVanced:STATistics:MAXCount <value>

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 1024].

Note:

When the value is set to 0, it means unlimited statistics.

QUERY SYNTAX :MEASure:ADVanced:STATistics:MAXCount?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the maximum value of statistics

count to 1024.

Command message:

:MEASure:ADVanced:STATistics:MAXCount 1024

MEAS:ADV:STAT:MAXC 1024

Query message:

MEAS:ADV:STAT:MAXC?

Response message:

1024

RELATED COMMANDS :MEASure:ADVanced:STATistics

:MEASure:ADVanced:STATistics:RESet

Command

DESCRIPTION The command resets the measurement statistics.

COMMAND SYNTAX :MEASure:ADVanced:STATistics:RESet

EXAMPLE The following command restarts statistics.

Command message:

:MEASure:ADVanced:STATistics:RESet

MEAS:ADV:STAT:RES

RELATED COMMANDS :MEASure:ADVanced:STATistics

:MEASure:ADVanced:STYLe

Command/Query

DESCRIPTION The command selects the display mode of the advanced

measurements.

This query returns the current display mode of the advanced

measurement.

COMMAND SYNTAX :MEASure:ADVanced:STYLe <type>

<type>:= {M1|M2}

◆ M1 lists a measurement, corresponding statistics, and

histogram vertically on the display.

M2 lists a measurement and corresponding statistics

horizontally on the display. No histogram is available with

M2.

QUERY SYNTAX :MEASure:ADVanced:STYLe?

RESPONSE FORMAT <type>

 $<type>:= {M1|M2}$

EXAMPLE The following command selects the display mode of the

advanced measurement to M1.

Command message:

:MEASure:ADVanced:STYLe M1

MEAS:ADV:STYL M1

Query message: MEAS:ADV:STYL?

Response message:

M1

:MEASure:ASTRategy

Command/Query

DESCRIPTION The command sets the mode of amplitude calculation strategy.

This query returns the current mode of the amplitude

calculation strategy.

COMMAND SYNTAX :MEASure:ASTRategy <type>

<type>:= {AUTO|MANual}

◆ AUTO sets the amplitude calculation strategy will be selected automatically according to the input signal to ensure theaccuracy of the measured value.

 MANual sets the amplitude calculation strategy will be selected manually.

QUERY SYNTAX :MEASure:ASTRategy?

RESPONSE FORMAT <type>

<type>:= {AUTO|MANual}

EXAMPLE The following command selects the amplitude calculation

strategy to MAMual.

Command message:

:MEASure:ASTRategy MANual

MEAS:ASTR MAN

Query message:

MEAS:ASTR?

Response message:

MANual

:MEASure:ASTRategy:BASE

Command/Query

DESCRIPTION The command sets the mode of amplitude calculation base

strategy.

This query returns the current mode of the amplitude

calculation base strategy.

COMMAND SYNTAX :MEASure:ASTRategy:BASE <type>

<type>:= {HISTogram|MIN}

 HISTogram sets the amplitude calculation base strategy will identify the value with the maximum probability as the

base value.

 MIN sets the amplitude calculation top strategy will identify the minimum value of the waveform as the base

value.

QUERY SYNTAX :MEASure:ASTRategy:BASE?

RESPONSE FORMAT <type>

<type>:= {HISTogram|MIN}

EXAMPLE The following command selects the amplitude calculation base

strategy to Histogram.

Command message:

:MEASure:ASTRategy:BASE HISTogram

MEAS:ASTR:BASE HIST

Query message: MEAS:ASTR:BASE?

Response message:

HISTogram

:MEASure:ASTRategy:TOP

Command/Query

DESCRIPTION The command sets the mode of amplitude calculation top

strategy.

This query returns the current mode of the amplitude

calculation top strategy.

COMMAND SYNTAX :MEASure:ASTRategy:TOP <type>

<type>:= {HISTogram|MAX}

 HISTogram sets the amplitude calculation top strategy will identify the value with the maximum probability as the top

value.

 MAX sets the amplitude calculation top strategy will identify the maximum value of the waveform as the top

value.

QUERY SYNTAX :MEASure:ASTRategy:TOP?

RESPONSE FORMAT <type>

<type>:= {HISTogram|MAX}

EXAMPLE The following command selects the amplitude calculation top

strategy to Histogram.

Command message:

:MEASure:ASTRategy:TOP HISTogram

MEAS:ASTR:TOP HIST

Query message: MEAS:ASTR:TOP?

Response message:

HISTogram

:MEASure:DITMe<n>:EDGE1

Command/Query

DESCRIPTION This command sets the starting edge of the specified delta

time.

This query returns the starting edge of the specified delta time.

COMMAND SYNTAX :MEASure:DITMe<n>:EDGE1 <value>

<n>:= delta time index, the range is [1,4]

<value>:= start edge in NR1 format. The value range is limited
by the AIM limit. When set to -1, it indicates the last edge

QUERY SYNTAX :MEASure:DITMe<n>:EDGE1?

RESPONSE FORMAT <value>

EXAMPLE The following command sets the starting edge of delta time1

as the last edge.

Command message:

:MEASure:DITMe1:EDGE1 -1 MEAS:DITM1:EDGE1 -1

Query message:

MEAS:DITM1:EDGE1?

Response message:

-1

RELATED COMMANDS :MEASure:ADVanced:STATistics:AIMLimit

:MEASure:DITMe<n>:EDGE2

:MEASure:DITMe<n>:EDGE2

Command/Query

DESCRIPTION This command sets the end edge of the specified delta time.

This query returns the end edge of the specified delta time.

COMMAND SYNTAX :MEASure:DITMe<n>:EDGE2 <value>

<n>:= delta time index, the range is [1,4].

<value>:= end edge in NR1 format. The value range is limited
by the AIM limit. When set to -1, it indicates the last edge

QUERY SYNTAX :MEASure:DITMe<n>:EDGE2?

RESPONSE FORMAT <value>

EXAMPLE The following command sets the end edge of delta time 1 as

the last edge.

Command message:

:MEASure:DITMe1:EDGE2 -1 MEAS:DITM1:EDGE2 -1

Query message:

MEAS:DITM1:EDGE2?

Response message:

-1

RELATED COMMANDS :MEASure:ADVanced:STATistics:AIMLimit

:MEASure:DITMe<n>:EDGE1

:MEASure:DITMe<n>:SLOPe1

Command/Query

DESCRIPTIONThis command sets the start edge slope type of the specified

delta time.

This query returns the start edge slope type of the specified

delta time.

COMMAND SYNTAX :MEASure:DITMe<n>:SLOPe1 <slope_type>

<n>:= delta time index, the range is [1,4]

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :MEASure:DITMe<n>:SLOPe1?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the start edge slope of delta

time1 to RISing.

Command message:

:MEASure:DITMe1:SLOPe1 RISing

MEAS:DITM1:SLOP1 RIS

Query message:

MEAS:DITM1:SLOP1?

Response message:

RISing

RELATED COMMANDS :MEASure:DITMe<n>:SLOPe2

:MEASure:DITMe<n>:SLOPe2

Command/Query

DESCRIPTION This command sets the end edge slope type of the specified

delta time.

This query returns the end edge slope type of the specified

delta time.

COMMAND SYNTAX :MEASure:DITMe<n>:SLOPe2 <slope_type>

<n>:= delta time index, the range is [1,4].

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :MEASure:DITMe<n>:SLOPe2?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the end edge slope of delta time1

to RISing.

Command message:

:MEASure:DITMe1:SLOPe2 RISing

MEAS:DITM1:SLOP2 RIS

Query message:

MEAS:DITM1:SLOP2?

Response message:

RIS

RELATED COMMANDS :MEASure:DITMe<n>:SLOPe1

:MEASure:DITMe<n>:THReshold1

Command/Query

DESCRIPTIONThis command sets the threshold type for the start edge of the

specified delta time.

This query returns the threshold type for the start edge of the

specified delta time.

COMMAND SYNTAX :MEASure:DITMe<n>:THReshold1 <type>

<n>:= delta time index, the range is [1,4].

<type>:= {UPPer|MIDDle|LOWer}

QUERY SYNTAX :MEASure:DITMe<n>:THReshold1?

RESPONSE FORMAT <type>

<type>:= {UPPer|MIDDle|LOWer}

EXAMPLE The following command sets the threshold type of the start

edge of delta time1 to UPPer.

Command message:

:MEASure:DITMe1:THReshold1 UPPer

MEAS:DITM1:THR1 UPP

Query message:

MEAS:DITM1:THR1?

Response message:

UPPer

RELATED COMMANDS :MEASure:DITMe<n>:THReshold2

:MEASure:DITMe<n>:THReshold2

Command/Query

DESCRIPTION This command sets the threshold type for the end edge of the

specified delta time.

This query returns the threshold type for the end edge of the

specified delta time.

COMMAND SYNTAX :MEASure:DITMe<n>:THReshold2 <type>

<n>:= delta time index, the range is [1,4].

<type>:= {UPPer|MIDDle|LOWer}

QUERY SYNTAX :MEASure:DITMe<n>:THReshold2?

RESPONSE FORMAT <type>

<type>:= {UPPer|MIDDle|LOWer}

EXAMPLE The following command sets the threshold type of the end

edge of delta time1 to UPPer.

Command message:

:MEASure:DITMe1:THReshold2 UPPer

MEAS:DITM1:THR2 UPP

Query message:

MEAS:DITM1:THR2?

Response message:

UPPer

RELATED COMMANDS :MEASure:DITMe<n>:THReshold1

:MEASure:GATE

Command/Query

DESCRIPTION This command sets the state of the measurement gate.

This query returns the current state of the measurement gate.

COMMAND SYNTAX :MEASure:GATE <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MEASure:GATE?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the measurement gate.

Command message: :MEASure:GATE ON MEAS:GATE ON

Query message: *MEAS:GATE?*

Response message:

ON

RELATED COMMANDS :MEASure:GATE:GA

:MEASure:GATE:GB

:MEASure:GATE:GA

Command/Query

DESCRIPTION This command sets the position of gate A.

This query returns the current position of gate A.

COMMAND SYNTAX :MEASure:GATE:GA <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is

[-horizontal_grid/2*timebase, horizontal_grid/2*timebase].

Note:

The value of GA cannot be greater than that of GB. If you set the value greater than GB, it will automatically be set to the

same value as GB.

QUERY SYNTAX :MEASure:GATE:GA?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the position of gate A to -100 ns.

Command message:

:MEASure:GATE:GA -1.00E-07 MEAS:GATE:GA -1.00E-07

Query message: MEAS:GATE:GA?

Response message:

-1.00E-07

RELATED COMMANDS :MEASure:GATE

:MEASure:GATE:GB

:MEASure:GATE:GB

Command/Query

DESCRIPTION This command sets the position of gate B.

This command returns the current position of gate B.

COMMAND SYNTAX :MEASure:GATE:GB <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2. The range of the value is

[-horizontal_grid/2*timebase, horizontal_grid/2*timebase].

Note:

The value of GB cannot be less than that of GA. If you set the value less than GA, it will automatically be set to the same

value as GA.

QUERY SYNTAX :MEASure:GATE:GB?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the position of gate B to 100 ns.

Command message:

:MEASure:GATE:GB 1.00E-07 MEAS:GATE:GB 1.00E-07

Query message: MEAS:GATE:GB?

Response message:

1.00E-07

RELATED COMMANDS :MEASure:GATE

:MEASure:GATE:GA

:MEASure:MODE

Command/Query

DESCRIPTION The command specifies the mode of measurement.

The query returns the current mode of measurement.

COMMAND SYNTAX :MEASure:MODE <type>

<type>:= {SIMPle|ADVanced}

SIMPle shows measurements only

 ADVanced shows measurements and includes selections for statistics, view mode (M1, M2), histogram, and

trending.

QUERY SYNTAX :MEASure:MODE?

RESPONSE FORMAT <type>

<type>:= {SIMPle|ADVanced}

EXAMPLE The following command sets the measurement mode to

simple.

Command message: :MEASure:MODE SIMPle

MEAS:MODE SIMP

Query message: *MEAS:MODE?*

Response message:

SIMPle

:MEASure:RDISplay

Command/Query

DESCRIPTION The command sets the display style of measurement results.

The query returns the display style of measurement results.

COMMAND SYNTAX

:MEASure:RDISplay <type>

<type>:= {EMBedded|FLOating}

 EMBedded means that the measurement results are embedded in the screen, which compresses the waveform area.

 FLOating means that the measurement results are suspended on the screen and will not compress the waveform area.

QUERY SYNTAX

:MEASure:RDISplay?

RESPONSE FORMAT

<type>

<type>:= {EMBedded|FLOating}

EXAMPLE

The following command sets the measurement result display style to FLOating.

Command message:

:MEASure:RDISplay FLOating

MEAS:RDIS FLO

Query message: MEAS:RDIS?

Response message:

FLOating

:MEASure:SIMPle:CLEar

Command

DESCRIPTION The command clears all the simple measurement item.

COMMAND SYNTAX :MEASure:SIMPle:CLEar

EXAMPLE The following command clears the simple measurement item.

Command message: :MEASure:SIMPle:CLEar

MEAS:SIMP:CLE

RELATED COMMANDS :MEASure:SIMPle:ITEM

:MEASure:SIMPle:ITEM

Command

DESCRIPTION This command sets the type of simple measurement.

COMMAND SYNTAX :MEASure:SIMPle:ITEM <parameter>,<state>

<parameter>:=

{PKPK|MAX|MIN|AMPL|TOP|BASE|LEVELX|CMEAN|MEAN|STDEV|VSTD|RMS|CRMS|MEDIAN|CMEDIAN|OVSN|ULOWer|FPRE|OVSP|RPRE|PER|FREQ|TMAX|TMIN|PWID|NWID|DUTY|NDUTY|WID|NBWID|DELAY|TIMEL|RISE|FALL|RISE20T80|FALL80T20|CCJ|PAREA|NAREA|AREA|ABSAREA|CYCLES|REDGES|FDGES|EDGES|PPULSES|NPULSES|PACArea|

NACArea|ACArea|ABSACArea}

<state>:= {ON|OFF}

Note:

See the table Description of Parameters

Description of Parameters Description of Parameters Description of Parameters Description of Parameters

EXAMPLE The following command adds maximum to the simple

measurements window.

Command message:

:MEASure:SIMPle:ITEM MAX,ON MEAS:SIMP:ITEM MAX,ON

RELATED COMMANDS :MEASure:SIMPle:VALue

:MEASure:SIMPle:SOURce

Command/Query

DESCRIPTION

This command sets the source of the simple measurement.

This query returns the current source of the simple measurement.

COMMAND SYNTAX

:MEASure:SIMPle:SOURce <source>

<source>:= {C<n>|Z<n>|F<x>|ZF<x>|M<m>|ZM<m>|
D<d>|ZD<d>|REF<r>}

- C denotes an analog channel.
- Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- D denotes a digital channel.
- REF denotes a reference waveform.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an integer and no decimal point, like 1.

 $< r > := {A|B|C|D}$

Note:

Z<n>, ZF<x>, ZM<m> and ZD<d> are optional only when Zoom is on.

QUERY SYNTAX

:MEASure:SIMPle:SOURce?

RESPONSE FORMAT

<source>

 $\label{eq:convex} $$\sup_z {C<n>|Z<n>|F<x>|ZF<x>|M<m>|ZM<m>|}$$ D<d>|ZD<d>|REF<r>}$

EXAMPLE

The following command sets the source of simple measurement to C1.

Command message:

:MEASure:SIMPle:SOURce C1 MEAS:SIMP:SOUR C1

Query message:

MEAS:SIMP:SOUR?

Response message:

C1

:MEASure:SIMPle:VALue

Query

DESCRIPTION

This query returns the specified measurement value that

appears on the simple measurement.

QUERY SYNTAX

:MEASure:SIMPle:VALue? <type>

<type>:=

{PKPK|MAX|MIN|AMPL|TOP|BASE|LEVELX|CMEAN|MEAN|STDEV|VSTD|RMS|CRMS|MEDIAN|CMEDIAN|OVSN|FPRE|OVSP|RPRE|ULOWer|PER|FREQ|TMAX|TMIN|PWID|NWID|DUTY|NDUTY|WID|NBWID|DELAY|TIMEL|RISE|FALL|RISE20T80|FALL80T20|CCJ|PAREA|NAREA|AREA|ABSAREA|CYCLES|REDGES|FEDGES|EDGES|PPULSES|NPULSES|PACArea|NACArea|ACArea|ABSACArea|ALL}

Note:

See the table Description of Parameters

Description of Parameters Description of Parameters

 ALL is only valid for queries, and it returns all measurement values of all measurement types except for delay measurements.

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE

The following query returns the maximum value.

Query message:

MEAS:SIMP:VAL? MAX

Response message:

2.000E+00

RELATED COMMANDS

:MEASure:SIMPle:ITEM

:MEASure:THReshold:SOURce

Command/Query

DESCRIPTION

This command sets the measurement threshold source.

This query returns the current measurement threshold source.

COMMAND SYNTAX

:MEASure:THReshold:SOURce <source>

<source>:= $\{C<n>|Z<n>|F<x>|ZF<x>|M<m>|ZM<m>|REF<r><math>\}$

- C denotes an analog channel.
- ◆ Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- REF denotes a reference waveform.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

 $< r > := {A|B|C|D}$

Note

Z<n>, ZF<x> and ZM<m> is optional only when Zoom is on.

QUERY SYNTAX

:MEASure:THReshold:SOURce?

RESPONSE FORMAT

<source>:= {C<n>|Z<n>|F<x>|ZF<x>|M<m>|ZM<m>|REF<r>}

EXAMPLE

The following command sets the threshold source to C1.

Command message:

:MEASure:THReshold:SOURce C1

MEAS:THR:SOUR C1

Query message:

MEAS:THR:SOUR?

Response message:

C1

:MEASure:THReshold:TYPE

Command/Query

DESCRIPTION This command sets the measurement threshold type.

This query returns the current measurement threshold type.

COMMAND SYNTAX :MEASure:THReshold:TYPE <type>

<type>:= {PERCent|ABSolute}

QUERY SYNTAX :MEASure:THReshold:TYPE?

RESPONSE FORMAT <type>

<type>:= {PERCent|ABSolute}

EXAMPLE The following command sets the threshold typr to percent.

Command message:

:MEASure:THReshold:TYPE PERCent

MEAS:THR:TYPE PERC

Query message: MEAS:THR:TYPE?

Response message:

PERCent

:MEASure:THReshold:ABSolute

Command/Query

DESCRIPTION This command specifies the reference level

when :MEASure:THReshold:TYPE is set to ABSolute.This command affects the results of some measurements.

This query returns the reference level of the source

COMMAND SYNTAX :MEASure:THReshold:ABSolute <high>,<mid>,<low>

<high>,<mid>,<low>:= Value in NR3 format, including a

decimal point and exponent, like 1.23E+2.

QUERY SYNTAX :MEASure:THReshold:ABSolute?

RESPONSE FORMAT <high>,<mid>,<low>

<high>,<mid>,<low>:= Value in NR3 format, including a

decimal point and exponent, like 1.23E+2.

EXAMPLE The following command sets the upper, middle and lower

threshold to 3V,1V,-1.5V.

Command message:

:MEASure:THReshold:ABSolute 3.00,1.00,-1.50

MEAS:THR:ABS 3.00,1.00,-1.50

Query message: MEAS:THR:ABS?

Response message:

3.00 E+00,1.00 E+00,-1.50E+00

RELATED COMMANDS :MEASure:THReshold:TYPE

:MEASure:SIMPle:ITEM

:MEASure:THReshold:PERCent

Command/Query

DESCRIPTION This command specifies the percent used to calculate the

reference level when :MEASure:THReshold:TYPE is set to PERCent. This command affects the results of some

measurements.

COMMAND SYNTAX :MEASure:THReshold:PERCent <high>,<mid>,<low>

<high>,<mid>,<low>:= Value in NR1 format, including an

integer and no decimal point, like 10

QUERY SYNTAX :MEASure:THReshold:PERCent?

RESPONSE FORMAT <high>,<mid>,<low>

<high>,<mid>,<low>:= Value in NR1 format, including an

integer and no decimal point, like 10

EXAMPLE The following command sets the upper, middle and lower

threshold to 80%,45%,10%.

Command message:

:MEASure:THReshold:PERCent 80,45,10

MEAS:THR:PERC 80,45,10

Query message: MEAS:THR:PERC?

Response message:

80,45,10

RELATED COMMANDS :MEASure:SIMPle:ITEM

MEMory Commands

The MEMory subsystem commands control memory waveforms.

- :MEMory<m>:HORizontal:POSition
- :MEMory<m>:HORizontal:SCALe
- :MEMory<m>:HORizontal:SYNC
- :MEMory<m>:IMPort
- :MEMory<m>:LABel
- :MEMory<m>:LABel:TEXT
- :MEMory<m>:SWITch
- :MEMory<m>:VERTical:POSition
- :MEMory<m>:VERTical:SCALe

:MEMory<m>:HORizontal:POSition

Command/Query

DESCRIPTION The command specifies the horizontal position of the memory

waveform.

The query returns the current horizontal position of the

memory.

COMMAND SYNTAX :MEMory<m>:HORizontal:POSition <val>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<val>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :MEMory<m>:HORizontal:POSition?

RESPONSE FORMAT <val>

<val>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command specifies a 10 us delay of M2 to the

trigger point.

Command message:

:MEMory2:HORizontal:POSition 1.00E-05

MEM2:HOR:POS 1.00E-05

Query message: MEM2:HOR:POS?

Response message:

1.00E-05

:MEMory<m>:HORizontal:SCALe

Command/Query

DESCRIPTION The command sets the horizontal scale per division for the

memory waveform.

The query returns the current horizontal scale setting in

seconds per division for the memory.

COMMAND SYNTAX :MEMory<m>:HORizontal:SCALe <value>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :MEMory<m>:HORizontal:SCALe?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command horizontal scale of M2 to 100 ns/div.

Command message:

:MEMory2:HORizontal:SCALe 1.00E-07

MEM2:HOR:SCAL 1.00E-07

Query message: MEM2:HOR:SCAL?

Response message:

1.00E-07

:MEMory<m>:HORizontal:SYNC

Command/Query

DESCRIPTION The command turns on and off the horizontal parameter

synchronization switch. When enabled, modify the horizontal parameters of the imported source, and the parameters of its memory waveform will also be modified synchronously.

This query returns the current state of the horizontal parameter

synchronization switch.

COMMAND SYNTAX :MEMory<m>:HORizontal:SYNC <state>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {ON|OFF}

QUERY SYNTAX :MEMory<m>:HORizontal:SYNC?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the horizontal parameter

synchronization switch of M2.

Command message:

:MEMory2:HORizontal:SYNC ON

MEM2:HOR:SYNC ON

Query message: MEM2:HOR:SYNC?

Response message:

ON

:MEMory<m>:IMPort

Command

DESCRIPTION

The command import the source to the memory waveform.

COMMAND SYNTAX

:MEMory<m>:IMPort <source>

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

<source>:= {C<n>|Z<n>|F<x>|M<m>|<path>}

- C denotes an analog channel.
- Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- <path>:= Quoted string of path with an extension ".bin", denotes a waveform file.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<m>:= 1 to (# memory waveforms) in NR1 format, including an integer and no decimal point, like 1.

EXAMPLE

The following command imports waveform of C2 to the M2.

Command message:

:MEMory2:IMPort C2 MEM2:IMP C2

:MEMory<m>:LABel

Command/Query

DESCRIPTION The command is to turn the specified memory label on or off.

This query returns the label associated with a particular

memory function.

COMMAND SYNTAX :MEMory<m>:LABel <state>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {ON|OFF}

QUERY SYNTAX :MEMory<m>:LABel?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the label of M2.

Command message: :MEMory2:LABel ON MEM2:LAB ON

Query message: *MEM2:LAB?*

Response message:

ON

:MEMory<m>:LABel:TEXT

Command/Query

DESCRIPTION The command sets the selected memory label to the string

that follows. Setting a label for a memory waveform also adds the name to the label list in non-volatile memory (replacing the

oldest label in the list)

The query returns the current label text of the selected

memory waveform.

COMMAND SYNTAX :MEMory<m>:LABel:TEXT <string>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<string>:= Quoted string of ASCII text. The length of the string

is limited to 20.

QUERY SYNTAX :MEMory<m>:LABel:TEXT?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the label text of the M2 to

"MATH".

Command message:

:MEMory2:LABel:TEXT "MATH" MEM2:LAB:TEXT "MATH"

Query message: MEM2:LAB:TEXT?

Response message:

"MATH"

:MEMory<m>:SWITch

Command

DESCRIPTION The command sets the display of the memory waveform.

This query returns the current display of the memory

waveform.

COMMAND SYNTAX :MEMory<m>:SWITch <state>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<state>:= {ON|OFF}

QUERY SYNTAX :MEMory<m>:SWITch?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the display of the M2.

Command message: :MEMory2:SWITch ON

MEM2:SWIT ON

Query message: *MEM2:SWIT?*

Response message:

ON

:MEMory<m>:VERTical:POSition

Command/Query

DESCRIPTION The command the vertical position of the selected memory

waveform.

This query returns the current position value for the selected

memory.

COMMAND SYNTAX :MEMory<m>:VERTical:POSition <offset>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<offset>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :MEMory<m>:VERTical:POSition?

RESPONSE FORMAT <offset>

<offset>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command changes the vertical position of M2

waveform to 100m V.

Command message:

:MEMory2:VERTical:POSition 1.00E-01

MEM2:VERT:POS 1.00E-01

Query message: MEM2:VERT:POS?

Response message:

1.00E-01

:MEMory<m>:VERTical:SCALe

Command/Query

DESCRIPTION The command sets the vertical scale of the selected memory

waveform.

The query returns the current scale value for the selected

memory waveform.

COMMAND SYNTAX :MEMory<m>:VERTical:SCALe <scale>

<m>:= 1 to (# memory waveforms) in NR1 format, including an

integer and no decimal point, like 1.

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

QUERY SYNTAX :MEMory<m>:VERTical:SCALe?

RESPONSE FORMAT <scale>

<scale>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command changes the vertical scale of M2

waveform to 100m V.

Command message:

:MEMory2:VERTical:SCALe 1.00E-01

MEM2:VERT:SCAL 1.00E-01

Query message: MEM2:VERT:SCAL?

Response message:

1.00E-01

MTEst Commands

The :MTEst subsystem commands control the mask test features.

- :MTESt
- :MTESt:COUNt
- :MTESt:FUNCtion:BUZZer
- :MTESt:FUNCtion:COF
- :MTESt:FUNCtion:FTH
- :MTESt:FUNCtion:SOF
- ◆ :MTESt:IDISplay
- :MTESt:MASK:CREate
- :MTESt:MASK:LOAD
- :MTESt:OPERate
- :MTESt:RESet
- :MTESt:SOURce
- :MTESt:TYPE

:MTESt

Command/Query

DESCRIPTION The command sets the state of the mask test.

This query returns the current state of the mask test.

COMMAND SYNTAX :MTESt <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MTESt?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the mask test function.

Command message:

:MTESt ON MTES ON

Query message:

MTES?

Response message:

ON

:MTESt:COUNt

Query

DESCRIPTION The query returns the result of the mask test.

QUERY SYNTAX :MTESt:COUNt?

RESPONSE FORMAT FAIL,<num>,PASS,<num>,TOTAL,<num>

<num>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command returns the count of the mask test.

Query message: MTES:COUN?

Response message:

FAIL,38176,PASS,5617,TOTAL,43793

RELATED COMMANDS :MTESt:OPERate

:MTESt:FUNCtion:BUZZer

Command/Query

DESCRIPTION This command sets the state of the buzzer when failure frames

are detected.

This command query returns the status of the buzzer.

COMMAND SYNTAX :MTESt:FUNCtion:BUZZer <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MTESt:FUNCtion:BUZZer?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the buzzer.

Command message:

:MTESt:FUNCtion:BUZZer ON MTES:FUNC:BUZZ ON

Query message: *MTES:FUNC:BUZZ?*

Response message:

ON

:MTESt:FUNCtion:COF

Command/Query

DESCRIPTION This command sets the state of the mask test function

"Capture on Fail". When this function is enabled, the default path to save the image of failing frames is "SIGLENT/".

This command query returns the status of "Capture on Fail".

COMMAND SYNTAX :MTESt:FUNCtion:COF <state>

<state>:= {OFF|ON}

QUERY SYNTAX :MTESt:FUNCtion:COF?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on the Capture on Fail and

saves the screenshot to the U disk path "SIGLENT/".

Command message:

:MTESt:FUNCtion:COF ON MTES:FUNC:COF ON

Query message: MTES:FUNC:COF?

Response message:

ON

:MTESt:FUNCtion:FTH

Command/Query

DESCRIPTION This command sets the state of the mask test function "Failure

to History".

This command query returns the status of "Failure to History".

COMMAND SYNTAX :MTESt:FUNCtion:FTH <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MTESt:FUNCtion:FTH?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables Failure to History.

Command message:

:MTESt:FUNCtion:FTH ON MTES:FUNC:FTH ON

Query message: MTES:FUNC:FTH?

Response message:

ON

RELATED COMMANDS :MTESt:OPERate

:MTESt:FUNCtion:SOF

Command/Query

DESCRIPTIONThis command sets the state of the mask test function "Stop-

on-Fail".

This command query returns the status of "Stop- on-Fail".

COMMAND SYNTAX :MTESt:FUNCtion:SOF <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MTESt:FUNCtion:SOF?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables Stop-on-Fail.

Command message:

:MTESt:FUNCtion:SOF ON MTES:FUNC:SOF ON

Query message: MTES:FUNC:SOF?

Response message:

ON

:MTESt:IDISplay

Command/Query

DESCRIPTION This command sets the state of the mask test result display.

This command query returns the status of the mask test result

display.

COMMAND SYNTAX :MTESt:IDISplay <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MTESt:IDISplay?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the display of the mask test.

Command message: :MTESt:IDISplay ON MTES:IDIS ON

Query message: MTES:IDIS?

Response message:

ON

RELATED COMMANDS :MTESt:COUNt

:MTESt:MASK:CREate

Command

DESCRIPTION This command sets the mask X and mask Y of mask test.

COMMAND SYNTAX :MTESt:MASK:CREate <XMARgin>,<YMARgin>

<XMARgin>:= Value in NR2 format. The range of the value is

[0.08, 4.00]

<YMARgin>:= Value in NR2 format. The range of the value is

[0.08, 4.00]

EXAMPLE The following command sets the mask X to 0.8, the mask Y to

0.08.

Command message:

:MTESt:MASK:CREate 0.8,0.08 MTES:MASK:CRE 0.8,0.08

:MTESt:MASK:LOAD

Command

DESCRIPTION

COMMAND SYNTAX

The command recalls the mask from internal or external memory locations.

:MTESt:MASK:LOAD < location>

<location>:= {INTernal,<num>|EXTernal,<path>}

- INTernal: the previous version supported saving masks internally by index. You can load these masks that has been saved in a previous version by specifying the parameter as INTernal.
 <num>:= {1|2|3|4}
- EXTernal: load the mask by specifying <path>.
 <path>:= Quoted string of path name with an extension ".msk" or ".smsk". Users can recall from local, net storage or U-disk according to requirements.

| Path type | Such as |
|-------------|--|
| local | "local/SIGLENT/test.msk" |
| net storage | "net_storage/SIGLENT/test.smsk" |
| U-disk | "U-disk0/SIGLENT/test.msk" "U-disk1/SIGLENT/test.smsk" |

Note

The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

The following command recalls the mask from internal 1 which file name is SDS0001.msk.

Command message:

:MTESt:MASK:LOAD INTernal,1 MTES:MASK:LOAD INT,1

:MTES:MASK:LOAD EXTernal,"local/SIGLENT/SDS0001.msk" MTES:MASK:LOAD EXT,"local/SIGLENT/SDS0001.msk"

The following command recalls the mask from U-disk0 named "TEST.msk".

Command message:

MTES:MASK:LOAD EXTernal, "SIGLENT/TEST.msk"

EXAMPLE

:MTESt:OPERate

Command/Query

DESCRIPTION This command sets the state of the mask test operation.

This command query returns the status of the mask test

operation.

COMMAND SYNTAX :MTESt:OPERate <state>

<state>:= {ON|OFF}

QUERY SYNTAX :MTESt:OPERate?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the operation of the mask

test.

Command message: :MTESt:OPERate ON MTES:OPER ON

Query message: MTES:OPER?

Response message:

ON

:MTESt:RESet

Command

DESCRIPTION This command resets the mask test.

COMMAND SYNTAX :MTESt:RESet

EXAMPLE The following command resets the mask test.

Command message:

:MTESt:RESet MTES:RES

RELATED COMMANDS :MTESt:OPERate

:MTESt:SOURce

Command/Query

DESCRIPTION This command specifies the source of the mask test.

The query returns the current source of the mask test.

COMMAND SYNTAX

:MTESt:SOURce <source>

<source>:= {C<n>|Z<n>}

C denotes an analog channel.Z denotes a zoomed source.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

Note:

Only Z<n> can be selected when Zoom is on.

QUERY SYNTAX :MTESt:SOURce?

RESPONSE FORMAT <source>

<source>:= $\{C<$ n>|Z<n> $\}$

EXAMPLE The following command sets the source of the mask test

source as C1.

Command message: :MTESt:SOURce C1

MTES:SOUR C1

Query message: MTES:SOUR?

Response message:

C1

:MTESt:TYPE

Command/Query

DESCRIPTION

This command specifies the type of mask test.

The query returns the current type of mask test.

COMMAND SYNTAX

:MTESt:TYPE <type>

<type>:= {ALL_IN|ALL_OUT|ANY_IN|ANY_OUT}

- ALL_IN means that all of the waveform elements must fall within the mask area.
- ALL_OUT means that all of the waveform elements are all outside of the mask area.
- ANY_IN means that the waveform is partially within the mask area.
- ANY_OUT means that the waveform is partially outside the mask area.

QUERY SYNTAX

:MTESt:TYPE

RESPONSE FORMAT

<type

<type>:= {ALL_IN|ALL_OUT|ANY_IN|ANY_OUT}

EXAMPLE

The following command sets the type of the mask test source as all in.

Command message:

:MTESt:TYPE ALL_IN MTES:TYPE ALL_IN

Query message:

MTES:TYPE?

Response message:

ALL_IN

RECall Commands

The :RECall subsystem commands control the recall of setups or waveform data to the oscilloscope.

• :RECall:FDEFault

:RECall:REFerence

:RECall:SERase

• :RECall:SETup

:RECall:FDEFault

Command

DESCRIPTION This command recalls the factory settings.

COMMAND SYNTAX :RECall:FDEFault

EXAMPLE The following command recalls the factory settings.

Command message: :RECall:FDEFault

REC:FDEF

RELATED COMMANDS :RECall:SETup

:RECall:REFerence

Command

DESCRIPTION

This command recalls the specified waveform file from an external USB memory device and copies it to the selected reference waveform.

COMMAND SYNTAX

:RECall:REFerence <location>,<path>

<location>:= {REF<r>}

• REF denotes a reference waveform.

 $r>:= \{A|B|C|D\}$

<path>:= Quoted string of path with an extension ".ref"
Users can recall from local, net storage or U-disk according to requirements.

| Path type | Such as | |
|-------------|---|--|
| local | "local/SIGLENT/test.ref" | |
| net storage | "net_storage/SIGLENT/test.ref" | |
| U-disk | "U-disk0/SIGLENT/test.ref" "U-disk1/SIGLENT/test.ref" | |

Note:

The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

EXAMPLE

The following command recalls the waveform "SIGLENT/math.ref" from an external U-disk and applies it to REFD.

Int.siglent.com

Command message:

:RECall:REFerence REFD,"U-disk0/SIGLENT/math.ref" REC:REF REFD,"U-disk0/SIGLENT/math.ref"

RELATED COMMANDS

:SAVE:REFerence

396

:RECall:SERase

Command

DESCRIPTION This command deletes user defined files stored inside the

oscilloscope, includes reference waveforms, internal setups, internal mask files, custom default setups, the waveform files

copied from analog trace to AWG.

COMMAND SYNTAX :RECall:SERase

EXAMPLE The following command deletes user defined files stored

inside the oscilloscope.

Command message: :RECall:SERase REC:SER

:RECall:SETup

Command

DESCRIPTION

This command will recall the saved settings file from internal or external sources.

COMMAND SYNTAX

:RECall:SETup <state>

<state>:= {INTernal,<num>|EXTernal,<path>}

<num>:= Value in NR1 format, including an integer and no decimal point, like 1.The range of the value is [1,10].

<path>:= Quoted string of path with an extension ".xml". Users
can recall from local, net storage or U-disk according to
requirements.

| Path type | Such as | |
|-------------|-----------------------------------|--|
| local | "local/SIGLENT/default.xml" | |
| net storage | "net_storage/SIGLENT/default.xml" | |
| U-disk | "U-disk0/SIGLENT/default.xml" | |
| | "U-disk1/SIGLENT/default.xml" | |

Note:

- The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.
- If the storage path type is not specified, it is recall from Udisk0 by default

EXAMPLE

The following command recalls the settings from internal file "SDS00001.xml".

Command message:

:RECall:SETup INTernal,1 REC:SET INT,1

The following command recalls the settings from the external file "SIGLENT/default.xml".

Command message:

:RECall:SETup EXTernal,"U-disk0/SIGLENT/default.xml" REC:SET EXT,"SIGLENT/default.xml"

RELATED COMMANDS

:RECall:FDEFault :SAVE:SETup

REF Commands

The :REF<r> subsystem commands control the reference waveforms.

• :REF<r>:LABel

• :REF<r>:LABel:TEXT

+ :REF<r>:DATA

:REF<r>:DATA:SOURce

:REF<r>:DATA:SCALe

:REF<r>:DATA:POSition

:REF<r>:LABel

Command/Query

DESCRIPTION The command is to turn the specified reference label on or off.

The query returns the state of the label associated with the

specified reference.

COMMAND SYNTAX :REF<r>:LABel <state>

 $r>:= \{A|B|C|D\}$

<state>:= {ON|OFF}

QUERY SYNTAX :REF<r>:LABel?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the label display.

Command message: :REFA:LABel ON REFA:LAB ON

Query message: *REFA:LAB?*

Response message:

ON

RELATED COMMANDS :REF<r>:LABel:TEXT

:REF<r>:LABel:TEXT

Command/Query

DESCRIPTION The command sets the selected REF label to the string that

follows. Setting a label for a REF also adds the name to the label list in non-volatile memory (replacing the oldest label in

the list).

The query returns the current label text of the selected

reference waveform.

COMMAND SYNTAX :REF<r>:LABel:TEXT <string>

 $r>:= \{A|B|C|D\}$

<string>:= Quoted string of ASCII text. The length of the string

is limited to 20 characters.

QUERY SYNTAX :REF<r>:LABel:TEXT?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the reference waveform label text

to REFA.

Command message:

:REFA:LABel:TEXT "REFA" REFA:LAB:TEXT "REFA"

Query message: REFA:LAB:TEXT?

Response message:

"REFA"

RELATED COMMANDS :REF<r>:LABel

:REF<r>:DATA

Command

DESCRIPTION

The command controls the display and saving of reference waveforms.

COMMAND SYNTAX

:REF<r>:DATA <operation>

 $r>:= \{A|B|C|D\}$

<operation>:= {LOAD|UNLoad|SAVE,<source>}

- LOAD means to call up the reference waveform display.
- UNLoad means to turn off the reference waveform display.
- SAVE means to save the waveform to the reference waveform.

<source $>:= {C<n>|F<x>|D<d>}$

- C denotes an analog channel.
- F denotes a math function.
- D denotes a digital channel.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an integer and no decimal point, like 1.

EXAMPLE

The following command turns on REFA.

Command message:

:REFA:DATA LOAD REFA:DATA LOAD

402

:REF<r>:DATA:SOURce

Query

DESCRIPTION This query returns the source of the current reference channel.

QUERY SYNTAX :REF<r>:DATA:SOURce?

 $r>:= \{A|B|C|D\}$

RESPONSE FORMAT

<source>

D denotes a digital channel.

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an integer

and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

EXAMPLE The following query returns the source of REFA.

Query message:

REFA:DATA:SOUR?

Response message:

C1

:REF<r>:DATA:SCALe

Command/Query

DESCRIPTIONThe command sets the vertical scale of the current reference

channel. This command is only used when the current reference

channel has been stored, and the display state is on.

The query returns the vertical scale of the current reference

channel.

COMMAND SYNTAX :REF<r>:DATA:SCALe <value>

 $r>:= \{A|B|C|D\}$

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The scale range of the reference waveform is the same as that

of the reference source.

QUERY SYNTAX :REF<r>:DATA:SCALe?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE When the Reference function is on, and REFA has been saved,

the following command sets the vertical scale of REFA to 100

mV.

Command message:

:REFA:DATA:SCALe 1.00E-01

REFA:DATA:SCAL 1.00E-01

Query message:

REFA:DATA:SCAL?

Response message:

1.00E-01

RELATED COMMANDS :REF<r>:DATA:POSition

:REF<r>:DATA:POSition

Command/Query

DESCRIPTION The command sets the vertical offset of the current reference

channel. This command is only used when the current reference

channel has been saved, and the display state is on.

This query returns the vertical offset of the current reference

channel.

COMMAND SYNTAX :REF<r>:DATA:POSition <value>

 $r>:= \{A|B|C|D\}$

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The position range of the reference waveform is the same as

that of the reference source.

QUERY SYNTAX :REF<r>:DATA:POSition?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE When the Reference function is on, REFA has been saved and

the scale is 2 V, the following command sets the current

reference channel vertical offset to 0.2 V.

Command message:

:REFA:DATA:POSition 2.00E-01

REFA:DATA:POS 2.00E-01

Query message:

REFA:DATA:POS?

Response message:

2.00E-01

RELATED COMMANDS :REF<r>:DATA:SCALe

SAVE Commands

The SAVE subsystem commands control to save oscilloscope setups and waveform data to internal or external memory locations.

:SAVE:BINary

:SAVE:CSV

• :SAVE:DEFault

• :SAVE:IMAGe

:SAVE:MATLab

:SAVE:REFerence

• :SAVE:SETup

:SAVE:BINary

Command

DESCRIPTION

COMMAND SYNTAX

This command saves the binary data of the channel displayed on the screen to an external USB memory device.

:SAVE:BINary <path>,<src>

<path>:= Quoted string of path with an extension ".bin"
Users can save to local, net storage or U-disk according to
requirements

| Path type | Such as | |
|-------------|--------------------------|--|
| local | "local/SIGLENT/test.bin" | |
| net storage | "net_storage/test.bin" | |
| U-disk | "U-disk0/test.bin" | |

 $\sc= \{C < n > |Z < n > |F < x > |M < m > |D0 D15|ZD0 ZD15\}$

- C denotes an analog channel.
- ◆ Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- D0_D15 denotes a digital waveform. Data display by bit.
- ZD0_ZD15 denotes a zoomed digital waveform. Data display by bit.

Note:

- When save to internal, the default path is local.
- When save to external, if the path type is not set, it is stored to u-disk0 by default
- The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.
- If the parameter <src> is not specified, the command is invalid.

Here is an example of saving a file to an external drive when channel 1 is enabled. The following command will save their waveform data to the external file "c1.bin".

Command message:

:SAVE:BINary "U-disk0/Siglent/c1.bin",C1 SAVE:BIN "U-disk0/Siglent/c1.bin",C1

EXAMPLE

:SAVE:CSV

Command

DESCRIPTION

COMMAND SYNTAX

This command saves the waveform data of the specified channel to an external U disk/USB memory device in CSV format.

:SAVE:CSV <path>, <source>, <state>

<path>:= Quoted string of path with an extension ".csv".
Users can save to local, net storage or U-disk according to
requirements

| Path type | Such as | |
|-------------|--------------------------|--|
| local | "local/SIGLENT/test.csv" | |
| net storage | "net_storage/test.csv" | |
| U-disk | "U-disk0/test.csv" | |

<source>:=

 $\{C<n>|Z<n>|F<x>|M<m>|D0_D15|DIGital|ZD0_ZD15|ZDIGital\}$

- C denotes an analog channel.
- ◆ Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- D0 D15 denotes a digital waveform. Data display by bit.
- DIGital denotes a digital waveform. Data display by bus.
- ZD0_ZD15 denotes a zoomed digital waveform. Data display by bit.
- ZDIGital denotes a zoomed digital waveform. Data display by bus.

<state>:= {OFF|ON}

- ON enables parameter save. This adds vertical scale values, horizontal timebase settings, and more instrument configuration information to the file.
- OFF means to disables parameter save.

Note:

- When save to internal, the default path is local.
- When save to external, if the path type is not set, it is stored to u-disk0 by default
- The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

The following command saves data and parameters of channel 1 to the local file "local/SIGLENT/channel1.csv".

Command message:

:SAVE:CSV "local/SIGLENT/channel1.csv",C1,ON

EXAMPLE

:SAVE:DEFault

Command

DESCRIPTION This command saves the current settings or factory settings as

default settings.

COMMAND SYNTAX :SAVE:DEFault <set>

<set>:= {CUSTom|FACTory}

CUSTom means the current settings.

• FACTory means factory settings.

EXAMPLE The following command saves the current settings to default

settings.

Command message:

:SAVE:DEFault CUSTom

SAVE:DEF CUST

RELATED COMMANDS :RECall:SETup

:SAVE:IMAGe

Command

DESCRIPTION

This command saves the screenshot to external storage.

COMMAND SYNTAX

:SAVE:IMAGe <path>,<type>,<invert>[,<menu>]

<path>:= Quoted string of path with an extension ".bmp"
or ".jpg" or".png".

Users can save to local, net storage or U-disk according to requirements

| Path type | Such as | |
|-------------|--------------------------|--|
| local | "local/SIGLENT/test.bmp" | |
| net storage | "net_storage/test.jpg" | |
| U-disk | "U-disk0/test.png" | |

<type>:= {BMP|JPG|PNG}

<invert>:= {OFF|ON}

- ON will store images that have inverted colors. This
 means that a normally black background will be white
 when inverted. This setting is recommended if you plan on
 printing the image as an inverted image with a white
 background will save on ink.
- OFF will store images that are identical to the display of the instrument.

<menu>:= {MOFf|MON}

- MON will store images that include all menu information bars
- MOFf: images do not include the top menu, right menu, and bottom right time information bar

Note:

- When save to internal, the default path is local.
- When save to external, if the path type is not set, it is stored to u-disk0 by default
- The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

The following command saves the screenshot in BMP format to the external file "U-disk0/SIGLENT/screen.bmp" .

Command message:

:SAVE:IMAGe "U-disk0/SIGLENT/screen.bmp",BMP,ON SAVE:IMAG "U-disk0/SIGLENT/screen.bmp",BMP,ON

RELATED COMMANDS

EXAMPLE

:PRINt

410

:SAVE:MATLab

Command

DESCRIPTION

COMMAND SYNTAX

This command saves the waveform data of the specified channel to an external USB memory device in Matlab format.

:SAVE:MATLab <path>,<source>

<path>:= Quoted string of path with an extension ".mat".
Users can save to local, net storage or U-disk according to
requirements

| Path type | Such as | |
|-------------|--------------------------|--|
| local | "local/SIGLENT/test.mat" | |
| net storage | "net_storage/test.mat" | |
| U-disk | "U-disk0/test.mat" | |

<source>:={C<n>|Z<n>|F<x>|M<m>|D0_D15|DIGital|
ZD0 ZD15|ZDIGital}

- C denotes an analog channel.
- ◆ Z denotes a zoomed source.
- F denotes a math function.
- M denotes a memory waveform
- D0 D15 denotes a digital waveform. Data display by bit.
- ◆ DIGital denotes a digital waveform. Data display by bus.
- ZD0_ZD15 denotes a zoomed digital waveform. Data display by bit.
- ZDIGital denotes a zoomed digital waveform. Data display by bus.

Note:

- When save to internal, the default path is local.
- When save to external, if the path type is not set, it is stored to u-disk0 by default
- The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

The following command saves data of channel 1 to the external file "U-disk0/SIGLENT/channel1.mat".

Command message:

:SAVE:MATLab "U-disk0/SIGLENT/channel.mat",C1 SAVE:MATL "U-disk0/SIGLENT/channel.mat",C1

EXAMPLE

:SAVE:REFerence

Command

DESCRIPTION

This command saves the selected channel waveform to external memory as reference.

COMMAND SYNTAX

:SAVE:REFerence <path>,<source>

<path>:= Quoted string of path with an extension ".ref".
Users can save to local, net storage or U-disk according to
requirements

| Path type | Such as | |
|-------------|--------------------------|--|
| local | "local/SIGLENT/test.ref" | |
| net storage | "net_storage/test.ref" | |
| U-disk | "U-disk0/test.ref" | |

<source>:= {C<n>|F<x>|D<d>}

- C denotes an analog channel.
- F denotes a math function.
- D denotes a digital channel.

Note

The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

EXAMPLE

The following command saves the waveform of channel 1 as a reference to the local file "local/SIGLENT/channel.ref".

Command message:

:SAVE:REFerence "local/SIGLENT/channel.ref",C1 SAVE:REF "local/SIGLENT/channel.ref".C1

RELATED COMMANDS

:RECall:REFerence

:SAVE:SETup

Command

DESCRIPTION

This command saves the current settings to internal or external memory locations.

COMMAND SYNTAX

:SAVE:SETup <setup num>

<setup num>:= {INTernal,<num>|EXTernal,<path>}

<num>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1, 10].

<path>:= Quoted string of path with an extension ".xml". Users
can recall from local,net storage or U-disk according to
requirements

| Path type | Such as | |
|-------------|-----------------------------------|--|
| local | "local/SIGLENT/default.xml" | |
| net storage | "net_storage/SIGLENT/default.xml" | |
| U-disk | "U-disk0/SIGLENT/default.xml" | |

Note:

- When save to internal, the default path is local. And the setup file will be stored in local with the name "SDS000x.xml"
- When save to external, if the path type is not set, it is stored to u-disk0 by default
- The file format is not automatically determined by the file name extension. You need to choose a file name with an extension which is consistent with the selected file format.

EXAMPLE

There are two ways to save the current settings to internal file "SDS00001.xml".

Command message:

:SAVE:SETup INTernal,1 SAVE:SET INT,1

:SAVE:SETup EXTernal,"local/SDS00001.xml" :SAVE:SET EXT,"local/SDS00001.xml"

RELATED COMMANDS

:SAVE:DEFault :RECall:SETup

SEARch Commands

The :SEARch subsystem commands control the search functions of the oscilloscope.

- :SEARch
- :SEARch:MODE
- :SEARch:COUNt
- :SEARch:EVENt
- :SEARch:COPY
- :SEARch:EDGE Commands
- :SEARch:SLOPe Commands
- :SEARch:PULSe Commands
- :SEARch:INTerval Commands
- :SEARch:RUNT Commands

:SEARch

Command/Query

DESCRIPTION The command sets the switch of the search function.

This query returns the current status of the search function.

COMMAND SYNTAX :SEARch <state>

<state>:= {ON|OFF}

QUERY SYNTAX :SEARch?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the search function.

Command message:

:SEARch ON SEAR ON

Query message:

SEAR?

Response message:

ON

:SEARch:MODE

Command/Query

DESCRIPTION The command sets the mode of search.

The query returns the current mode of search.

COMMAND SYNTAX :SEARch:MODE < mode>

<mode>:= {EDGE|SLOPe|PULSE|INTerval|RUNT}

QUERY SYNTAX :SEARch:MODE?

RESPONSE FORMAT <mode>

<mode>:= {EDGE|SLOPe|PULSE|INTerval|RUNT}

EXAMPLE The following command sets the mode of search to edge

search.

Command message: :SEARch:MODE EDGE SEAR:MODE EDGE

Query message: SEAR:MODE?

Command message:

EDGE

:SEARch:COUNt

Query

DESCRIPTION The query returns the total number of search events in the

current screen.

QUERY SYNTAX :SEARch:COUNt?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following query returns the number of search events in the

current screen.

Query message: SEARch:COUNt? SEAR:COUN?

Response message:

10

:SEARch:EVENt

Query

DESCRIPTION The query returns the index of the search event in the center

of the screen when the oscilloscope acquisition is stopped.

QUERY SYNTAX :SEARch:EVENt?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following query returns the central event index.

Query message: SEARch:EVENt? SEAR:EVEN?

Response message:

5

:SEARch:COPY

Command

DESCRIPTION The command synchronizes the search settings with the

trigger settings.

COMMAND SYNTAX :SEARch:COPY <operation>

<operation>:= {FROMtrigger|TOTRigger|CANCel}

FROMtrigger means copy trigger settings to search.

TOTRigger means copy search settings to trigger.

CANCel can undo the above two copying operations.

EXAMPLE The following command copies the trigger settings to search.

Command message:

:SEARch:COPY FROMtrigger

SEAR:COPY FROM

:SEARch:EDGE Commands

The :SEARch:EDGE subsystem commands control the edge search parameters.

:SEARch:EDGE:SOURce

:SEARch:EDGE:SLOPe

:SEARch:EDGE:LEVel

:SEARch:EDGE:SOURce

Command/Query

DESCRIPTION The command sets the search source of the edge search.

The query returns the current search source of the edge

search.

COMMAND SYNTAX :SEARch:EDGE:SOURce <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :SEARch:EDGE:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the search source of the edge

search as C1.

Command message:

:SEARch:EDGE:SOURce C1 SEAR:EDGE:SOUR C1

Query message: SEAR:EDGE:SOUR?

Response message:

C1

RELATED COMMANDS :SEARch:EDGE:LEVel

:SEARch:EDGE:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the edge search.

The query returns the current slope setting of the edge search.

COMMAND SYNTAX :SEARch:EDGE:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing|ALTernate}

QUERY SYNTAX :SEARch:EDGE:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing|ALTernate}

EXAMPLE The following command set the rising slope to the edge

search.

Command message:

:SEARch:EDGE:SLOPe RISing

SEAR:EDGE:SLOP RIS

Query message:

SEAR:EDGE:SLOP?

Response message:

RISing

:SEARch:EDGE:LEVel

Command/Query

DESCRIPTION The command sets the search level of the edge search.

The query returns the current search level value of the edge

search.

COMMAND SYNTAX :SEARch:EDGE:LEVel <level_value>

<level_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

QUERY SYNTAX :SEARch:EDGE:LEVel?

RESPONSE FORMAT < level value>

<level_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

EXAMPLE The following command sets the search level of the edge

search to 0.5 V.

Command message:

:SEARch:EDGE:LEVel 5.00E-01 SEAR:EDGE:LEV 5.00E-01

Query message:

SEAR:EDGE:LEV?

Response message:

5.00E-01

RELATED COMMANDS :SEARch:EDGE:SOURce

Command/Query

DESCRIPTION The command sets the search source of the slope search.

The query returns the current search source of the slope

search.

COMMAND SYNTAX :SEARch:SLOPe:SOURce <source>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :SEARch:SLOPe:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>}

EXAMPLE The following command sets the search source of the slope

search to C2 (channel 2).

Command message:

:SEARch:SLOPe:SOURce C2

SEAR:SLOP:SOUR C2

Query message:

SEAR:SLOP:SOUR?

Response message:

C2

:SEARch:SLOPe:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the slope search.

The query returns the current slope of the slope search.

COMMAND SYNTAX :SEARch:SLOPe:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :SEARch:SLOPe:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of the slope

search.

Command message:

:SEARch:SLOPe:SLOPe RISing

SEAR:SLOP:SLOP RIS

Query message: SEAR:SLOP:SLOP?

Response message:

RISing

:SEARch:SLOPe:HLEVel

Command/Query

DESCRIPTION The command sets the high level of the slope search.

The query returns the current high level of the slope search.

COMMAND SYNTAX

:SEARch:SLOPe:HLEVel <high_level_value>

<high_level_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

Note:

The high level value cannot be less than the low level value using by the command :SEARch:SLOPe:LLEVel.

QUERY SYNTAX :SEARch:SLOPe:HLEVel?

RESPONSE FORMAT <high level value>

<high_level_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

EXAMPLE The following command sets the high level of the slope search

to 0.5 V.

Command message:

:SEARch:SLOPe:HLEVel 5.00E-01 SEAR:SLOP:HLEV 5.00E-01

Query message: SEAR:SLOP:HLEV?

Response message:

5.00E-01

RELATED COMMANDS :SEARch:SLOPe:LLEVel

:SEARch:SLOPe:LLEVel

Command/Query

DESCRIPTION The command sets the low level of the slope search.

The query returns the current low level of the slope search.

COMMAND SYNTAX

:SEARch:SLOPe:LLEVel <low_level_value>

<low_level_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |

| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

Note:

The low level value cannot be greater than the low level value using by the command :SEARch:SLOPe:HLEVel.

QUERY SYNTAX :SEARch:SLOPe:LLEVel?

RESPONSE FORMAT < low level value>

<low_level_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

point and experient, into 11202 2.

EXAMPLE The following command sets the low level of the slope search

to -0.5 V.

Command message:

:SEARch:SLOPe:LLEVel -5.00E-01 SEAR:SLOP:LLEV -5.00E-01

Query message: SEAR:SLOP:LLEV?

Response message:

-5.00E-01

RELATED COMMANDS :SEARch:SLOPe:HLEVel

:SEARch:SLOPe:LIMit

Command/Query

DESCRIPTION The command sets the limit range type of the slope search.

The query returns the current limit range type of the slope

search.

COMMAND SYNTAX :SEARch:SLOPe:LIMit <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

QUERY SYNTAX :SEARch:SLOPe:LIMit?

RESPONSE FORMAT <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

EXAMPLE The following command sets the limit of the slope search to

LESSthan.

Command message:

:SEARch:SLOPe:LIMit LESSthan

SEAR:SLOP:LIM LESS

Query message: SEAR:SLOP:LIM?

Response message:

LESSthan

RELATED COMMANDS :SEARch:SLOPe:TUPPer

:SEARch:SLOPe:TLOWer

:SEARch:SLOPe:TUPPer

Command/Query

DESCRIPTION

The command sets the upper value of the slope search limit

type.

The query returns the current upper value of the slope search

limit type.

COMMAND SYNTAX

:SEARch:SLOPe:TUPPer <value>

<value>:= Value in NR3 format, including a decimal point and
exponent, like 1.23E+2. The range of the value varies by
model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | [1.00E-09, 2.00E+01] |
| SDS5000X | |
| SDS2000X Plus | |
| SDS6000 Pro | |
| SDS6000A | |
| SDS6000L | [2.00E-09, 2.00E+01] |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS1000X HD | |
| SDS800X HD | |
| SHS800X/SHS1000X | [2.00E-09, 4.20E+00] |

Note:

- The upper value cannot be less than the lower value using by the command :SEARch:SLOPe:TLOWer.
- The command is not valid when the limit range type is GREATerthan.

QUERY SYNTAX

:SEARch:SLOPe:TUPPer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the upper value of the slope search to 30 ns, when the limit range type is OUTer.

Command message:

:SEARch:SLOPe:TUPPer 3.00E-08 SEAR:SLOP:TUPP 3.00E-08

Query message: SEAR:SLOP:TUPP? Response message:

3.00E-08

RELATED COMMANDS

:SEARch:SLOPe:LIMit :SEARch:SLOPe:TLOWer

:SEARch:SLOPe:TLOWer

Command/Query

DESCRIPTION

The command sets the lower value of the slope search limit

type.

The query returns the current lower value of the slope search limit type.

COMMAND SYNTAX

:SEARch:SLOPe:TLOWer <value>

<value>:= Value in NR3 format, including a decimal point and
exponent, like 1.23E+2. The range of the value varies by
model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | [1.00E-09, 2.00E+01] |
| SDS5000X | |
| SDS2000X Plus | |

| SHS800X/SHS1000X | [2.00E-09, 4.20E+00] |

Note:

- The lower value cannot be greater than the upper value using by the command :SEARch:INTerval:TUPPer.
- The command is not valid when the limit range type is LESSthan.

QUERY SYNTAX

:SEARch:INTerval:TLOWer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format

EXAMPLE

The following command sets the time lower value of the

interval search to 10 ns.

Command message:

:SEARch:INTerval:TLOWer 1.00E-08

SEAR:INT:TLOW 1.00E-08

Query message:

SEAR:INT:TLOW?

Response message:

1.00E-08

RELATED COMMANDS

:SEARch:INTerval:LIMit :SEARch:INTerval:TUPPer

:SEARch:RUNT Commands

The :SEARch:RUNT subsystem commands control the runt search parameters.

• :SEARch:RUNT:SOURce

:SEARch:RUNT:POLarity

:SEARch:RUNT:HLEVel

:SEARch:RUNT:LLEVel

• :SEARch:RUNT:LIMit

• :SEARch:RUNT:TUPPer

:SEARch:RUNT:TLOWer

:SEARch:RUNT:SOURce

Command/Query

DESCRIPTION The command sets the search source of the runt search.

The query returns the current search source of the runt search.

COMMAND SYNTAX :SEARch:RUNT:SOURce <source>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :SEARch:RUNT:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>}

EXAMPLE The following command sets the search source of the runt

search to channel 2

Command message:

:SEARch:RUNT:SOURce C2 SEAR:RUNT:SOUR C2

Query message: SEAR:RUNT:SOUR?

Response message:

C2

:SEARch:RUNT:POLarity

Command/Query

DESCRIPTION The command sets the polarity of the runt search.

The query returns the current polarity of the runt search.

COMMAND SYNTAX :SEARch:RUNT:POLarity <polarity_type>

<polarity_type>:= {POSitive|NEGative}

QUERY SYNTAX :SEARch:RUNT:POLarity?

RESPONSE FORMAT <polarity_type>

<polarity_type>:= {POSitive|NEGative}

EXAMPLE The following command sets the polarity of the runt search to

POSitive.

Command message:

:SEARch:RUNT:POLarity POSitive

SEAR:RUNT:POL POS

Query message: SEAR:RUNT:POL?

Response message:

POSitive

:SEARch:RUNT:HLEVel

Command/Query

DESCRIPTION The command sets the high search level of the runt search.

The query returns the current high search level of the runt

search.

COMMAND SYNTAX :SEARch:RUNT:HLEVel <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

exponent, like 1.23L+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

Note:

The high level value cannot be less than the low level value using by the command :SEARch:RUNT:LLEVel.

QUERY SYNTAX :SEARch:RUNT:HLEVel?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the high search level of the runt

search to 0.5 V.

Command message:

:SEARch:RUNT:HLEVel 5.00E-01 SEAR:RUNT:HLEV 5.00E-01

Query message:

SEAR:RUNT:HLEV?

Response message:

5.00E-01

RELATED COMMANDS :SEARch:RUNT:LLEVel

:SEARch:RUNT:LLEVel

Command/Query

The command sets the low search level of the runt search. **DESCRIPTION**

The query returns the current low search level of the runt

search.

COMMAND SYNTAX :SEARch:RUNT:LLEVel <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

The low level value cannot be greater than the high level value using by the command :SEARch:RUNT:HLEVel.

QUERY SYNTAX :SEARch:RUNT:LLEVel?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the low search level of the runt

search to -0.5 V.

Command message:

:SEARch:RUNT:LLEVel - 5.00E-01

SEAR:RUNT:LLEV - 5.00E-01

Query message:

SEAR:RUNT:LLEV?

Response message:

-5.00E-01

RELATED COMMANDS :SEARch:RUNT:HLEVel

:SEARch:RUNT:LIMit

Command/Query

DESCRIPTION The command sets the limit range type of the runt search.

The query returns the current limit range type of the runt

search.

COMMAND SYNTAX :SEARch:RUNT:LIMit <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

QUERY SYNTAX :SEARch:RUNT:LIMit?

RESPONSE FORMAT <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

EXAMPLE The following command sets the limit of the runt search to

LESSthan.

Command message:

:SEARch:RUNT:LIMit LESSthan

SEAR:RUNT:LIM LESS

Query message: SEAR:RUNT:LIM?

Response message:

LESSthan

RELATED COMMANDS :SEARch:RUNT:TUPPer

:SEARch:RUNT:TLOWer

:SEARch:RUNT:TUPPer

Command/Query

DESCRIPTION

The command sets the upper value of the runt search limit

type.

The query returns the current upper value of the runt search

limit type.

COMMAND SYNTAX

:SEARch:PULse:RUNT <value>

<value>:= Value in NR3 format, including a decimal point and
exponent, like 1.23E+2. The range of the value varies by
model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | [1.00E-09, 2.00E+01] |
| SDS5000X | |
| SDS2000X Plus | |
| SDS6000 Pro | |
| SDS6000A | |
| SDS6000L | [2.00E-09, 2.00E+01] |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS1000X HD | |
| SDS800X HD | |
| SHS800X/SHS1000X | [2.00E-09, 4.20E+00] |

Note:

- The upper value cannot be less than the lower value using by the command :SEARch:RUNT:TLOWer.
- The command is not valid when the limit range type is GREATerthan.

QUERY SYNTAX

:SEARch:RUNT:TUPPer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format.

EXAMPLE

The following command sets the upper time of the runt search

to 30 ns.

Command message:

:SEARch:RUNT:TUPPer 3.00E-08 SEAR:RUNT:TUPP 3.00E-08

Query message:

SEAR:RUNT:TUPP?

Response message:

3.00E-08

RELATED COMMANDS

:SEARch:RUNT:LIMit :SEARch:RUNT:TLOWer

:SEARch:RUNT:TLOWer

Command/Query

DESCRIPTION

The command sets the lower value of the runt search limit

type.

The query returns the current lower value of the runt search

limit type.

COMMAND SYNTAX

:SEARch:RUNT:TLOWer <value>

<value>:= Value in NR3 format, including a decimal point and
exponent, like 1.23E+2. The range of the value varies by
model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | [1.00E-09, 2.00E+01] |
| SDS5000X | |
| SDS2000X Plus | |
| SDS6000 Pro | |
| SDS6000A | |
| SDS6000L | [2.00E-09, 2.00E+01] |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS1000X HD | |
| SDS800X HD | |
| SHS800X/SHS1000X | [2.00E-09, 4.20E+00] |

Note:

- The lower value cannot be greater than the upper value using by the command :SEARch:RUNT:TUPPer.
- The command is not valid when the limit range type is LESSthan.

QUERY SYNTAX

:SEARch:RUNT:TLOWer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format.

EXAMPLE

The following command sets the lower time of the runt search to 10 ns.

Command message:

:SEARch:RUNT:TLOWer 1.00E-08 SEAR:RUNT:TLOW 1.00E-08

Query message: SEAR:RUNT:TLOW?

Response message:

1.00E-08

RELATED COMMANDS

:SEARch:RUNT:LIMit :SEARch:RUNT:TUPPer

SYSTem Commands

The :SYSTem subsystem commands control the basic system functions of the oscilloscope.

- :SYSTem:SHUTdown
- :SYSTem:SSAVer
- ◆ :SYSTem:TIME
- :SYSTem:TOUCh

:SYSTem:BUZZer

Command/Query

DESCRIPTION The command the status of the buzzer.

The query returns the current status of the buzzer.

COMMAND SYNTAX :SYSTem:BUZZer <state>

<state>:= {ON|OFF}

QUERY SYNTAX :SYSTem:BUZZer?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the oscilloscope buzzer.

Command message: :SYSTem:BUZZer ON SYST:BUZZ ON

Query message: SYST:BUZZ?

Response message:

ON

:SYSTem:CLOCk

Command/Query

DESCRIPTION The command sets the oscilloscope clock source and the state

of the 10 MHz clock output.

The query returns the oscilloscope current clock source and

the state of the 10 MHz clock output.

COMMAND SYNTAX :SYSTem:CLOCk <source>

<source>:= {EXT|IN_ON|IN_OFF}

• EXT selects the external clock source. The 10 MHz output will be automatically disabled.

IN ON selects the internal clock source and enables the

10 MHz output.

IN_OFF selects the internal clock source and disables the

Int.siglent.com

10M output.

QUERY SYNTAX :SYSTem:CLOCk?

RESPONSE FORMAT <source>

<source>:= {EXT|IN_ON|IN_OFF}

EXAMPLE The following command sets the oscilloscope clock source to

inner and turns on the 10 MHz output.

Command message:

:SYSTem:CLOCk IN_ON SYST:CLOC IN_ON

Query message:

SYST:CLOC?

Response message:

IN_ON

454

:SYSTem:COMMunicate:LAN:GATeway

Command/Query

DESCRIPTION The command is used to set the gateway of the internal

network of the oscilloscope.

The query returns the gateway of the network.

COMMAND SYNTAX :SYSTem:COMMunicate:LAN:GATeway <string>

<string>:=quoted string of ASCII text.

QUERY SYNTAX :SYSTem:COMMunicate:LAN:GATeway?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the gateway of the oscilloscope's

internal network to "10.12.0.1".

Command message:

:SYSTem:COMMunicate:LAN:GATeway "10.12.0.1"

SYST:COMM:LAN:GAT "10.12.0.1"

Query message:

SYST:COMM:LAN:GAT?

Response message:

"10.12.0.1"

RELATED COMMANDS :SYSTem:COMMunicate:LAN:IPADdress

:SYSTem:COMMunicate:LAN:SMASk :SYSTem:COMMunicate:LAN:TYPE

:SYSTem:COMMunicate:LAN:IPADdress

Command/Query

DESCRIPTION The command sets the IP address of the oscilloscope's

internal network interface.

The query returns the IP address of the oscilloscope's internal

network interface.

COMMAND SYNTAX :SYSTem:COMMunicate:LAN:IPADdress <string>

<string>:=quoted string of ASCII text.

QUERY SYNTAX :SYSTem:COMMunicate:LAN:IPADdress?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the IP address of the

oscilloscope's internal network interface to "10.12.255.229".

Command message:

:SYSTem:COMMunicate:LAN:IPADdress "10.12.255.229"

SYST:COMM:LAN:IPAD "10.12.255.229"

Query message:

SYST:COMM:LAN:IPAD?

Response message:

"10.12.255.229"

RELATED COMMANDS :SYSTem:COMMunicate:LAN:GATeway

:SYSTem:COMMunicate:LAN:SMASk :SYSTem:COMMunicate:LAN:TYPE

:SYSTem:COMMunicate:LAN:MAC

Query

DESCRIPTION The query returns the MAC address of the oscilloscope.

QUERY SYNTAX :SYSTem:COMMunicate:LAN:MAC?

RESPONSE FORMAT byte1>:<byte2>:<byte3>:<byte4>:<byte5>:<byte6>

EXAMPLE The following query returns the MAC address of the

oscilloscope.

Query message:

SYST:COMM:LAN:MAC?

Response message: 00:01:D2:0C:00:A0

:SYSTem:COMMunicate:LAN:SMASk

Command/Query

DESCRIPTION The command sets the subnet mask of the oscilloscope's

internal network interface.

The query returns the subnet mask of the oscilloscope's

internal network interface.

COMMAND SYNTAX :SYSTem:COMMunicate:LAN:SMASK <string>

<string>:=quoted string of ASCII text.

QUERY SYNTAX :SYSTem:COMMunicate:LAN:SMASK?

RESPONSE FORMAT <string>

EXAMPLE The following command sets the subnet mask of the

oscilloscope's internal network interface to "10.12.255.229" .

Command message:

:SYSTem:COMMunicate:LAN:SMASk "255.255.0.0"

SYST:COMM:LAN:SMAS "255.255.0.0"

Query message:

SYST:COMM:LAN:SMAS?

Response message:

"255.255.0.0"

RELATED COMMANDS :SYSTem:COMMunicate:LAN:GATeway

:SYSTem:COMMunicate:LAN:IPADdress :SYSTem:COMMunicate:LAN:TYPE

:SYSTem:COMMunicate:LAN:TYPE

Command/Query

DESCRIPTION The command sets the type of LAN configuration settings.

The query returns the current type of the LAN configuration

settings.

COMMAND SYNTAX :SYSTem:COMMunicate:LAN:TYPE <state>

<state>:= {STATIC|DHCP}

STATIC means that the Ethernet settings will be

configured manually, using

commands: SYSTem: COMMunicate: LAN: IPADdress,: SY

STem:COMMunicate:LAN:SMASK,

and :SYSTem:COMMunicate:LAN:GATeway

 DHCP means that the oscilloscope's IP address, subnet mask and gateway settings will be received from a DHCP

server on the local network.

QUERY SYNTAX :SYSTem:COMMunicate:LAN:TYPE?

RESPONSE FORMAT <state>

<state>:= {STATIC|DHCP}

EXAMPLE The following command sets the type of the LAN configuration

to DHCP.

Command message:

:SYSTem:COMMunicate:LAN:TYPE DHCP

SYST:COMM:LAN:TYPE DHCP

Query message:

SYST:COMM:LAN:TYPE?

Response message:

DHCP

RELATED COMMANDS :SYSTem:COMMunicate:LAN:GATeway

:SYSTem:COMMunicate:LAN:IPADdress :SYSTem:COMMunicate:LAN:SMASk

:SYSTem:COMMunicate:VNCPort

Command/Query

DESCRIPTION The command sets the VNC port of the oscilloscope.

The query returns the current VNC port of the oscilloscope.

COMMAND SYNTAX :SYSTem:COMMunicate:VNCPort <value>

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [5900, 5999].

QUERY SYNTAX :SYSTem:COMMunicate:VNCPort?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the VNC port to 5903.

Command message:

:SYSTem:COMMunicate:VNCPort 5903

SYST:COMM:VNCP 5903

Query message:

SYST:COMM:VNCP?

Response message:

5903

:SYSTem:DATE

Command/Query

DESCRIPTION The command sets the system date of the oscilloscope.

This query returns the oscilloscope current date.

COMMAND SYNTAX :SYSTem:DATE <date>

<date>:= 8-digit NR1 format, from high to low, is expressed as

a 4-digit year, 2-digit month, and 2-digit day.

QUERY SYNTAX :SYSTem:DATE?

RESPONSE FORMAT <date>

EXAMPLE The following command sets the oscilloscope current date to

December 20, 2019.

Command message:

:SYSTem:DATE 20191220 SYST:DATE 20190819

Query message: SYST:DATE?

Response message:

20190819

RELATED COMMANDS :SYSTem:TIME

:SYSTem:EDUMode

Command/Query

DESCRIPTION The command sets the education mode (locks of AutoSetup,

measure and cursors) of the oscilloscope.

The query returns the education mode of the oscilloscope.

COMMAND SYNTAX :SYSTem:EDUMode <func>,<lock>

<func>:= {AUTOSet|MEASure|CURSor}

<lock>:= {ON|OFF}

ON means the enable the function.

• OFF means disable the function.

QUERY SYNTAX :SYSTem:EDUMode?

:SYSTem:EDUMode? <func>

Note:

The query without parameters will return the lock status of all

functions.

RESPONSE FORMAT Format 1:

AUTOSet, < lock > ; MEASure, < lock > ; CURSor, < lock >

Format 2: <lock>

<lock>:= {ON|OFF}

EXAMPLE The following command disables the AutoSetup function.

Command message:

:SYSTem:EDUMode AUTOSet,OFF

SYST:EDUM AUTOS,OFF

Query message:

SYST:EDUM? AUTOS

Response message:

OFF

:SYSTem:LANGuage

Command/Query

DESCRIPTION The command selects the oscilloscope language display.

This query returns the oscilloscope language display.

COMMAND SYNTAX :SYSTem:LANGuage <language>

<language>:=

{SCHinese|TCHinese|ENGLish|FRENch|JAPanese|KORean|D

EUTsch|ESPan|RUSSian|ITALiana|PORTuguese}

QUERY SYNTAX :SYSTem:LANGuage?

RESPONSE FORMAT < language>

<language>:=

{SCHinese|TCHinese|ENGLish|FRENch|JAPanese|KORean|D

EUTsch|ESPan|RUSSian|ITALiana|PORTuguese}

EXAMPLE The following command sets the Oscilloscope language to

English.

Command message:

:SYSTem:LANGuage ENGLish

SYST:LANG ENGL

Query message: SYST:LANG?

Response message:

ENGLish

:SYSTem:MENU

Command/Query

DESCRIPTION The command sets the state of the menu.

The query returns the current state of the menu.

Note:

This command is only valid for models with the menu switch.

COMMAND SYNTAX :SYSTem:MENU <state>

<state>:= {ON|OFF}

QUERY SYNTAX :SYSTem:MENU?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the menu.

Command message: :SYSTem:MENU ON SYST:MENU ON

Query message: SYST:MENU?

Response message:

ON

:SYSTem:NSTorage

Command/Query

DESCRIPTION

This command attempts to mount the network drive specified

by the parameters.

This query returns the parameters of the mounted network

drive.

COMMAND SYNTAX

:SYSTem:NSTorage

<path>,<user>,<pwd>,<anon>,<auto_con>,<rem_path>,<rem_

user>,<rem_pwd>

<path>:= Quoted string of the server path to be mounted

<user>:= Quoted string of the user name.
<pwd>>:= Quoted string of the user password

<anon>:= Anonymous flag, 1 for ON while 0 for OFF

<auto con>:= Automatic connection flag, 1 for ON while 0 for

OFF

<rem_path>:= Remember path flag, 1 for ON while 0 for OFF
<rem_user>:= Remember user flag, 1 for ON while 0 for OFF
<rem pwd>:= Remember password flag, 1 for ON while 0 for

OFF

QUERY SYNTAX

:SYSTem:NSTorage?

RESPONSE FORMAT

<path>,<user>,<pwd>,<anon>,<auto_con>,<rem_path>,<rem_

user>,<rem_pwd>

Note:

For security, the password is always returned "***".

EXAMPLE

The following command sets the network drive mount information.

Command message:

:SYSTem:NSTorage "//10.12.255.239/nfs","","",0,0,1,0,0

SYST:NST "//10.12.255.239/nfs", "", "", 0, 0, 1, 0, 0

Query message:

SYST:NST?

Response message:

"//10.12.255.239/nfs","","***",0,0,1,0,0

464

:SYSTem:NSTorage:CONNect

Command

DESCRIPTION This command attempts to mount the network drive.

COMMAND SYNTAX :SYSTem:NSTorage:CONNect

EXAMPLE The following command mounts the network drive.

Command message:

:SYSTem:NSTorage:CONNect

SYST:NST:CONN

:SYSTem:NSTorage:DISConnect

Command

DESCRIPTION This command attempts to un-mount the network drive.

COMMAND SYNTAX :SYSTem:NSTorage:DISConnect

EXAMPLE The following command unmounts the network drive.

Command message:

:SYSTem:NSTorage:DISConnect

SYST:NST:DISC

:SYSTem:NSTorage:STATus

Query

DESCRIPTION The query returns the mount status of network drive.

QUERY SYNTAX :SYSTem:NSTorage:STATus?

RESPONSE FORMAT <status>

<status>:= {ON|OFF}.

EXAMPLE The following query returns the mount status of network drive.

Query message: SYST:NST:STAT?

Response message:

OFF

:SYSTem:PON

Command/Query

DESCRIPTION The command sets the state of the Power-On-Line function.

When enabled, the instrument will reboot automatically if the

power is removed and re-established.

The query returns the current state of the Power-On-Line

function.

COMMAND SYNTAX :SYSTem:PON <state>

<state>:= {ON|OFF}

QUERY SYNTAX :SYSTem:PON?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command sets the state of the Power-On-Line to

on.

Command message: :SYSTem:PON ON SYST:PON ON

Query message: SYST:PON?

Response message:

ON

:SYSTem:REBoot

Command

DESCRIPTION The command restarts the oscilloscope.

COMMAND SYNTAX :SYSTem:REBoot

EXAMPLE The following command restarts the oscilloscope.

Command message: :SYSTem:REBoot SYST:REB

RELATED COMMANDS :SYSTem:SHUTdown

:SYSTem:REMote

Command/Query

DESCRIPTION The command sets the status of the remote control. When the

remote control is turned on, the touch screen, the front panel and the touch screen, front panel and peripheral will be locked,

and there will be a remote prompt on the screen.

This query returns the current status of the remote setting.

COMMAND SYNTAX :SYSTem:REMote <state>

<state>:= {ON|OFF}

QUERY SYNTAX :SYSTem:REMote?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the remote setting.

Command message: :SYSTem:REMote ON

SYST:REM ON

Query message:

SYST:REM?

Response message:

ON

:SYSTem:SELFCal

Command/Query

DESCRIPTIONThe command instructs the oscilloscope to perform self-

calibration.

The query returns the oscilloscope self-calibration status.

COMMAND SYNTAX :SYSTem:SELFCal

QUERY SYNTAX :SYSTem:SELFCal?

RESPONSE FORMAT <state>

<state>:= {DOING|DONE}

EXAMPLE The following command asks for the oscilloscope self-cal

status.

Command message: :SYSTem:SELFCal SYST:SELFC

Query message: SYST:SELFC?

Response message:

DONE

:SYSTem:SHUTdown

Command

DESCRIPTION The command shut down the oscilloscope.

COMMAND SYNTAX :SYSTem:SHUTdown

EXAMPLE The following command shut down the oscilloscope.

Command message: :SYSTem:SHUTdown

SYST:SHUT

RELATED COMMANDS :SYSTem:REBoot

:SYSTem:SSAVer

Command/Query

DESCRIPTION The command controls the automatic screensaver, which

automatically shuts down the internal color monitor after a

preset time.

The query returns whether the automatic screensaver feature

is on.

COMMAND SYNTAX :SYSTem:SSAVer <time>

<time>:= {OFF|1MIN|5MIN|10MIN|30MIN|60MIN}

QUERY SYNTAX :SYSTem:SSAVer?

RESPONSE FORMAT <time>

<time>:= {OFF|1MIN|5MIN|10MIN|30MIN|60MIN}

EXAMPLE The following command sets the automatic screensaver to 10

minutes.

Command message: :SYSTem:SSAVer 10MIN

SYST:SSAV 10MIN

Query message:

SYST:SSAV?

Response message:

10MIN

:SYSTem:TIME

Command/Query

DESCRIPTION The command sets the oscilloscope current time using a 24-

hour format.

This query returns the oscilloscope current time.

COMMAND SYNTAX :SYSTem:TIME <time>

<time>:= 8-digit NR1 format, from high to low, is expressed as

2-digit hour, 2-digit minute, and 2-digit second.

QUERY SYNTAX :SYSTem:TIME?

RESPONSE FORMAT <time>

EXAMPLE The following command sets the current time of the

oscilloscope to 08:10:40.

Command message: :SYSTem:TIME 081040 SYST:TIME 081040

Query message: SYST:TIME?

Response message:

081040

RELATED COMMANDS :SYSTem:DATE

:SYSTem:TOUCh

Command/Query

DESCRIPTION The command sets the status of the touch screen.

The query returns the current status of the touch screen.

COMMAND SYNTAX :SYSTem:TOUCh <state>

<state>:= {ON|OFF}

QUERY SYNTAX :SYSTem:TOUCh?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command enables the touch setting.

Command message: :SYSTem:TOUCh ON SYST:TOUC ON

Query message: SYST:TOUC?

Response message:

ON

TIMebase Commands

The :TIMEBASE subsystem commands control the horizontal (X-axis) functions. The time per division, delay, and reference can be controlled for the main and window (zoomed) time bases.

◆ :TIMebase:DELay

• :TIMebase:REFerence

:TIMebase:REFerence:POSition

:TIMebase:SCALe

• :TIMebase:WINDow

:TIMebase:WINDow:DELay:TIMebase:WINDow:SCALe

:TIMebase:DELay

Command/Query

DESCRIPTION The command specifies the main timebase delay. This delay is

the time between the trigger event and the delay reference point

on the screen.

The query returns the current delay value.

COMMAND SYNTAX :TIMebase:DELay <delay_value>

<delay_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2. The range of the value is

[-5000div*timebase, 5div*timebase].

QUERY SYNTAX :TIMebase:DELay?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command specifies a 10 us delay of main time

base.

Command message:

:TIMebase:DELay 1.00E-05

TIM:DEL 1.00E-05

Query message:

TIM:DEL?

Response message:

1.00E-05

RELATED COMMANDS :TIMebase:SCALe

:TIMebase:REFerence

Command/Query

DESCRIPTION

The command sets the strategy for the delay value change in the horizontal direction when the horizontal scale is changed.

The query returns the current horizontal reference strategy.

COMMAND SYNTAX

:TIMebase:REFerence <type>

<type>:= {DELay|POSition}

- DELay means when the time base is changed, the horizontal delay value remains fixed. As the horizontal timebase scale is changed, the waveform expands/contracts around the center of the display.
- POSition means When the time base is changed, the horizontal delay remains fixed to the grid position on the display. As the horizontal time base scale is changed, the waveform expands/contracts around the position of the horizontal display.

QUERY SYNTAX

:TIMebase:REFerence?

RESPONSE FORMAT

<type>

<type>:= {DELay|POSition}

EXAMPLE

The following command sets the type of the horizontal reference to DELay.

Command message:

:TIMebase:REFerence DELay

TIM:REF DEL

Query message:

TIM:REF?

Response message:

DELay

474

:TIMebase:REFerence:POSition

Command/Query

DESCRIPTION The command sets the horizontal reference center when the

reference strategy is DELay.

The query returns the current horizontal reference center.

COMMAND SYNTAX :TIMebase:REFerence:POSition <value>

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 100].

QUERY SYNTAX :TIMebase:REFerence:POSition?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command changes the horizontal reference

center to 20%.

Command message:

:TIMebase:REFerence:POSition 20

TIM:REF:POS 20

Query message: TIM:REF:POS?

Response message:

20

RELATED COMMANDS :TIMebase:REFerence

:TIMebase:SCALe

Command/Query

DESCRIPTION The command sets the horizontal scale per division for the

main window.

The query returns the current horizontal scale setting in

seconds per division for the main window.

Note:

Due to the limitation of the expansion strategy, when the time base is set from large to small, it will automatically adjust to

the minimum time base that can be set currently.

COMMAND SYNTAX :TIMebase:SCALe <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

Note:

The range of value varies from the models. See the datasheet

for details.

QUERY SYNTAX :TIMebase:SCALe?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the horizontal scale to 100 ns/div.

Command message:

:TIMebase:SCALe 1.00E-07

TIM:SCAL 1.00E-07

Query message:

TIM:SCAL?

Response message:

1.00E-07

RELATED COMMANDS :TIMebase:DELay

:TIMebase:WINDow

Command/Query

DESCRIPTION The command turns on or off the zoomed window.

The query returns the state of the zoomed window.

COMMAND SYNTAX :TIMebase:WINDow <state>

<state>:= {ON|OFF}

QUERY SYNTAX :TIMebase:WINDow?

RESPONSE FORMAT <state>

<state>:= {ON|OFF}

EXAMPLE The following command turns on the zoomed window.

Command message: :TIMebase:WINDow ON

TIM:WIND ON

Query message: *TIM:WIND?*

Response message:

ON

RELATED COMMANDS :TIMebase:WINDow:DELay

:TIMebase:WINDow:SCALe

:TIMebase:WINDow:DELay

Command/Query

DESCRIPTION

The command sets the horizontal position in the zoomed view of the main sweep.

The query returns the current delay value between the zoomed window and the main sweep.

COMMAND SYNTAX

:TIMebase:WINDow:DELay <delay_value>

<delay_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

Note:

- The main sweep range and the main sweep horizontal position determine the range for the delay value of the zoomed window. It must keep the zoomed view window within the main sweep range.
- If you set the delay to a value outside of the legal range, the delay value is automatically set to the nearest legal value.

QUERY SYNTAX

:TIMebase:WINDow:DELay?

RESPONSE FORMAT

<delay value>

<delay_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

EXAMPLE

The following command sets 1 ms delay value to change the position of the zoomed window.

Command message:

:TIMebase:WINDow:DELay 1.00E-03

TIM:WIND:DEL 1.00E-03

Query message: TIM:WIND:DEL?

Response message:

1.00E-03

RELATED COMMANDS

:TIMebase:WINDow:SCALe

:TIMebase:SCALe :TIMebase:DELay

:TIMebase:WINDow:SCALe

Command/Query

DESCRIPTION The command sets the zoomed window horizontal scale

(seconds/division).

The query returns the current zoomed window scale setting.

COMMAND SYNTAX :TIMebase:WINDow:SCALe <scale value>

<scale_value>:= Value in NR3 format, including a decimal

point and exponent, like 1.23E+2.

Note:

The scale of the zoomed window cannot be greater than that of the main window. If you set the value greater than, it will automatically be set to the same value as the main window.

QUERY SYNTAX :TIMebase:WINDow:SCALe?

RESPONSE FORMAT <scale_value>

<scale_value>:= Value in NR3 format, including a decimal

point and exponent, like 1.23E+2.

EXAMPLE The following command sets a 1 ms/div horizontal scale for

the zoomed window.

Command message:

:TIMebase:WINDow:SCALe 1.00E-03

TIM:WIND:SCAL 1.00E-03

Query message: TIM:WIND:SCAL?

Response message:

1.00E-03

RELATED COMMANDS :TIMebase:WINDow:DELay

:TRIGger:FREQuency

Query

DESCRIPTION The query returns the value of hardware frequency counter in

hertz if available. The default precision of the returned frequeny is 3 digits, and the maximum valid precision is 7 digits. Use the command ":FORMat:DATA" to set the data

precision.

QUERY SYNTAX :TRIGger:FREQuency?

RESPONSE FORMAT <val>

<val>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command returns the value of hardware

frequency counter.

Command message:

:FORMat:DATA CUSTom,7

TRIG:FREQ?

Response message:

1.234561E+04

RELATED COMMANDS :FORMat:DATA

:TRIGger:MODE

Command/Query

DESCRIPTION

The command sets the mode of the trigger.

The query returns the current mode of trigger.

COMMAND SYNTAX

:TRIGger:MODE <mode>

<mode>:= {SINGle|NORMal|AUTO|FTRIG}

- ◆ AUTO: The oscilloscope begins to search for the trigger signal that meets the conditions. If the trigger signal is satisfied, the running state on the top left corner of the user interface shows Trig'd, and the interface shows stable waveform. Otherwise, the running state always shows Auto, and the interface shows unstable waveform.
- ♦ NORMal: The oscilloscope enters the wait trigger state and begins to search for trigger signals that meet the conditions. If the trigger signal is satisfied, the running state shows Trig'd, and the interface shows stable waveform. Otherwise, the running state shows Ready, and the interface displays the last triggered waveform (previous trigger) or does not display the waveform (no previous trigger).
- ◆ SINGle: The backlight of SINGLE key lights up, the oscilloscope enters the waiting trigger state and begins to search for the trigger signal that meets the conditions. If the trigger signal is satisfied, the running state shows Trig'd, and the interface shows stable waveform. Then, the oscilloscope stops scanning, the RUN/STOP key becomes red, and the running status shows Stop. Otherwise, the running state shows Ready, and the interface does not display the waveform.
- ◆ FTRIG: Force to acquire a frame regardless of whether the input signal meets the trigger conditions or not.

QUERY SYNTAX

:TRIGger:MODE?

RESPONSE FORMAT

<mode>

<mode>:= {SINGle|NORMal|AUTO|FTRIG}

EXAMPLE

The following command sets the oscilloscope to SINGLE trigger mode.

Command message: :TRIGger:MODE SINGle TRIG:MODE SING

Query message: TRIG:MODE?

Response message:

SINGle

:TRIGger:RUN

Command

DESCRIPTION The command sets the oscilloscope to run.

COMMAND SYNTAX :TRIGger:RUN

EXAMPLE The following command sets the oscilloscope to run.

Command message:

:TRIGger:RUN TRIG:RUN

RELATED COMMANDS :TRIGger:STOP

:TRIGger:STATus

Query

DESCRIPTION The command query returns the current state of the trigger.

QUERY SYNTAX :TRIGger:STATus?

RESPONSE FORMAT <status>

<status>:= {Arm|Ready|Auto|Trig'd|Stop|Roll}

EXAMPLE The following command queries the state of trigger mode.

Query message: TRIG:STAT?

Response message:

Stop

RELATED COMMANDS :TRIGger:MODE

:TRIGger:STOP

Command

DESCRIPTION The command sets the oscilloscope from run to stop.

COMMAND SYNTAX :TRIGger:STOP

EXAMPLE The following command stops the oscilloscope.

Command message: :TRIGger:STOP

TRIG:STOP

RELATED COMMANDS :TRIGger:RUN

:TRIGger:TYPE

Command/Query

DESCRIPTION The command sets the type of trigger.

The query returns the current type of trigger.

COMMAND SYNTAX :TRIGger:TYPE <type>

<type>:= {EDGE|PULSE|SLOPe|INTerval|PATTern|RUNT| WINDow|DROPout|VIDeo|QUALified|NEDGe|DELay|SHOLd| IIC|SPI|UART|LIN|CAN|FLEXray|CANFd|IIS|M1553|SENT|

A429}

QUERY SYNTAX :TRIGger:TYPE?

RESPONSE FORMAT <type>

<type>:= {EDGE|PULSE|SLOPe|INTerval|PATTern|RUNT|
WINDow|DROPout|VIDeo|QUALified|NEDGe|DELay|SHOLd|II
C|SPI|UART|LIN|CAN|FLEXray|CANFd|IIS|M1553|SENT||A42

9}

EXAMPLE The following command sets the type of trigger to edge trigger.

Command message: :TRIGger:TYPE EDGE TRIG:TYPE EDGE

Query message: TRIG:TYPE?

Command message:

EDGE

:TRIGger:EDGE Commands

The :TRIGGER:EDGE subsystem commands control the edge trigger parameters.

• :TRIGger:EDGE:COUPling

• :TRIGger:EDGE:HLDEVent

:TRIGger:EDGE:HLDTime

• :TRIGger:EDGE:HOLDoff

• :TRIGger:EDGE:HSTart

• :TRIGger:EDGE:IMPedance

• :TRIGger:EDGE:LEVel

• :TRIGger:EDGE:NREJect

:TRIGger:EDGE:SLOPe

• :TRIGger:EDGE:SOURce

:TRIGger:EDGE:COUPling

Command/Query

DESCRIPTION

The command sets the coupling mode of the edge trigger.

The query returns the current coupling mode of the edge trigger.

COMMAND SYNTAX

:TRIGger:EDGE:COUPling <mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

- DC coupling allows dc and ac signals into the trigger path.
- AC coupling places a high-pass filter in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- HFREJect which is a high-frequency rejection filter that adds a low-pass filter in the trigger path to remove highfrequency components from the trigger waveform. Use the high-frequency rejection filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- LFREJect which is a low frequency rejection filter adds a high-pass filter in series with the trigger waveform to remove any unwanted low-frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

QUERY SYNTAX

:TRIGger:EDGE:COUPling?

RESPONSE FORMAT

<mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

EXAMPLE

The following command sets the coupling mode of the edge trigger to DC.

Command message:

:TRIGger:EDGE:COUPling DC TRIG:EDGE:COUP DC

Query message: TRIG:EDGE:COUP?

Response message:

DC

:TRIGger:EDGE:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the edge

trigger.

The query returns the current number of holdoff events of the

edge trigger.

COMMAND SYNTAX :TRIGger:EDGE:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:EDGE:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the edge trigger to 3.

Command message:

:TRIGger:EDGE:HLDEVent 3

TRIG:EDGE:HLDEV 3

Query message:

TRIG:EDGE:HLDEV?

Response message:

3

RELATED COMMANDS :TRIGger:EDGE:HOLDoff

:TRIGger:EDGE:HLDTime

Command/Query

DESCRIPTION The command sets the holdoff time of the edge trigger.

The query returns the current holdoff time of the edge trigger.

COMMAND SYNTAX :TRIGger:EDGE:HLDTime <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | |
| SDS5000X | |
| SDS2000X Plus | |
| SDS6000 Pro | |
| SDS6000A | [8.00E-09, 3.00E+01] |
| SDS6000L | |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS1000X HD | |
| SDS800X HD | |
| SHS800X/SHS1000X | [80.00E-09, 1.5E+00] |

QUERY SYNTAX :TRIGger:EDGE:HLDTime?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the holdoff time of the edge

trigger to 15 ns.

Command message:

:TRIGger:EDGE:HLDTime 1.50E-08

TRIG:EDGE:HLDT 1.50E-08

Query message:

TRIG:EDGE:HLDT?

Response message:

1.50E-08

RELATED COMMANDS :TRIGger:DROPout:HOLDoff

:TRIGger:EDGE:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the edge trigger.

The query returns the current holdoff type of the edge trigger.

COMMAND SYNTAX :TRIGger:EDGE:HOLDoff <holdoff type>

<holdoff_type>:= {OFF|EVENts|TIME}
 OFF means to turn off the holdoff.

 EVENts means the number of trigger events that the oscilloscope counts before re-arming the trigger circuitry.

 TIME means the amount of time that the oscilloscope waits before re-arming the trigger circuitry.

QUERY SYNTAX :TRIGger:EDGE:HOLDoff?

RESPONSE FORMAT <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

EXAMPLE The following command turns off the holdoff of the edge

trigger.

Command message:

:TRIGger:EDGE:HOLDoff OFF TRIG:EDGE:HOLD OFF

Query message: TRIG:EDGE:HOLD?

Response message:

OFF

RELATED COMMANDS :TRIGger:EDGE:HLDEVent

:TRIGger:EDGE:HLDTime :TRIGger:EDGE:HSTart

:TRIGger:EDGE:HSTart

Command/Query

DESCRIPTION The command defines the initial position of the edge trigger

holdoff.

The query returns the initial position of the edge trigger holdoff.

COMMAND SYNTAX :TRIGger:EDGE:HSTart <start_holdoff>

<start holdoff>:= {LAST TRIG|ACQ START}

 LAST_TRIG means the initial position of holdoff is the time of the last trigger.

 ACQ_START means the initial position of holdoff is the first time point satisfying the trigger condition.

QUERY SYNTAX :TRIGger:EDGE:HSTart?

RESPONSE FORMAT <start_holdoff>

<start_holdoff>:= {LAST_TRIG|ACQ_START}

EXAMPLE The following command sets the start holdoff mode to last

trigger.

Command message:

:TRIGger:EDGE:HSTart LAST_TRIG TRIG:EDGE:HST LAST TRIG

Query message: TRIG:EDGE:HST?

Response message:

LAST_TRIG

RELATED COMMANDS :TRIGger:EDGE:HOLDoff

:TRIGger:EDGE:IMPedance

Command/Query

DESCRIPTION The command sets the edge trigger source impedance, which

is only valid when the source is EXT or EXT/5.

The query returns the impedance of external trigger source.

COMMAND SYNTAX :TRIGger:EDGE:IMPedance <ohm>

<ohm>:= {ONEMeg|FIFTy}

QUERY SYNTAX :TRIGger:EDGE:IMPedance?

RESPONSE FORMAT <ohm >

<ohm>:= {ONEMeg|FIFTy}

EXAMPLE The following command sets the impedance of ext trigger

source to 50 ohm.

Command message:

:TRIGger:EDGE:IMPedance FIFTy

TRIG:EDGE:IMP FIFT

Query message: TRIG:EDGE:IMP?

Response message:

FIFTy

RELATED COMMANDS :TRIGger:EDGE:SOURce

:TRIGger:EDGE:LEVel

Command/Query

DESCRIPTION The command sets the trigger level of the edge trigger.

The query returns the current trigger level value of the edge

trigger.

COMMAND SYNTAX :TRIGger:EDGE:LEVel <level_value>

<level_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|--|--|
| SDS7000A | [-4.26*vertical_scale-vertical_offset,4.26*vertical_scale-vertical_offse] |
| SDS6000 Pro
SDS6000A
SDS6000L
SHS800X/SHS1000X | [-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset] |
| SDS5000X
SDS3000X HD
SDS2000X Plus
SDS2000X HD
SDS1000X HD
SDS800X HD | [-4.1*vertical_scale-vertical_offset,
4.1*vertical_scale-vertical_offset] |

QUERY SYNTAX :TRIGger:EDGE:LEVel?

RESPONSE FORMAT <|evel_value>

<level_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

EXAMPLE The following command sets the trigger level of the edge

trigger to 0.5 V.

Command message:

:TRIGger:EDGE:LEVel 5.00E-01 TRIG:EDGE:LEV 5.00E-01

Query message:

TRIG:EDGE:LEV?

Response message:

5.00E-01

RELATED COMMANDS :TRIGger:EDGE:SOURce

:TRIGger:EDGE:NREJect

Command/Query

DESCRIPTION The command sets the state of the noise rejection.

The query returns the current state of the noise rejection.

COMMAND SYNTAX :TRIGger:EDGE:NREJect <state>

<state>:= {OFF|ON}

QUERY SYNTAX :TRIGger:EDGE:NREJect?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on noise rejection.

Command message:

:TRIGger:EDGE:NREJect ON TRIG:EDGE:NREJ ON

Query message: TRIG:EDGE:NREJ?

Response message:

ON

:TRIGger:EDGE:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the edge trigger.

The query returns the current slope setting of the edge trigger.

COMMAND SYNTAX :TRIGger:EDGE:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing|ALTernate}

QUERY SYNTAX :TRIGger:EDGE:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing|ALTernate}

EXAMPLE The following command set the rising slope as trigger edge.

Command message:

:TRIGger:EDGE:SLOPe RISing

TRIG:EDGE:SLOP RIS

Query message: TRIG:EDGE:SLOP?

Response message:

RISing

:TRIGger:EDGE:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the edge trigger.

The query returns the current trigger source of the edge

trigger.

COMMAND SYNTAX :TRIGger:EDGE:SOURce <source>

<source>:= {C<n>|D<d>|EX|EX5|LINE}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:EDGE:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>|EX|EX5|LINE}

EXAMPLE The following command sets the trigger source of the edge

trigger as C1.

Command message:

:TRIGger:EDGE:SOURce C1 TRIG:EDGE:SOUR C1

Query message: TRIG:EDGE:SOUR?

Response message:

C1

• :TRIGger:SLOPe:TUPPer

:TRIGger:SLOPe:COUPling

Command/Query

DESCRIPTION

The command sets the coupling mode of the slope trigger.

The query returns the current the coupling mode of the slope trigger.

COMMAND SYNTAX

:TRIGger:SLOPe:COUPling <mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

- DC coupling allows dc and ac signals into the trigger path.
- AC coupling places a high-pass filter in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- HFREJect which is a high-frequency rejection filter adds a low-pass filter in the trigger path to remove high frequency components from the trigger waveform. Use the highfrequency reject filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- LFREJect which is a low frequency rejection filter adds a high-pass filter in series with the trigger waveform to remove any unwanted low frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

QUERY SYNTAX

:TRIGger:SLOPe:COUPling?

RESPONSE FORMAT

<mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

EXAMPLE

The following command sets the coupling mode of the slope trigger to DC.

Command message:

:TRIGger:SLOPe:COUPling DC
TRIG:SLOP:COUP DC

Query message:

TRIG:SLOP:COUP?

Response message:

DC

:TRIGger:SLOPe:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the slope

trigger.

The query returns the current number of holdoff events of the

slope trigger.

COMMAND SYNTAX :TRIGger:SLOPe:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:SLOPe:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the slope trigger to 3.

Command message:

:TRIGger:SLOPe:HLDEVent 3

TRIG:SLOP:HLDEV 3

Query message:

TRIG:SLOP:HLDEV?

Response message:

RELATED COMMANDS :TRIGger:SLOPe:HOLDoff

:TRIGger:SLOPe:HLDTime

Command/Query

DESCRIPTION This This command sets the holdoff time of the slope trigger.

The query returns the current holdoff time of the slope trigger.

COMMAND SYNTAX :TRIGger:SLOPe:HLDTime <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|---|----------------------|
| SDS7000A
SDS5000X
SDS2000X Plus
SDS6000 Pro
SDS6000A

SDS800X HD | [8.00E-09, 3.00E+01] |

QUERY SYNTAX :TRIGger:SLOPe:HLDTime?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the holdoff time of the slope

trigger to 15 ns.

Command message:

:TRIGger:SLOPe:HLDTime 1.50E-08

TRIG:SLOP:HLDT 1.50E-08

Query message:

TRIG:SLOP:HLDT?

Response message:

1.50E-08

RELATED COMMANDS :TRIGger:SLOPe:HOLDoff

:TRIGger:SLOPe:HLEVel

Command/Query

DESCRIPTION The command sets the high level of the slope trigger.

The query returns the current high level of the slope trigger.

COMMAND SYNTAX :TRIGger:SLOPe:HLEVel <high_level_value>

<high_level_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

boint and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset,4.26*vertical_scale-vertical_offse] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

Note:

The high level value cannot be less than the low level value using by the command :TRIGger:SLOPe:LLEVel.

QUERY SYNTAX :TRIGger:SLOPe:HLEVel?

RESPONSE FORMAT <high_level_value>

<high_level_value>:= Value in NR3 format, including a decimal

point and exponent, like 1.23E+2.

EXAMPLE The following command sets the high level of the slope trigger

to 0.5 V.

Command message:

:TRIGger:SLOPe:HLEVel 5.00E-01

TRIG:SLOP:HLEV 5.00E-01

Query message: TRIG:SLOP:HLEV?

Response message: 5.00E-01

RELATED COMMANDS :TRIGger:SLOPe:LLEVel

:TRIGger:SLOPe:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the slope trigger.

The query returns the curent holdoff type of the slope trigger.

COMMAND SYNTAX :TRIGger:SLOPe:HOLDoff <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}
 OFF means to turn off the holdoff

 EVENts means the amount of events that the oscilloscope counts before re-arming the trigger circuitry

 TIME means the amount of time that the oscilloscope waits before re-arming the trigger circuitry

QUERY SYNTAX :TRIGger:SLOPe:HOLDoff?

RESPONSE FORMAT <holdoff_type>

< holdoff_type>:= {OFF|EVENts|TIME}

EXAMPLE The following command turns off the holdoff of the slope

trigger.

Command message:

:TRIGger:SLOPe:HOLDoff OFF

TRIG:SLOP:HOLD OFF

Query message: TRIG:SLOP:HOLD?

Response message:

OFF

RELATED COMMANDS :TRIGger:SLOPe:HLDTime

:TRIGger:SLOPe:HLDEVent :TRIGger:SLOPe:HSTart

:TRIGger:SLOPe:HSTart

Command/Query

DESCRIPTION The command defines the initial position of the slope trigger

holdoff.

The query returns the initial position of the slope trigger

holdoff.

COMMAND SYNTAX :TRIGger:SLOPe:HSTart <type>

<start_type>:= {LAST_TRIG|ACQ_START}

 LAST_TRIG means the initial position of holdoff is the time of the last trigger.

 ACQ_START means the initial position of holdoff is the first time point satisfying the trigger condition.

QUERY SYNTAX :TRIGger:SLOPe:HSTart?

RESPONSE FORMAT <type>

<type>:= {LAST_TRIG|ACQ_START}

EXAMPLE The following command sets the start holdoff mode to

LAST_TRIG (last trigger).

Command message:

:TRIGger:SLOPe:HSTart LAST_TRIG

TRIG:SLOP:HST LAST TRIG

Query message: TRIG:SLOP:HST?

Response message:

LAST_TRIG

RELATED COMMANDS :TRIGger:SLOPe:HOLDoff

:TRIGger:SLOPe:LIMit

Command/Query

DESCRIPTION The command sets the limit range type of the slope trigger.

The query returns the current limit range type of the slope

trigger.

COMMAND SYNTAX :TRIGger:SLOPe:LIMit <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

QUERY SYNTAX :TRIGger:SLOPe:LIMit?

RESPONSE FORMAT <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

EXAMPLE The following command sets the limit of the slope trigger to

LESSthan.

Command message:

:TRIGger:SLOPe:LIMit LESSthan

TRIG:SLOP:LIM LESS

Query message: TRIG:SLOP:LIM?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:SLOPe:TLOWer

:TRIGger:SLOPe:TUPPer

:TRIGger:SLOPe:LLEVel

Command/Query

DESCRIPTION The command sets the low level of the slope trigger.

The query returns the current low level of the slope trigger.

COMMAND SYNTAX :TRIGger:SLOPe:LLEVel <low_level_value>

for details

<low_level_value>:= Value in NR3 format, including a decimal
point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset,4.26*vertical_scale-vertical_offse] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical_scale-vertical_offset, |
| SDS2000X HD | 4.1*vertical_scale-vertical_offset] |
| SDS1000X HD | |
| SDS800X HD | |

Note:

The low level value cannot be greater than the low level value using by the command :TRIGger:SLOPe:HLEVel.

QUERY SYNTAX :TRIGger:SLOPe:LLEVel?

RESPONSE FORMAT < low_level_value>

<low_level_value>:= Value in NR3 format, including a decimal

point and exponent, like 1.23E+2.

EXAMPLE The following command sets the low level of the slope trigger

to -0.5 V.

Command message:

:TRIGger:SLOPe:LLEVel -5.00E-01

TRIG:SLOP:LLEV -5.00E-01

Query message: TRIG:SLOP:LLEV?

Response message:

-5.00E-01

RELATED COMMANDS :TRIGger:SLOPe:HLEVel

Command/Query

DESCRIPTION The command sets the state of noise rejection.

The query returns the current state of noise rejection.

COMMAND SYNTAX :TRIGger:SLOPe:NREJect <state>

<state>:= {OFF|ON}

QUERY SYNTAX :TRIGger:SLOPe:NREJect?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on the noise rejection.

Command message:

:TRIGger:SLOPe:NREJect ON

TRIG:SLOP:NREJ ON

Query message: TRIG:SLOP:NREJ?

Response message:

ON

:TRIGger:SLOPe:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the slope trigger.

The query returns the current slope of the slope trigger.

COMMAND SYNTAX :TRIGger:SLOPe:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:SLOPe:SLOPe?

RESPONSE FORMAT <slope type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of the slope

trigger.

Command message:

:TRIGger:SLOPe:SLOPe RISing

TRIG:SLOP:SLOP RIS

Query message: TRIG:SLOP:SLOP?

Response message:

RISing

:TRIGger:SLOPe:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the slope trigger.

The query returns the current trigger source of the slope

trigger.

COMMAND SYNTAX :TRIGger:SLOPe:SOURce <source>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:SLOPe:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>}

EXAMPLE The following command sets the trigger source of the slope

trigger to C2 (channel 2).

Command message:

:TRIGger:SLOPe:SOURce C2

TRIG:SLOP:SOUR C2

Query message: TRIG:SLOP:SOUR?

Response message:

C2

:TRIGger:SLOPe:TLOWer

Command/Query

DESCRIPTION

The command sets the lower value of the slope trigger limit type.

The query returns the current lower value of the slope trigger limit type.

COMMAND SYNTAX

:TRIGger:SLOPe:TLOWer <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | [1.00E-09, 2.00E+01] |
| SDS5000X | |
| SDS2000X Plus | |
| SDS6000 Pro | |
| SDS6000A | |
| SDS6000L | [2.00E-09, 2.00E+01] |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS1000X HD | |
| SDS800X HD | |
| SHS800X/SHS1000X | [2.00E-09, 4.20E+00] |

Note:

- The lower value cannot be greater than the upper value using by the command :TRIGger:SLOPe:TUPPer.
- The command is not valid when the limit range type is LESSthan.

QUERY SYNTAX

:TRIGger:SLOPe:TLOWer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the lower time of the slope trigger to 10 ns.

Command message:

:TRIGger:SLOPe:TLOWer 1.00E-08 TRIG:SLOP:TLOW 1.00E-08

Query message:

TRIG:SLOP:TLOW? Response message:

1.00E-08

RELATED COMMANDS

:TRIGger:SLOPe:LIMit :TRIGger:SLOPe:TUPPer

:TRIGger:SLOPe:TUPPer

Command/Query

DESCRIPTION

The command sets the upper value of the slope trigger limit

type.

The query returns the current upper value of the slope trigger limit type.

COMMAND SYNTAX

:TRIGger:SLOPe:TUPPer <value>

<value>:= Value in NR3 format, including a decimal point and
exponent, like 1.23E+2. The range of the value varies by
model, see the table below for details.

| Model | Value Range |
|------------------|----------------------|
| SDS7000A | [1.00E-09, 2.00E+01] |
| SDS5000X | |
| SDS2000X Plus | |
| SDS6000 Pro | |
| SDS6000A | |
| SDS6000L | [2.00E-09, 2.00E+01] |
| SDS3000X HD | |
| SDS2000X HD | |
| SDS1000X HD | |
| SDS800X HD | |
| SHS800X/SHS1000X | [2.00E-09, 4.20E+00] |

Note:

- The upper value cannot be less than the lower value using by the command :TRIGger:SLOPe:TLOWer.
- The command is not valid when the limit range type is GREATerthan.

QUERY SYNTAX

:TRIGger:SLOPe:TUPPer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE

The following command sets the upper value of the slope trigger to 30 ns, when the limit range type is OUTer.

Command message:

:TRIGger:SLOPe:TUPPer 3.00E-08 TRIG:SLOP:TUPP 3.00E-08

Query message:

TRIG:SLOP:TUPP?
Response message:

- :TRIGger:PULSe:TLOWer
- :TRIGger:PULSe:TUPPer

:TRIGger:PULSe:COUPling

Command/Query

DESCRIPTION

The command sets the coupling mode of the pulse trigger.

The query returns the coupling mode of the pulse trigger.

COMMAND SYNTAX

:TRIGger:PULSe:COUPling <mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

- DC coupling allows dc and ac signals into the trigger path.
- AC coupling places a high-pass filter in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- HFREJect which is a high-frequency rejection filter adds a low-pass filter in the trigger path to remove high frequency components from the trigger waveform. Use the highfrequency rejection filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- LFREJect which is a low frequency rejection filter adds a high-pass filter in series with the trigger waveform to remove any unwanted low frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

QUERY SYNTAX

:TRIGger:PULSe:COUPling?

RESPONSE FORMAT

<mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

EXAMPLE

The following command sets coupling mode of the pulse trigger to DC.

Command message:

:TRIGger:PULSe:COUPling DC TRIG:PULS:COUP DC

Query message: TRIG:PULS:COUP?

Response message:

DC

:TRIGger:PULSe:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the pulse

trigger.

The query returns the current number of holdoff events of the

pulse trigger.

COMMAND SYNTAX :TRIGger:PULSe:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:PULSe:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the pulse trigger to 3.

Command message:

:TRIGger:PULSe:HLDEVent 3

TRIG:PULS:HLDEV 3

Query message: TRIG:PULS:HLDEV?

Response message:

3

RELATED COMMANDS :TRIGger:PULSe:HOLDoff

:TRIGger:PULSe:HLDTime

Command/Query

DESCRIPTION This This command sets the holdoff time of the pulse trigger.

The query returns the current holdoff time of the pulse trigger.

COMMAND SYNTAX :TRIGger:PULSe:HLDTime <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

| Value Range |
|-------------------------------------|
| Value Range
[8.00E-09, 3.00E+01] |
| |
| |

QUERY SYNTAX :TRIGger:PULSe:HLDTime?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the holdoff time of the pulse

trigger to 15 ns.

Command message:

:TRIGger:PULSe:HLDTime 1.50E-08

TRIG:PULS:HLDT 1.50E-08

Query message:

TRIG:PULS:HLDT?

Response message:

1.50E-08

RELATED COMMANDS :TRIGger:PULSe:HOLDoff

:TRIGger:PULSe:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the pulse trigger.

The query returns the current holdoff type of the pulse trigger.

COMMAND SYNTAX

:TRIGger:PULSe:HOLDoff <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

OFF means to turn off the holdoff.

EVENts means the amount of events that the oscilloscope counts before re-arming the trigger circuitry.

 TIME means the amount of time that the oscilloscope waits before re-arming the trigger circuitry.

QUERY SYNTAX

:TRIGger:PULSe:HOLDoff?

RESPONSE FORMAT

<holdoff type>

< holdoff_type >:= {OFF|EVENts|TIME}

EXAMPLE

The following command turns off the holdoff of the pulse

trigger.

Command message:

:TRIGger:PULSe:HOLDoff OFF

TRIG:PULS:HOLD OFF

Query message:

TRIG:PULS:HOLD?

Response message:

OFF

RELATED COMMANDS

:TRIGger:PULSe:HLDEVent :TRIGger:PULSe:HLDTime :TRIGger:PULSe:HSTart

:TRIGger:PULSe:HSTart

Command/Query

DESCRIPTION The command defines the initial position of the pulse trigger

holdoff.

The query returns the initial position of the pulse trigger

holdoff.

COMMAND SYNTAX :TRIGger:PULSe:HSTart <start holdoff>

<start holdoff>:= {LAST TRIG|ACQ START}

LAST_TRIG means the initial position of holdoff is the

time of the last trigger.

• ACQ_START means the initial position of holdoff is the

first time point satisfying the trigger condition.

QUERY SYNTAX :TRIGger:PULSe:HSTart?

RESPONSE FORMAT <start holdoff>

<start_holdoff>:= {LAST_TRIG|ACQ_START}

EXAMPLE The following command sets the start holdoff mode of pulse

trigger to LAST_TRIG (last trigger).

Command message:

:TRIGger:PULSe:HSTart LAST_TRIG

TRIG:PULS:HST LAST_TRIG

Query message:

TRIG:PULS:HST?

Response message:

<frate>:= {25Hz|30Hz|50Hz|60Hz}

QUERY SYNTAX :TRIGger:VIDeo:FRATe?

RESPONSE FORMAT <frate>

<frate>:= {25Hz|30Hz|50Hz|60Hz}

EXAMPLE The following command sets the frame rate of the custom

video trigger to 50Hz.

Command message:

:TRIGger:VIDeo:FRATe 50Hz

TRIG:VID:FRAT 50Hz

Query message: TRIG:VID:FRAT?

Response message:

50Hz

RELATED COMMANDS :TRIGger:VIDeo:STANdard

:TRIGger:VIDeo:INTerlace

Command/Query

DESCRIPTION The command sets the interlace of the custom video trigger.

The query returns the current interlace of the custom video

trigger.

COMMAND SYNTAX :TRIGger:VIDeo:INTerlace <interlace>

<interlace>:= {1|2|4|8}

QUERY SYNTAX :TRIGger:VIDeo:INTerlace?

RESPONSE FORMAT <interlace>

<interlace>:= {1|2|4|8}

EXAMPLE The following command sets the interlace of the custom video

trigger to 8:1.

Command message:

:TRIGger:VIDeo:INTerlace 8

TRIG:VID:INT 8

Query message: TRIG:VID:INT?

Response message:

8

RELATED COMMANDS :TRIGger:VIDeo:STANdard

:TRIGger:VIDeo:LCNT Command/Query

DESCRIPTION

The command sets the lines of the custom video trigger.

The query returns the current of lines of the custom video trigger.

If the "Of Lines" is set to 800, the correct relationship between the interface, of fields, trigger line and trigger field is as follows:

| Of
Lines | Interlace | Of
Fields | Trigger
Line | Trigger Field |
|-------------|-----------|--------------|-----------------|---------------|
| 800 | 1:1 | 1 | 800 | 1 |
| 800 | 2:1 | 1/2/4/8 | 400 | 1/1~2/1~4/1~8 |
| 800 | 4:1 | 1/2/4/8 | 300 | 1/1~2/1~4/1~8 |
| 800 | 8:1 | 1/2/4/8 | 100 | 1/1~2/1~4/1~8 |

COMMAND SYNTAX

:TRIGger:VIDeo:LCNT <line cnt>

cnt>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [300, 2000].

QUERY SYNTAX

:TRIGger:VIDeo:LCNT?

RESPONSE FORMAT

cnt>

cnt>:= Value in NR1 format, including an integer and no decimal point, like 1.

EXAMPLE

The following command sets the lines of the custom video trigger to 500.

Command message:

:TRIGger:VIDeo:LCNT 500 TRIG:VID:LCNT 500

Query message: TRIG:VID:LCNT?

Response message:

500

RELATED COMMANDS

:TRIGger:VIDeo:STANdard

:TRIGger:VIDeo:LEVel

Command/Query

DESCRIPTION

The command sets the trigger level of the video trigger.

The query returns the current trigger level of the video trigger.

COMMAND SYNTAX :TRIGger:VIDeo:LEVel <level_value>

<level_value>:= Value in NR3 format.

The range of the value varies by model, see the table below for details.

| Model | Value Range |
|------------------|---|
| SDS7000A | [-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset] |
| SDS6000 Pro | |
| SDS6000A | [-4.5*vertical_scale-vertical_offset, |
| SDS6000L | 4.5*vertical_scale-vertical_offset] |
| SHS800X/SHS1000X | |
| SDS5000X | |
| SDS3000X HD | |
| SDS2000X Plus | [-4.1*vertical scale-vertical offset, |
| SDS2000X HD | 4.1*vertical scale-vertical offset] |
| SDS1000X HD | |
| SDS800X HD | |

QUERY SYNTAX :TRIGger:VIDeo:LEVel?

RESPONSE FORMAT < level_value>

<level_value>:= Value in NR3 format

EXAMPLE The following command sets the trigger level of the video

trigger to 0.5 V.

Command message:

:TRIGger:VIDeo:LEVel 5.00E-01

TRIG:VID:LEV 5.00E-01

Query message:

TRIG:VID:LEV?

Response message:

5.00E-01

:TRIGger:VIDeo:LINE

Command/Query

DESCRIPTION The command sets the synchronous trigger line when the

video standard is not custom.

The query returns the current synchronous trigger line when

the video standard is not custom.

COMMAND SYNTAX :TRIGger:VIDeo:LINE <line>

Value in NR1 format, including an integer and no

decimal point, like 1.

The following table shows the corresponding relations between line and field for all video standards(except for

custom)

| Standard | Field 1 | Field 2 |
|----------------------------|-----------|----------|
| NTSC | [1, 263] | [1, 262] |
| PAL | [1, 313] | [1, 312] |
| HDTV 720P/50,
720P/60 | [1, 750] | |
| HDTV 1080P/50,
1080P/60 | [1, 1125] | |
| HDTV 1080i/50,
1080i/60 | [1, 563] | [1, 562] |

QUERY SYNTAX :TRIGger:VIDeo:LINE?

RESPONSE FORMAT line>

< an integer and no</pre>

decimal point, like 1.

EXAMPLE The following command sets the synchronous trigger line to 2.

Command message:

:TRIGger:VIDeo:LINE 2

TRIG:VID:LINE 2

Query message:

TRIG:VID:LINE?

Response message:

2

RELATED COMMANDS :TRIGger:VIDeo:STANdard

:TRIGger:VIDeo:SYNC

:TRIGger:VIDeo:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the video trigger.

The query returns the current trigger source of the video

trigger.

COMMAND SYNTAX :TRIGger:VIDeo:SOURce <source>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:VIDeo:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>}

EXAMPLE The following command sets the trigger source of the video

trigger to channel 2.

Command message:

:TRIGger:VIDeo:SOURce C2

TRIG:VID:SOUR C2

Query message: TRIG:VID:SOUR?

Response message:

C2

:TRIGger:VIDeo:STANdard

Command/Query

DESCRIPTION The command sets the standard of the video trigger.

The query returns the current standard of the video trigger.

COMMAND SYNTAX :TRIGger:VIDeo:STANdard <standard>

<standard>:=

{NTSC|PAL|P720L50|P720L60|P1080L50|P1080L60|I1080L50

|I1080L60|CUSTom}

QUERY SYNTAX :TRIGger:VIDeo:STANdard?

RESPONSE FORMAT <standard>

<standard>:=

{NTSC|PAL|P720L50|P720L60|P1080L50|P1080L60|I1080L50

|11080L60|CUSTom}

EXAMPLE The following command sets the standard of the video trigger

to NTSC.

Command message:

:TRIGger:VIDeo:STANdard NTSC

TRIG: VID: STAN NTSC

Query message: TRIG:VID:STAN?

Response message:

NTSC

:TRIGger:VIDeo:SYNC

Command/Query

DESCRIPTION The command sets the sync mode of the video trigger.

The query returns the current sync mode of the video trigger.

COMMAND SYNTAX :TRIGger:VIDeo:SYNC <sync>

<sync>:= {SELect|ANY}

QUERY SYNTAX :TRIGger:VIDeo:SYNC?

RESPONSE FORMAT <sync>

<sync>:= {SELect|ANY}

EXAMPLE The following command sets the sync mode of the video trigger

to select.

Command message:

:TRIGger:VIDeo:SYNC SELect

TRIG:VID:SYNC SEL

Query message: TRIG:VID:SYNC?

Response message:

SELect

RELATED COMMANDS :TRIGger:VIDeo:STANdard

RELATED COMMANDS :TRIGger:WINDow:DLEVel

:TRIGger:WINDow:COUPling

Command/Query

DESCRIPTION

The command sets the coupling mode of the window trigger.

The query returns the current coupling mode of the window trigger

COMMAND SYNTAX

:TRIGger:WINDow:COUPling <mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

- DC coupling allows dc and ac signals into the trigger path.
- AC coupling places a high-pass filter in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- HFREJect which is a high-frequency rejection filter adds a low-pass filter in the trigger path to remove high-frequency components from the trigger waveform. Use the high frequency rejection filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- LFREJect which is a low frequency rejection filter adds a high-pass filter in series with the trigger waveform to remove any unwanted low frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

QUERY SYNTAX

:TRIGger:WINDow:COUPling?

RESPONSE FORMAT

<mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

EXAMPLE

The following command sets the coupling mode of the window trigger to DC.

Command message:

:TRIGger:WINDow:COUPling DC TRIG:WIND:COUP DC

Query message: TRIG:WIND:COUP?

Response message:

DC

:TRIGger:WINDow:DLEVel

Command/Query

DESCRIPTION The command sets the delta level of window trigger.

The query returns the current delta level of window trigger.

COMMAND SYNTAX :TRIGger:WINDow:DLEVel <value>

<value>:= Value in NR3 format.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD

RELATED COMMANDS :TRIGger:WINDow:LLEVel

:TRIGger:WINDow:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the window trigger.

The query returns the current holdoff type of the window

trigger.

COMMAND SYNTAX :TRIGger:WINDow:HOLDoff <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

OFF means to turn off the holdoff.

 EVENts means the amount of events that the oscilloscope counts before re-arming the trigger circuitry.

◆ TIME means the amount of time that the oscilloscope waits before re-arming the trigger circuitry.

QUERY SYNTAX :TRIGger:WINDow:HOLDoff?

RESPONSE FORMAT <holdoff_type>

< holdoff_type >:= {OFF|EVENts|TIME}

EXAMPLE The following command turns off the holdoff of the window

trigger.

Command message:

:TRIGger:WINDow:HOLDoff OFF

TRIG:WIND:HOLD OFF

Query message: TRIG:WIND:HOLD?

Response message:

OFF

RELATED COMMANDS :TRIGger:WINDow:HLDEVent

Command/Query

DESCRIPTION The command sets the trigger level of the interval trigger.

The query returns the current trigger level of the interval

trigger.

COMMAND SYNTAX :TRIGger:INTerval:LEVel <level_value>

<level value>:= Value in NR3 format.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:INTerval:LEVel?

RESPONSE FORMAT < level value>

<level_value>:= Value in NR3 format

The following command sets the trigger level of the interval

trigger to 0.5 V.

Command message:

:TRIGger:INTerval:LEVel 5.00E-01

TRIGr:INT:LEV 5.00E-01

Query message:

TRIG:INT:LEV?

Response message:

5.00E-01

:TRIGger:INTerval:LIMit

Command/Query

DESCRIPTION The command sets the limit range type of the interval trigger.

The query returns the current limit range type of the interval

trigger.

COMMAND SYNTAX :TRIGger:INTerval:LIMit <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

QUERY SYNTAX :TRIGger:INTerval:LIMit?

RESPONSE FORMAT <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

EXAMPLE The following command sets the limit of the interval trigger to

LESSthan.

Command message:

:TRIGger:INTerval:LIMit LESSthan

TRIG:INT:LIM LESS

Query message: TRIG:INT:LIM?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:INTerval:TLOWer

:TRIGger:INTerval:TUPPer

:TRIGger:INTerval:NREJect

Command/Query

DESCRIPTION The command sets the state of the noise rejection.

The query returns the current state of the noise rejection

function.

COMMAND SYNTAX :TRIGger:INTerval:NREJect <state>

<state>:= {OFF|ON}

QUERY SYNTAX :TRIGger:INTerval:NREJect?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on the noise rejection.

Command message:

:TRIGger:INTerval:NREJect ON

TRIG:INT:NREJ ON

Query message: TRIG:INT:NREJ?

Response message:

ON

:TRIGger:INTerval:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the interval trigger.

The query returns the current slope of the interval trigger.

COMMAND SYNTAX :TRIGger:INTerval:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:INTerval:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of the interval

trigger.

Command message:

:TRIGger:INTerval:SLOPe RISing

TRIG:INT:SLOP RIS

Query message: TRIG:INT:SLOP?

Response message:

RISing

:TRIGger:INTerval:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the interval trigger.

The query returns the current trigger source of the interval

trigger.

COMMAND SYNTAX :TRIGger:INTerval:SOURce <source>

<source>:= $\{C<n>|D<d>\}$

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:INTerval:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the trigger source of the interval

trigger as channel 1.

Command message:

:TRIGger:INTerval:SOURce C1

TRIG:INT:SOUR C1

Query message:

TRIG:INT:SOUR?

Response message:

C1

:TRIGger:INTerval:TLOWer

Command/Query

DESCRIPTION

The command sets the lower value of the interval trigger limit

type.

The query returns the current lower value of the interval trigger

limit type.

COMMAND SYNTAX

:TRIGger:INTerval:TLOWer <value>

<value>:= Value in NR3 format. The range of the value varies
by model, see the table below for details.

Model	Value Range
SDS7000A	[1.00E-09, 2.00E+01]
SDS5000X SDS2000X Plus SDS6000 Pro SDS6000A SDS6000L SDS3000X HD SDS2000X HD SDS1000X HD	[2.00E-09, 2.00E+01]
SDS800X HD	
SHS800X/SHS1000X	[2.00E-09, 4.20E+00]

Note:

- The lower value cannot be greater than the upper value using by the command :TRIGger:INTerval:TUPPer.
- The command is not valid when the limit range type is LESSthan.

QUERY SYNTAX

:TRIGger:INTerval:TLOWer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format

EXAMPLE

The following command sets the time lower value of the interval trigger to 10 ns.

Command message:

:TRIGger:INTerval:TLOWer 1.00E-08

TRIG:INT:TLOW 1.00E-08

Query message: TRIG:INT:TLOW?

Response message:

1.00E-08

RELATED COMMANDS

:TRIGger:INTerval:LIMit :TRIGger:INTerval:TUPPer

:TRIGger:INTerval:TUPPer

Command/Query

DESCRIPTION

The command sets the upper value of the interval trigger limit

type.

The query returns the current upper value of the interval

trigger limit type.

COMMAND SYNTAX

:TRIGger:INTerval:TUPPer <value>

<value>:= Value in NR3 format. The range of the value varies

by model, see the table below for details.

Model	Value Range
SDS7000A	[1.00E-09, 2.00E+01]
SDS5000X SDS2000X Plus SDS6000 Pro SDS6000A SDS6000L SDS3000X HD SDS2000X HD SDS1000X HD	[2.00E-09, 2.00E+01]
SDS800X HD	
SHS800X/SHS1000X	[2.00E-09, 4.20E+00]

Note:

- The upper value cannot be less than the lower value using by the command :TRIGger:INTerval:TLOWer.
- The command is not valid when the limit range type is GREATerthan.

QUERY SYNTAX

:TRIGger:INTerval:TUPPer?

RESPONSE FORMAT

<tupper value>

<tupper value>:= Value in NR3 format.

EXAMPLE

The following command sets the time upper value of the

interval trigger to 30 ns.

Command message:

:TRIGger:INTerval:TUPPer 3.00E-08

TRIG:INT:TUPP 3.00E-08

Query message: TRIG:INT:TUPP?

Response message:

3.00E-08

RELATED COMMANDS

:TRIGger:INTerval:LIMit :TRIGger:INTerval:TLOWer

:TRIGger:DROPout Commands

The :TRIGGER:DROPout subsystem commands control the dropout trigger parameters.

- :TRIGger:DROPout:COUPling

- :TRIGger:DROPout:SOURce
- :TRIGger:DROPout:TIME
- :TRIGger:DROPout:TYPE

:TRIGger:DROPout:COUPling

Command/Query

DESCRIPTION

The command sets the coupling mode of the dropout trigger.

The query returns the current coupling mode of the dropout trigger.

COMMAND SYNTAX

:TRIGger:DROPout:COUPling <mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

- DC coupling allows dc and ac signals into the trigger path.
- AC coupling places a high-pass filter in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- HFREJect which is a high-frequency rejection filter adds a low-pass filter in the trigger path to remove high-frequency components from the trigger waveform. Use the highfrequency rejection filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- LFREJect which is a low frequency rejection filter adds a high-pass filter in series with the trigger waveform to remove any unwanted low frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

QUERY SYNTAX

:TRIGger:DROPout:COUPling?

RESPONSE FORMAT

<mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

EXAMPLE

The following command sets coupling mode of the dropout trigger to DC.

Command message:

:TRIGger:DROPout:COUPling DC TRIG:DROP:COUP DC

Query message:

TRIG:DROP:COUP?

Response message:

DC

:TRIGger:DROPout:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the

dropout trigger.

The query returns the current number of holdoff events of the

dropout trigger.

COMMAND SYNTAX :TRIGger:DROPout:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:DROPout:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the dropout trigger to 3.

Command message:

:TRIGger:DROPout:HLDEVent 3

TRIG:DROP:HLDEV 3

Query message:

TRIG:DROP:HLDEV?

Response message:

3

RELATED COMMANDS :TRIGger:DROPout:HOLDoff

:TRIGger:DROPout:HLDTime

Command/Query

DESCRIPTION This This command sets the holdoff time of the dropout trigger.

The query returns the current holdoff time of the dropout

trigger.

COMMAND SYNTAX :TRIGger:DROPout:HLDTime <value>

<value>:= Value in NR3 format.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	
SDS5000X SDS2000X Plus	
SDS6000 Pro	
SDS6000A	[8.00E-09, 3.00E+01]
SDS6000L	[0.002 00, 0.002 01]
SDS3000X HD	
SDS2000X HD SDS1000X HD	
SDS1000X HD	

QUERY SYNTAX :TRIGger:DROPout:HLDTime?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the holdoff time of the dropout

trigger to 15 ns.

Command message:

:TRIGger:DROPout:HLDTime 1.50E-08

:TRIG:DROP:HLDT 1.50E-08

Query message:

TRIG:DROP:HLDT?

Response message:

1.50E-08

RELATED COMMANDS :TRIGger:DROPout:HOLDoff

:TRIGger:DROPout:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the dropout trigger.

The query returns the current holdoff type of the dropout

trigger.

COMMAND SYNTAX :TRIGger:DROPout:HOLDoff <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

 OFF means to turn off the holdoff.

EVENts means the amount of events that the oscilloscope

counts before re-arming the trigger circuitry.

• TIME means the amount of time that the oscilloscope

waits before re-arming the trigger circuitry.

QUERY SYNTAX :TRIGger:DROPout:HOLDoff?

RESPONSE FORMAT <holdoff_type>

< holdoff_type>:= {OFF|EVENts|TIME}

EXAMPLE The following command turns off the holdoff of the dropout

trigger.

Command message:

:TRIGger:DROPout:HOLDoff OFF

TRIG:DROP:HOLD OFF

Query message: TRIG:DROP:HOLD?

Response message:

OFF

RELATED COMMANDS :TRIGger:DROPout:HLDEVent

:TRIGger:DROPout:HLDTime :TRIGger:DROPout:HSTart

:TRIGger:DROPout:HSTart

Command/Query

DESCRIPTION The command sets the start holdoff mode of the dropout

trigger.

The query returns the current start holdoff mode of the dropout

trigger.

COMMAND SYNTAX :TRIGger:DROPout:HSTart <start holdoff>

<start holdoff>:= {LAST TRIG|ACQ START}

LAST_TRIG means the initial position of holdoff is the

time of the last trigger.

ACQ_START means the initial position of holdoff is the

first time point satisfying the trigger condition.

QUERY SYNTAX :TRIGger:DROPout:HSTart?

RESPONSE FORMAT <start_holdoff>

<start holdoff>:= {LAST TRIG|ACQ START}

EXAMPLE The following command sets the start hold off mode to

LAST_TRIG (last trigger).

Command message:

:TRIGger:DROPout:HSTart LAST_TRIG

TRIG:DROP:HST LAST_TRIG

Query message: TRIG:DROP:HST?

Response message:

LAST_TRIG

RELATED COMMANDS :TRIGger:DROPout:HOLDoff

:TRIGger:DROPout:LEVel

Command/Query

DESCRIPTION The command sets the trigger level of the dropout trigger.

The query returns the current trigger level of the dropout

trigger.

COMMAND SYNTAX :TRIGger:DROPout:LEVel <level_value>

<level value>:= Value in NR3 format.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,

SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:DROPout:LEVel?

RESPONSE FORMAT < level value>

<level_value>:= Value in NR3 format.

The following command sets the trigger level of the dropout trigger to 0.5 V.

Command message:

:TRIGger:DROPout:LEVel 5.00E-1

TRIG:DROP:LEV 5.00E-1

Query message: TRIG:DROP:LEV?

Response message:

5.00E-01

:TRIGger:DROPout:NREJect

Command/Query

DESCRIPTION The command sets the state of the noise rejection.

The query returns the current state of the noise rejection

function.

COMMAND SYNTAX :TRIGger:DROPout:NREJect <state>

<state>:= {OFF|ON}

QUERY SYNTAX :TRIGger:DROPout:NREJect?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on the noise rejection.

Command message:

:TRIGger:DROPout:NREJect ON

TRIG:DROP:NREJ ON

Query message: TRIG:DROP:NREJ?

Response message:

ON

:TRIGger:DROPout:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the dropout trigger.

The query returns the current slope of the dropout trigger.

COMMAND SYNTAX :TRIGger:DROPout:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:DROPout:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of the dropout

trigger.

Command message:

:TRIGger:DROPout:SLOPe RISing

TRIG:DROP:SLOP RIS

Query message: TRIG:DROP:SLOP?

Response message:

RISing

:TRIGger:DROPout:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the dropout trigger.

The query returns the current trigger source of the dropout

trigger.

COMMAND SYNTAX :TRIGger:DROPout:SOURce <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:DROPout:SOURce?

RESPONSE FORMAT <source>

<source>:= $\{C<n>|D<d>\}$

EXAMPLE The following command sets the trigger source of the dropout

trigger to channel 2.

Command message:

:TRIGger:DROPout:SOURce C2

TRIG:DROP:SOUR C2

Query message:

TRIG:DROP:SOUR?

Response message:

C2

:TRIGger:DROPout:TIME

Command/Query

DESCRIPTION The command sets the dropout time of the dropout trigger.

The query returns the current time of the dropout trigger.

COMMAND SYNTAX :TRIGger:DROPout:TIME <time>

<time>:= Value in NR3 format. The range of the value varies
by model, see the table below for details.

Model	Value Range
SDS7000A	[1.00E-09, 2.00E+01]
SDS5000X	
SDS2000X Plus	
SDS6000 Pro	
SDS6000A	
SDS6000L	[2.00E-09, 2.00E+01]
SDS3000X HD	
SDS2000X HD	
SDS1000X HD	
SDS800X HD	
SHS800X/SHS1000X	[2.00E-09, 4.20E+00]

QUERY SYNTAX :TRIGger:DROPout:TIME?

RESPONSE FORMAT <time>

<time>:= Value in NR3 format

EXAMPLE The following command sets the time of the dropout trigger to

10 ns.

Command message:

:TRIGger:DROPout:TIME 1.00E-08 TRIG:DROP:TIME 1.00E-08

Query message: TRIG:DROP:TIME?

Response message:

1.00E-08

:TRIGger:DROPout:TYPE

Command/Query

DESCRIPTION The command sets the over time type of the dropout trigger.

The query returns the current over time type of the dropout

trigger.

COMMAND SYNTAX :TRIGger:DROPout:TYPE <type>

<type>:= {EDGE|STATe}

QUERY SYNTAX :TRIGger:DROPout:TYPE?

RESPONSE FORMAT <type>

<type>:= {EDGE|STATe}

EXAMPLE The following command sets the over time type of the dropout

trigger to EDGE.

Command message:

:TRIGger:DROPout:TYPE EDGE

TRIG:DROP:TYPE EDGE

Query message: TRIG:DROP:TYPE?

Response message:

EDGE

:TRIGger:RUNT Commands

The :TRIGGER:RUNT subsystem commands control the runt trigger parameters.

- :TRIGger:RUNT:COUPling
- :TRIGger:RUNT:HLDEVent
- :TRIGger:RUNT:HLDTime
- :TRIGger:RUNT:HLEVel
- :TRIGger:RUNT:HOLDoff
- :TRIGger:RUNT:HSTart
- :TRIGger:RUNT:LIMit
- :TRIGger:RUNT:LLEVel
- :TRIGger:RUNT:NREJect
- :TRIGger:RUNT:POLarity
- :TRIGger:RUNT:SOURce
- :TRIGger:RUNT:TLOWer
- :TRIGger:RUNT:TUPPer

:TRIGger:RUNT:COUPling

Command/Query

DESCRIPTION

The command sets the coupling mode of the runt trigger.

The query returns the current coupling mode of the runt trigger.

COMMAND SYNTAX

:TRIGger:RUNT:COUPling <mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

- DC coupling allows dc and ac signals into the trigger path.
- AC coupling places a high-pass filter in the trigger path, removing dc offset voltage from the trigger waveform. Use AC coupling to get a stable edge trigger when your waveform has a large dc offset.
- HFREJect which is a high-frequency rejection filter adds a low-pass filter in the trigger path to remove high frequency components from the trigger waveform. Use the highfrequency reject filter to remove high-frequency noise, such as AM or FM broadcast stations, from the trigger path.
- LFREJect which is a low frequency rejection filter adds a high-pass filter in series with the trigger waveform to remove any unwanted low frequency components from a trigger waveform, such as power line frequencies, that can interfere with proper triggering.

QUERY SYNTAX

:TRIGger:RUNT:COUPling?

RESPONSE FORMAT

<mode>

<mode>:= {DC|AC|LFREJect|HFREJect}

EXAMPLE

The following command sets coupling mode of the runt trigger to DC.

Command message:

:TRIGger:RUNT:COUPling DC TRIG:RUNT:COUP DC

Query message: TRIG:RUNT:COUP?

Response message:

DC

:TRIGger:RUNT:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the runt

trigger.

The query returns the current number of holdoff events of the

runt trigger.

COMMAND SYNTAX :TRIGger:RUNT:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:RUNT:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the runt trigger to 3.

Command message:

:TRIGger:RUNT:HLDEVent 3

TRIG:RUNT:HLDEV 3

Query message:

TRIG:RUNT:HLDEV?

Response message:

3

RELATED COMMANDS :TRIGger:RUNT:HOLDoff

SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

Note:

The low level value cannot be greater than the high level value using by the command :TRIGger:RUNT:HLEVel.

QUERY SYNTAX :TRIGger:RUNT:LLEVel?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the low trigger level of the runt

trigger to -0.5 V.

Command message:

:TRIGger:RUNT:LLEVel - 5.00E-01 TRIG:RUNT:LLEV - 5.00E-01

Query message: TRIG:RUNT:LLEV?

Response message:

-5.00E-01

RELATED COMMANDS :TRIGger:RUNT:HLEVel

:TRIGger:RUNT:NREJect

Command/Query

DESCRIPTION The command sets the state of noise rejection.

The query returns the current state of noise rejection function.

COMMAND SYNTAX :TRIGger:RUNT:NREJect <state>

<state>:= {OFF|ON}

QUERY SYNTAX :TRIGger:RUNT:NREJect?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on the noise rejection.

Command message:

:TRIGger:RUNT:NREJect ON TRIG:RUNT:NREJ ON

Query message: TRIG:RUNT:NREJ?

Response message:

ON

:TRIGger:RUNT:POLarity

Command/Query

DESCRIPTION The command sets the polarity of the runt trigger.

The query returns the current polarity of the runt trigger.

COMMAND SYNTAX :TRIGger:RUNT:POLarity <polarity_type>

<polarity_type>:= {POSitive|NEGative}

QUERY SYNTAX :TRIGger:RUNT:POLarity?

RESPONSE FORMAT <polarity_type>

<polarity_type>:= {POSitive|NEGative}

EXAMPLE The following command sets the polarity of the runt trigger to

POSitive.

Command message:

:TRIGger:RUNT:POLarity POSitive

TRIG:RUNT:POL POS

Query message: TRIG:RUNT:POL?

Response message:

POSitive

:TRIGger:RUNT:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the runt trigger.

The query returns the current trigger source of the runt trigger.

COMMAND SYNTAX :TRIGger:RUNT:SOURce <source>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:RUNT:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>}

EXAMPLE The following command sets the trigger source of the runt

trigger to channel 2

Command message:

:TRIGger:RUNT:SOURce C2

TRIG:RUNT:SOUR C2

Query message:

TRIG:RUNT:SOUR?

Response message:

C2

:TRIGger:RUNT:TLOWer

Command/Query

DESCRIPTION

The command sets the lower value of the runt trigger limit

type.

The query returns the current lower value of the runt trigger

limit type.

COMMAND SYNTAX

:TRIGger:RUNT:TLOWer <value>

<value>:= Value in NR3 format, including a decimal point and
exponent, like 1.23E+2. The range of the value varies by
model, see the table below for details.

Model	Value Range
SDS7000A	[1.00E-09, 2.00E+01]
SDS7000A	
SDS5000X	
SDS2000X Plus	
SDS6000 Pro	
SDS6000A	[2.00E-09, 2.00E+01]
SDS6000L	[2.00E-09, 2.00E+01]
SDS3000X HD	
SDS2000X HD	
SDS1000X HD	
SDS800X HD	
SHS800X/SHS1000X	[2.00E-09, 4.20E+00]

Note:

- The lower value cannot be greater than the upper value using by the command :TRIGger:RUNT:TUPPer.
- The command is not valid when the limit range type is LESSthan.

QUERY SYNTAX

:TRIGger:RUNT:TLOWer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format.

EXAMPLE

The following command sets the lower time of the runt trigger

to 10 ns.

Command message:

:TRIGger:RUNT:TLOWer 1.00E-08 TRIG:RUNT:TLOW 1.00E-08

Query message: TRIG:RUNT:TLOW? Response message:

1.00E-08

RELATED COMMANDS

:TRIGger:RUNT:TUPPer :TRIGger:RUNT:LIMit

:TRIGger:RUNT:TUPPer

Command/Query

DESCRIPTION

The command sets the upper value of the runt trigger limit

type.

The query returns the current upper value of the runt trigger

limit type.

COMMAND SYNTAX

:TRIGger:PULse:RUNT <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[1.00E-09, 2.00E+01]
SDS5000X	
SDS2000X Plus	
SDS6000 Pro	
SDS6000A	
SDS6000L	[2.00E-09, 2.00E+01]
SDS3000X HD	
SDS2000X HD	
SDS1000X HD	
SDS800X HD	
SHS800X/SHS1000X	[2.00E-09, 4.20E+00]

Note:

- The upper value cannot be less than the lower value using by the command :TRIGger:RUNT:TLOWer.
- The command is not valid when the limit range type is GREATerthan.

QUERY SYNTAX

:TRIGger:RUNT:TUPPer?

RESPONSE FORMAT

<value>

<value>:= Value in NR3 format.

EXAMPLE

The following command sets the upper time of the runt trigger to 30 ns.

Command message:

:TRIGger:RUNT:TUPPer 3.00E-08 TRIG:RUNT:TUPP 3.00E-08

Query message: TRIG:RUNT:TUPP?

Response message:

3.00E-08

RELATED COMMANDS

:TRIGger:PATTern:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the pattern

trigger.

The query returns the current number of holdoff events of the

pattern trigger.

COMMAND SYNTAX :TRIGger:PATTern:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:PATTern:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the pattern trigger to 3.

Command message:

:TRIGger:PATTern:HLDEVent 3

TRIG:PATT:HLDEV 3

Query message: TRIG:PATT:HLDEV?

Response message:

3

RELATED COMMANDS :TRIGger:PATTern:HOLDoff

:TRIGger:PATTern:HLDTime

Command/Query

DESCRIPTION This This command sets the holdoff time of the pattern trigger.

The query returns the current holdoff time of the pattern

trigger.

COMMAND SYNTAX :TRIGger:PATTern:HLDTime <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Mode	value
SDS7000A	
SDS5000X	
SDS2000X Plus	
SDS6000 Pro	
SDS6000A	[8.00E-09, 3.00E+01]

SHS800X/SHS1000X	[80.00E-09, 1.50E+00]

QUERY SYNTAX :TRIGger:PATTern:HLDTime?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the holdoff time of the pattern

trigger to 15 ns.

Command message:

:TRIGger:PATTern:HLDTime 1.50E-08

TRIG:PATT:HLDT 1.50E-08

Query message:

TRIG:PATT:HLDT?

Response message:

1.50E-08

RELATED COMMANDS :TRIGger:PATTern:HOLDoff

:TRIGger:PATTern:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the pattern trigger.

The query returns the current holdoff type of the pattern

trigger.

COMMAND SYNTAX :TRIGger:PATTern:HOLDoff <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

 OFF means to turn off the holdoff

EVENts means the amount of events that the oscilloscope

counts before re-arming the trigger circuitry

◆ TIME means the amount of time that the oscilloscope

waits before re-arming the trigger circuitry

QUERY SYNTAX :TRIGger:PATTern:HOLDoff?

RESPONSE FORMAT <holdoff_type>

< holdoff_type >:= {OFF|EVENts|TIME}

EXAMPLE The following command turns off the holdoff of the pattern

trigger.

Command message:

:TRIGger:PATTern:HOLDoff OFF

TRIG:PATT:HOLD OFF

Query message: TRIG:PATT:HOLD?

Response message:

OFF

RELATED COMMANDS :TRIGger:PATTern:HLDEVent

:TRIGger:PATTern:HLDTime :TRIGger:PATTern:HSTart

:TRIGger:PATTern:HSTart

Command/Query

DESCRIPTION The command sets the start holdoff mode of the pattern

trigger.

The query returns the current start holdoff mode of the pattern

trigger.

COMMAND SYNTAX :TRIGger:PATTern:HSTart <start holdoff>

<start holdoff>:= {LAST TRIG|ACQ START}

LAST_TRIG means the initial position of holdoff is the

time of the last trigger.

ACQ_START means the initial position of holdoff is the

first time point satisfying the trigger condition.

QUERY SYNTAX :TRIGger:PATTern:HSTart?

RESPONSE FORMAT <start holdoff>

<start_holdoff>:= {LAST_TRIG|ACQ_START}

EXAMPLE The following command sets the start holdoff mode to

LAST_TRIG (last trigger).

Command message:

:TRIGger:PATTern:HSTart LAST_TRIG

TRIG:PATT:HST LAST_TRIG

Query message: TRIG:PATT:HST?

Response message: *LAST_TRIG*

RELATED COMMANDS :TRIGger:PATTern:HOLDoff

:TRIGger:PATTern:INPut

Command/Query

DESCRIPTION The command specifies the logical input condition for the

channel (Cx) and digital channel (Dx) of the pattern trigger.

The query returns the logical input condition of pattern trigger.

COMMAND SYNTAX :TRIGger:PA

:TRIGger:PATTern:INPut <logic>[...[,<logic>]]

 $< logic > := {X|L|H}$

X means the "don't care" state.

H means the logic high state.

◆ L means the logic low state.

Note

Parameters are configured to corresponding sources in the

order of C1-C<n>, D0-D15.

QUERY SYNTAX :TRIGger:PATTern:INPut?

RESPONSE FORMAT <input>

 $<input>:= {X|L|H}$

EXAMPLE The following command sets the logic input for channel 1 to H,

for channel 2 to H, for channel 3 to L, for channel 4 to X and

for all digital channel to X.

Command message:

:TRIGger:PATTern:INPut

TRIG:PATT:INP H,H,L,X,X,X,X,X,X,X,X,X,X,X,X,X,X,X,X,X

Query message:

TRIG:PATT:INP?

Response message:

:TRIGger:PATTern:LEVel

Command/Query

DESCRIPTION The command sets the trigger level of source in the pattern

trigger.

The query returns the current trigger level of source in the

pattern trigger.

COMMAND SYNTAX :TRIGger:PATTern:LEVel <source>,<value>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X

<option>:= {RISing|FALLing} when <type> is EDGE or

EDGE DLY

EXAMPLE The following command sets the qualified type of the qualified

trigger to edge.

Command message:

:TRIGger:QUALified:TYPE EDGE

TRIG:QUAL:TYPE EDGE

Query message: TRIG:QUAL:TYPE?

Response message:

EDGE

:TRIGger:DELay Commands

The :TRIGGER:DELay subsystem commands control the delay trigger parameters.

• :TRIGger:DELay:SOURce

• :TRIGger:DELay:SOURce2

• :TRIGger:DELay:SLOPe

• :TRIGger:DELay:SLOPe2

• :TRIGger:DELay:LEVel

• :TRIGger:DELay:LEVel2

• :TRIGger:DELay:LIMit

• :TRIGger:DELay:TUPPer

• :TRIGger:DELay:TLOWer

:TRIGger:DELay:SOURce

Command/Query

DESCRIPTION The command sets the level state of trigger source A in the

delay trigger.

The query returns the current level state of trigger source A in

the delay trigger.

COMMAND SYNTAX :TRIGger:DELay:SOURce <state>[...[, <state>]]

<state>:= {X|L|H}

X means the "don't care" state.

H means the logic high state.

L means the logic low state.

Note:

Parameters are configured to corresponding sources in the order of C1-C<n>, D0-D15.

QUERY SYNTAX :TRIGger:DELay:SOURce?

RESPONSE FORMAT <state>

<state>:= {X|L|H}

EXAMPLE The following command sets the logic input for channel 1 to H,

for channel 2 to L, for channel 3 to L, for channel 4 to X and for

all digital channel to X.

Command message:

:TRIGger:DELay:SOURce

Query message:

TRIG:DEL:SOUR?

Response message:

RELATED COMMANDS :TRIGger:DELay:SOURce2

:TRIGger:DELay:SOURce2

Command/Query

DESCRIPTION The command sets the trigger source B in the delay trigger.

The query returns the current trigger source B in the delay

trigger.

COMMAND SYNTAX :TRIGger:DELay:SOURce2 <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:DELay:SOURce2?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the trigger source of souce B in

the delay trigger to channel 2.

Command message:

:TRIGger:DELay:SOURce2 C2

TRIG:DEL:SOUR2 C2

Query message: TRIG:DEL:SOUR2?

Response message:

C2

RELATED COMMANDS :TRIGger:DELay:SOURce

:TRIGger:DELay:SLOPe

Command/Query

DESCRIPTION The command sets the slope of source A in the delay trigger.

The query returns the slope of source A in the delay trigger.

COMMAND SYNTAX :TRIGger:DELay:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:DELay:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of source A in the

delay trigger.

Command message:

:TRIGger:DELay:SLOPe RISing

TRIG:DEL:SLOP RIS

Query message: TRIG:DEL:SLOP?

Response message:

RISing

:TRIGger:DELay:SLOPe2

Command/Query

DESCRIPTION The command sets the slope of source B in the delay trigger.

The query returns the slope of source B in the delay trigger.

COMMAND SYNTAX :TRIGger:DELay:SLOPe2 <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:DELay:SLOPe2?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of source B in the

delay trigger.

Command message:

:TRIGger:DELay:SLOPe2 RISing

TRIG:DEL:SLOP2 RIS

Query message: TRIG:DEL:SLOP2?

Response message:

RISing

:TRIGger:DELay:LEVel

Command/Query

DESCRIPTION The command sets the level of source A in the delay trigger.

The query returns the current trigger level of source A in the

delay trigger.

COMMAND SYNTAX :TRIGger:DELay:LEVel <source>,<value>

<source>:= {C<n>}

<n>:= 1 to (# analog channels) in NR1 format, including an integer and no decimal point, like 1.

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X HD SDS1000X HD SDS800X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:DELay:LEVel? <source>

<source>:= {C<n>}

RESPONSE FORMAT <source>,<value>

<source>:= {C<n>}

<value>:= Value in NR3 format.

EXAMPLE The following command sets delay trigger source A to C2 and

level to 0.5 V

Command message:

:TRIGger:DELay:LEVel C2,5.00E-01

TRIG:DEL:LEV C2,5.00E-01

Query message:

TRIG:DEL:LEV? C2
Response message:

C2,5.00E-01

RELATED COMMANDS :TRIGger:DELay:LEVel2

:TRIGger:DELay:LEVel2

Command/Query

DESCRIPTION The command sets the trigger level of source B in the delay

trigger.

The query returns the current trigger level of source B in the

delay trigger.

COMMAND SYNTAX :TRIGger:DELay:LEVel2 <level value>

<level_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X H SDS2000X HD SDS1000X HD SDS800X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:DELay:LEVel2?

RESPONSE FORMAT < level value>

<level_value>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

EXAMPLE The following command sets source B level of the delay trigger

to 0.5 V

Command message:

:TRIGger:DELay:LEVel2 5.00E-01

TRIG:DEL:LEV2 5.00E-01

Query message:

TRIG:DEL:LEV2?

Response message:

5.00E-01

RELATED COMMANDS :TRIGger:DELay:LEVel

:TRIGger:DELay:LIMit

Command/Query

DESCRIPTION The command sets the limit range type of the delay trigger.

The query returns the current limit range type of the delay

trigger.

COMMAND SYNTAX :TRIGger:DELay:LIMit <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

QUERY SYNTAX :TRIGger:DELay:LIMit?

RESPONSE FORMAT <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

EXAMPLE The following command sets the limit of the delay trigger to

LESSthan.

Command message:

:TRIGger:DELay:LIMit LESSthan

TRIG:DEL:LIM LESS

Query message: TRIG:DEL:LIM?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:DELay:TLOWer

:TRIGger:DELay:TUPPer

:TRIGger:DELay:TUPPer

Command/Query

DESCRIPTION The command sets the limit upper value of the delay trigger

limit type.

The query returns the current limit upper value of the delay

trigger limit type.

COMMAND SYNTAX :TRIGger:DELay:TUPPer <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value is [3.00E-09,

2.00E+01].

Note:

• The upper value cannot be less than the lower value using by the command :TRIGger:DELay:TLOWer.

The command is not valid when the limit range type is

GREATerthan.

QUERY SYNTAX :TRIGger:DELay:TUPPer?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the upper value of the delay

trigger to 30 ns, when the limit range type is OUTer.

Command message:

:TRIGger:DELay:TUPPer 3.00E-08

TRIG:DEL:TUPP 3.00E-08

Query message:

TRIG:DEL:TUPP?

Response message:

3.00E-08

RELATED COMMANDS :TRIGger:DELay:LIMit

:TRIGger:DELay:TLOWer

:TRIGger:DELay:TLOWer

Command/Query

DESCRIPTION The command sets the limit lower value of the delay trigger

limit type.

The query returns the current limit lower value of the delay

trigger limit type.

COMMAND SYNTAX :TRIGger:DELay:TLOWer <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value is [2.00E-09,

2.00E+01].

Note:

• The lower value cannot be greater than the upper value using by the command :TRIGger:DELay:TUPPer.

The command is not valid when the limit range type is

LESSthan.

QUERY SYNTAX :TRIGger:DELay:TLOWer?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the lower time of the delay trigger

to 10 ns.

Command message:

:TRIGger:DELay:TLOWer 1.00E-08

TRIG:DEL:TLOW 1.00E-08

Query message:

TRIG:DEL:TLOW?

Response message:

1.00E-08

RELATED COMMANDS :TRIGger:DELay:LIMit

:TRIGger:DELay:TUPPer

:TRIGger:NEDGe Commands

The:TRIGGER:NEDGe subsystem commands control the Nth Edge trigger parameters.

• :TRIGger:NEDGe:SOURce

• :TRIGger:NEDGe:NREJect

:TRIGger:NEDGe:SOURce

Command/Query

DESCRIPTION The command sets the trigger source of the Nth edge trigger.

The query returns the current trigger source of the Nth edge

trigger.

COMMAND SYNTAX :TRIGger:NEDGe:SOURce <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:NEDGe:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the trigger source of the Nth edge

trigger as C1.

Command message:

:TRIGger:NEDGe:SOURce C1

TRIG:NEDG:SOUR C1

Query message: TRIG:NEDG:SOUR?

Response message:

C1

RELATED COMMANDS :TRIGger:NEDGe:LEVel

:TRIGger:NEDGe:SLOPe

Command/Query

DESCRIPTION The command sets the slope of the Nth edge trigger.

The query returns the current slope setting of the Nth edge

trigger.

COMMAND SYNTAX :TRIGger:NEDGe:SLOPe <slope_type>

<slope_type>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:NEDGe:SLOPe?

RESPONSE FORMAT <slope_type>

<slope_type>:= {RISing|FALLing}

EXAMPLE The following command sets the rising slope of the Nth edge

trigger.

Command message:

:TRIGger:NEDGe:SLOPe RISing

TRIG:NEDG:SLOP RIS

Query message: TRIG:NEDG:SLOP?

Response message:

RISing

:TRIGger:NEDGe:IDLE

Command/Query

DESCRIPTION The command sets the idle time of the Nth edge trigger.

The query returns the current idle time of the Nth edge trigger.

COMMAND SYNTAX :TRIGger:NEDGe:IDLE <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	
SDS5000X	
SDS6000 Pro	
SDS6000A	
SDS6000L	[8.00E-09, 2.00E+01]
SDS3000X HD	-
SDS2000X HD	
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:NEDGe:IDLE?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the idle time of the Nth edge

trigger to 15 ns.

Command message:

:TRIGger:NEDGe:IDLE 1.50E-08 TRIG:NEDG:IDLE 1.50E-08

Query message:

TRIG:NEDG:IDLE?

Response message:

1.50E-08

:TRIGger:NEDGe:EDGE

Command/Query

DESCRIPTION This command sets the edge num of the Nth edge trigger.

The query returns the current edge num of the Nth edge

trigger.

COMMAND SYNTAX :TRIGger:NEDGe:EDGE <value>

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1, 65535].

QUERY SYNTAX :TRIGger:NEDGe:EDGE?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the edge num of the Nth edge

trigger to 3.

Command message:

:TRIGger:NEDGe:EDGE 3
TRIG:NEDG:EDGE 3

Query message: TRIG:NEDG:EDGE?

Response message:

3

:TRIGger:NEDGe:LEVel

Command/Query

DESCRIPTION The command sets the trigger level of the Nth edge trigger.

> The query returns the current trigger level value of the Nth edge trigger.

:TRIGger:NEDGe:LEVel <level_value> **COMMAND SYNTAX**

> <level value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X HD SDS1000X HD SDS800X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:NEDGe:LEVel?

RESPONSE FORMAT <level value>

> <level_value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2.

EXAMPLE The following command sets the trigger level of the Nth edge

trigger to 0.5 V.

Command message:

:TRIGger:NEDGe:LEVel 5.00E-01 TRIG:NEDG:LEV 5.00E-01

Query message: TRIG:NEDG:LEV?

Response message:

5.00E-01

RELATED COMMANDS :TRIGger:NEDGe:SOURce

:TRIGger:NEDGe:HOLDoff

Command/Query

DESCRIPTION The command selects the holdoff type of the Nth edge trigger.

The query returns the current holdoff type of the Nth edge

trigger.

COMMAND SYNTAX :TRIGger:NEDGe:HOLDoff <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

- OFF means to turn off the holdoff.
- EVENts means the number of trigger events that the oscilloscope counts before re-arming the trigger circuitry.
- TIME means the amount of time that the oscilloscope waits before re-arming the trigger circuitry.

QUERY SYNTAX :TRIGger:NEDGe:HOLDoff?

RESPONSE FORMAT <holdoff_type>

<holdoff_type>:= {OFF|EVENts|TIME}

EXAMPLE The following command turns off the holdoff of the Nth edge

trigger.

Command message:

:TRIGger:NEDGe:HOLDoff OFF

TRIG:NEDG:HOLD OFF

Query message: TRIG:NEDG:HOLD?

Response message:

OFF

RELATED COMMANDS :TRIGger:NEDGe:HLDEVent

:TRIGger:NEDGe:HLDTime :TRIGger:NEDGe:HSTart

:TRIGger:NEDGe:HLDTime

Command/Query

DESCRIPTION The command sets the holdoff time of the Nth edge trigger.

The query returns the current holdoff time of the Nth edge

trigger.

COMMAND SYNTAX :TRIGger:NEDGe:HLDTime <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	
SDS5000X	
SDS6000 Pro	
SDS6000A	
SDS6000L	[8.00E-09, 3.00E+01]
SDS3000X HD	-
SDS2000X HD	
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:NEDGe:HLDTime?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the holdoff time of the Nth edge

trigger to 15 ns.

Command message:

:TRIGger:NEDGe:HLDTime 1.50E-08

TRIG:NEDG:HLDT 1.50E-08

Query message:

TRIG:NEDG:HLDT?

Response message:

1.50E-08

RELATED COMMANDS :TRIGger:NEDGe:HOLDoff

:TRIGger:NEDGe:HLDEVent

Command/Query

DESCRIPTION This command sets the number of holdoff events of the Nth

edge trigger.

The query returns the current number of holdoff events of the

Nth edge trigger.

COMMAND SYNTAX :TRIGger:NEDGe:HLDEVent <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1. The range of the value is [1, 100000000].

QUERY SYNTAX :TRIGger:NEDGe:HLDEVent?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the number of holdoff events of

the Nth edge trigger to 3.

Command message:

:TRIGger:NEDGe:HLDEVent 3

TRIG:NEDG:HLDEV 3

Query message:

TRIG:NEDG:HLDEV?

Response message:

3

RELATED COMMANDS :TRIGger:NEDGe:HOLDoff

:TRIGger:NEDGe:HSTart

Command/Query

DESCRIPTION The command defines the initial position of the Nth edge

trigger holdoff.

The query returns the initial position of the Nth edge trigger

holdoff.

COMMAND SYNTAX :TRIGger:NEDGe:HSTart <start holdoff>

<start_holdoff>:= {LAST_TRIG|ACQ_START}

LAST_TRIG means the initial position of holdoff is the

time of the last trigger.

ACQ_START means the initial position of holdoff is the

first time point satisfying the trigger condition.

QUERY SYNTAX :TRIGger:NEDGe:HSTart?

RESPONSE FORMAT <start_holdoff>

<start holdoff>:= {LAST TRIG|ACQ START}

EXAMPLE The following command sets the start holdoff mode to last

trigger.

Command message:

:TRIGger:NEDGe:HSTart LAST_TRIG

TRIG:NEDG:HST LAST_TRIG

Query message: TRIG:NEDG:HST?

Response message:

LAST TRIG

RELATED COMMANDS :TRIGger:NEDGe:HOLDoff

:TRIGger:NEDGe:NREJect

Command/Query

DESCRIPTION The command sets the state of the noise rejection.

The query returns the current state of the noise rejection.

COMMAND SYNTAX :TRIGger:NEDGe:NREJect <state>

<state>:= {OFF|ON}

QUERY SYNTAX :TRIGger:NEDGe:NREJect?

RESPONSE FORMAT <state>

<state>:= {OFF|ON}

EXAMPLE The following command turns on noise rejection.

Command message:

:TRIGger:NEDGe:NREJect ON

TRIG:NEDG:NREJ ON

Query message: TRIG:NEDG:NREJ?

Response message:

• :TRIGger:SHOLd:LIMit

• :TRIGger:SHOLd:TUPPer

• :TRIGger:SHOLd:TLOWer

:TRIGger:SHOLd:TYPE

Command/Query

DESCRIPTION The command sets the trigger type of the setup/hold trigger.

The query returns the current the trigger type of the setup/hold

trigger.

COMMAND SYNTAX :TRIGger:SHOLd:TYPE <type>

<type>:= {SETup|HOLD}

QUERY SYNTAX :TRIGger:SHOLd:TYPE?

RESPONSE FORMAT <slope>

<slope>:= {SETup|HOLD}

EXAMPLE The following command sets the setup type of the setup/hold

trigger.

Command message:

:TRIGger:SHOLd:TYPE SETup

TRIG:SHOL:TYPE SET

Query message: TRIG:SHOL:TYPE?

Response message:

SETup

:TRIGger:SHOLd:CSource

Command/Query

DESCRIPTION The command sets the clock source of the setup/hold trigger.

The query returns the current clock source of the setup/hold

trigger.

COMMAND SYNTAX :TRIGger:SHOLd:CSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:SHOLd:CSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the clock source of the setup/hold

trigger as C1.

Command message:

:TRIGger:SHOLd:CSource C1

TRIG:SHOL:CS C1

Query message: TRIG:SHOL:CS?

Response message:

C1

RELATED COMMANDS :TRIGger:SHOLd:CTHReshold

:TRIGger:SHOLd:CTHReshold

Command/Query

DESCRIPTION The command sets the threshold of clock source of the

setup/hold trigger.

The query returns the current threshold of clock source of the

setup/hold trigger.

COMMAND SYNTAX :TRIGger:SHOLd:CTHReshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below

for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X HD SDS1000X HD SDS800X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:SHOLd:CTHReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of clock source of

setup/hold trigger to 1.5 V.

Command message:

:TRIGger:SHOLd:CTHReshold 1.50E+00

TRIG:SHOL:CTHR 1.50E+00

Query message:

<level value>:= {LOW|HIGH}

QUERY SYNTAX :TRIGger:SHOLd:LEVel?

RESPONSE FORMAT < level_state>

<level_value>:= {LOW|HIGH}

EXAMPLE The following command sets the high level of data source of

the setup/hold trigger.

Command message:

:TRIGger:SHOLd:LEVel HIGH

TRIG:SHOL:LEV HIGH

Query message:

TRIG:SHOL:LEV?

Response message:

HIGH

:TRIGger:SHOLd:LIMit

Command/Query

DESCRIPTION The command sets the limit range type of the setup/hold

trigger.

The query returns the current limit range type of the setup/hold

trigger.

COMMAND SYNTAX :TRIGger:SHOLd:LIMit <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

QUERY SYNTAX :TRIGger:SHOLd:LIMit?

RESPONSE FORMAT <type>

<type>:= {LESSthan|GREATerthan|INNer|OUTer}

EXAMPLE The following command sets the limit of the setup/hold trigger

to LESSthan.

Command message:

:TRIGger:SHOLd:LIMit LESSthan

TRIG:SHOL:LIM LESS

Query message: TRIG:SHOL:LIM?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:SHOLd:TLOWer

:TRIGger:SHOLd:TUPPer

:TRIGger:SHOLd:TUPPer

Command/Query

DESCRIPTION The command sets the upper value of the setup/hold trigger

limit type.

The query returns the current upper value of the setup/hold

trigger limit type.

COMMAND SYNTAX :TRIGger:SHOLd:TUPPer <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value is [2.00E-09,

2.00E+01].

Note:

• The upper value cannot be less than the lower value using by the command :TRIGger:SHOLd:TLOWer.

• The command is not valid when the limit range type is

GREATerthan.

QUERY SYNTAX :TRIGger:SHOLd:TUPPer?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the upper value of the setup/hold

trigger to 30 ns, when the limit range type is OUTer.

Command message:

:TRIGger:SHOLd:TUPPer 3.00E-08

TRIG:SHOL:TUPP 3.00E-08

Query message:

TRIG:SHOL:TUPP?

Response message:

3.00E-08

RELATED COMMANDS :TRIGger:SHOLd:LIMit

:TRIGger:SHOLd:TLOWer

:TRIGger:SHOLd:TLOWer

Command/Query

DESCRIPTION The command sets the lower value of the setup/hold trigger

limit type.

The query returns the current lower value of the setup/hold

trigger limit type.

COMMAND SYNTAX :TRIGger:SHOLd:TLOWer <value>

<value>:= Value in NR3 format, including a decimal point and exponent, like 1.23E+2. The range of the value is [2.00E-09,

2.00E+01].

Note:

• The lower value cannot be greater than the upper value using by the command :TRIGger:SHOLd:TUPPer.

• The command is not valid when the limit range type is LESSthan.

QUERY SYNTAX :TRIGger:SHOLd:TLOWer?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the lower time of the setup/hold

trigger to 10 ns.

Command message:

:TRIGger:SHOLd:TLOWer 1.00E-08

TRIG:SHOL:TLOW 1.00E-08

Query message: TRIG:SHOL:TLOW?

Response message:

1.00E-08

RELATED COMMANDS :TRIGger:SHOLd:LIMit

Command/Query

DESCRIPTION The command sets the address of the IIC bus trigger.

The query returns the current address of the IIC bus trigger.

COMMAND SYNTAX :TRIGger:IIC:ADDRess <addr>

<addr>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 1024], where

1024 represents 0xXX.

QUERY SYNTAX :TRIGger:IIC:ADDRess?

RESPONSE FORMAT <addr>

<addr>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the address of the IIC bus trigger

to 0x0a.

Command message:

:TRIGger:IIC:ADDRess 10

TRIG:IIC:ADDR 10

Query message:

TRIG:IIC:ADDR?

Response message:

10

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:ALENgth

Command/Query

DESCRIPTION The command sets the length of address of the IIC bus trigger.

The query returns the current length of address of the IIC bus

trigger.

COMMAND SYNTAX :TRIGger:IIC:ALENgth <length>

<length>:= {7BIT|10BIT}

QUERY SYNTAX :TRIGger:IIC:ALENgth?

RESPONSE FORMAT <addr_length>

<addr_length>:= {7BIT|10BIT}

EXAMPLE The following command sets the length of address of the IIC

bus trigger to 10 bit.

Command message:

:TRIGger:IIC:ALENgth 10BIT

TRIG:IIC:ALEN 10BIT

Query message: TRIG:IIC:ALEN?

Response message:

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:CONDition

Command/Query

DESCRIPTION The command sets the trigger condition of the IIC bus.

The query returns the current trigger condition of the IIC bus.

COMMAND SYNTAX :TRIGger:IIC:CONDition < condition>

<condition>:=

{STARt|STOP|RESTart|NACK|EEPRom|7ADDRess|10ADDRe

ss|DLENgth}

QUERY SYNTAX :TRIGger:IIC:CONDition?

RESPONSE FORMAT <condition>

<condition>:=

{STARt|STOP|RESTart|NACK|EEPRom|7ADDRess|10ADDRe

ss|DLENgth}

EXAMPLE The following command sets the condition of the IIC bus

trigger to STOP.

Command message:

:TRIGger:IIC:CONDition STOP

TRIG:IIC:COND STOP

Query message: TRIG:IIC:COND?

Response message:

STOP

:TRIGger:IIC:DAT2 Command/Query

DESCRIPTION The command sets the data2 of the IIC bus trigger.

The query returns the current data2 of the IIC bus trigger.

COMMAND SYNTAX :TRIGger:IIC:DAT2 <data>

<data>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 256].

Note:

Use the don't care data (256) to ignore the data2 value.

QUERY SYNTAX :TRIGger:IIC:DAT2?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data2 of the IIC bus trigger to

0x0b.

Command message: :TRIGger:IIC:DAT2 11
TRIG:IIC:DAT2 11

Query message: TRIG:IIC:DAT2?

Response message:

11

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:DATA Command/Query

DESCRIPTION The command sets the data of the IIC bus trigger.

The query returns the current data of the IIC bus trigger.

COMMAND SYNTAX :TRIGger:IIC:DATA <data>

<data>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 256].

Note:

Use the don't care data (256) to ignore the data value.

QUERY SYNTAX :TRIGger:IIC:DATA?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data of the IIC bus trigger to

0x2A.

Command message: :TRIGger:IIC:DATA 42
TRIG:IIC:DATA 42

Query message: TRIG:IIC:DATA?

Response message:

42

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:DAT2

:TRIGger:IIC:DLENgth

Command/Query

DESCRIPTION The command sets the data length of the IIC bus trigger.

The query returns the current data length of the IIC bus trigger.

COMMAND SYNTAX :TRIGger:IIC:DLENgth <length>

<length>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [1, 12].

QUERY SYNTAX :TRIGger:IIC:DLENgth?

RESPONSE FORMAT < length>

<length>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data length of the IIC bus

trigger to 10 bytes.

Command message: :TRIGger:IIC:DLENgth 10

TRIG:IIC:DLEN 10

Query message:

TRIG:IIC:DLEN?

Response message:

10

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:LIMit Command/Query

DESCRIPTION The command sets the data comparison type when the trigger

condition is EEPROM on the IIC bus trigger.

The query returns the current the limit range type when the

trigger condition is EEPROM.

COMMAND SYNTAX :TRIGger:IIC:LIMit limit_type>

type>:= {EQUal|GREaterthan|LESSthan}

QUERY SYNTAX :TRIGger:IIC:LIMit?

RESPONSE FORMAT

limit_type>:= {EQUal|GREaterthan|LESSthan}

EXAMPLE The following command sets the limit range type when the

trigger condition is EEPROM to LESSthan.

Command message:

:TRIGger:IIC:LIMit LESSthan

TRIG:IIC:LIM LESS

Query message: TRIG:IIC:LIM?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:RWBit

Command/Query

DESCRIPTION The command sets whether the trigger frame is read address

or write address when the IIC trigger condition is 7 or 10

ADDR&DATA.

The query returns the current read write bit of the IIC bus

trigger.

COMMAND SYNTAX :TRIGger:IIC:RWBit <type>

<type>:= {WRITe|READ|ANY}

QUERY SYNTAX :TRIGger:IIC:RWBit?

RESPONSE FORMAT <type>

<type>:= {WRITe|READ|ANY}

EXAMPLE The following command sets to trigger on the read address of

the IIC bus.

Command message:

:TRIGger:IIC:RWBit READ TRIG:IIC:RWB READ

Query message: TRIG:IIC:RWB?

Response message:

READ

RELATED COMMANDS :TRIGger:IIC:CONDition

:TRIGger:IIC:SCLSource

Command/Query

DESCRIPTION The command selects the SCL source of the IIC bus trigger.

This query returns the current SCL source of the IIC bus

trigger.

COMMAND SYNTAX :TRIGger:IIC:SCLSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:IIC:SCLSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the SCL source of the IIC bus

trigger as channel 2.

Command message:

:TRIGger:IIC:SCLSource C2

TRIG:IIC:SCLS C2

Query message: TRIG:IIC:SCLS?

Response message:

C2

RELATED COMMANDS :TRIGger:IIC:SCLThreshold

:TRIGger:IIC:SDASource

:TRIGger:IIC:SCLThreshold

Command/Query

DESCRIPTION The command sets the threshold of the SCL on IIC bus trigger.

This query returns the current threshold of the SCL on IIC bus

trigger.

COMMAND SYNTAX :TRIGger:IIC:SCLThreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:IIC:SCLThreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the SCL on IIC

bus trigger to 1.5 V.

Command message:

:TRIGger:IIC:SCLThreshold 1.50E+00

TRIG:IIC:SCLT 1.50E+00

Query message:

TRIG:IIC:SCLT?

Response message: 1.50E+00

1.002

RELATED COMMANDS :TRIGger:IIC:SCLSource

:TRIGger:IIC:SDASource

Command/Query

DESCRIPTION The command selects the SDA source of the IIC bus trigger.

This query returns the current SDA source of the IIC bus trigger.

COMMAND SYNTAX :TRIGger:IIC:SDASource <source>

<source>:= $\{C<n>|D<d>\}$

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:IIC:SDASource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the SDA source of the IIC bus

trigger as channel 2.

Command message:

RELATED COMMANDS :TRIGger:SPI:CSSource

:TRIGger:SPI:CSTYpe

Command/Query

DESCRIPTION The command sets the chip selection type of the SPI bus trigger.

This query returns the current chip selection type of the SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:CSTYpe <type>

<type>:= {NCS|CS|TIMeout[,<time>]}

- CS means set to chip select state
- NCS means set to non-chip select state
- ◆ TIMeout indicates set to clock timeout status

<time>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value is [1.00E-07, 5.00E-03].

QUERY SYNTAX :TRIGger:SPI:CSTYpe?

RESPONSE FORMAT <type>

<type>:= {NCS|CS|TIMeout[,<time>]}

<time>:= Value in NR3 format.

EXAMPLE The following command sets the chip selection type of the SPI

bus trigger to CS.

Command message:

:TRIGger:SPI:CSTYpe CS TRIG:SPI:CSTY CS

Query message: TRIG:SPI:CSTY?

Response message:

CS

:TRIGger:SPI:DATA

Command

DESCRIPTION The command sets the data of the SPI bus trigger.

COMMAND SYNTAX :TRIGger:SPI:DATA <data>[,<data>[,,<data>]]]

 $<data>:= {0|1|X}$

Note:

 The number of parameters should be consistent with the data length using by the command :TRIGger:SPI:DLENgth.

 Parameters are assigned to each bit in order from high to low.

EXAMPLE

The following command sets the data of the SPI bus trigger to 0x82 when the data length is 8.

Command message:

:TRIGger:SPI:DATA 1,0,0,0,0,0,1,0 TRIG:SPI:DATA 1,0,0,0,0,0,1,0

RELATED COMMANDS :TRIGger:SPI:DLENgth

:TRIGger:SPI:DLENgth

Command/Query

DESCRIPTION The command sets the data length of the SPI bus trigger.

The query returns the current data length of the SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:DLENgth <data_length>

<data_length>:= Value in NR1 format, including an integer and

no decimal point, like 1. The range of the value is [4, 96].

QUERY SYNTAX :TRIGger:SPI:DLENgth?

RESPONSE FORMAT <data_length>

<data_length>:= Value in NR1 format, including an integer and

no decimal point, like 1.

EXAMPLE The following command sets the data length of the SPI bus

trigger to 10 bit.

Command message:

:TRIGger:SPI:DLENgth 10

TRIG:SPI:DLEN 10

Query message: TRIG:SPI:DLEN?

Response message:

10

:TRIGger:SPI:LATChedge

Command/Query

DESCRIPTION The command selects the sampling edge of CLK on SPI bus

trigger.

This query returns the sampling edge of CLK on SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:CLK:LATChedge <slope>

<slope>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:SPI:LATC?

RESPONSE FORMAT <slope>

<slope>:= {RISing|FALLing}

EXAMPLE The following command sets the threshold judgment condition

of CLK on SPI bus trigger to RISing.

Command message:

:TRIGger:SPI:LATChedge RISing

:TRIG:SPI:LATC RIS

Query message: :TRIG:SPI:LATC?

Response message:

RISing

:TRIGger:SPI:MISOSource

Command/Query

DESCRIPTION The command selects the MISO source of the SPI bus trigger.

This query returns the current MISO source of the SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:MISOSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:SPI:MISOSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the MISO source of the SPI bus

trigger as channel 2.

Command message:

:TRIGger:SPI:MISOSource C2

TRIG:SPI:MISOS C2

Query message: TRIG:SPI:MISOS?

Response message:

Command/Query

DESCRIPTION The command selects the MOSI source of the SPI bus trigger.

This query returns the current MOSI source of the SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:MOSISource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:SPI:MOSISource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the MOSI source of the SPI bus

trigger as channel 2.

Command message:

:TRIGger:SPI:MOSISource C2

TRIG:SPI:MOSIS C2

Query message: TRIG:SPI:MOSIS?

Response message:

C2

RELATED COMMANDS :TRIGger:SPI:MOSIThreshold

:TRIGger:SPI:MOSIThreshold

Command/Query

DESCRIPTION The command sets the threshold of the MOSI on SPI bus

trigger.

The query returns the current threshold of the MOSI on SPI

bus trigger.

COMMAND SYNTAX :TRIGger:SPI:MOSIThreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:SPI:MOSIThreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the MOSI on SPI

bus trigger to 1.5 V.

Command message:

:TRIGger:SPI:MOSIThreshold 1.50E+00

TRIG:SPI:MOSIT 1.50E+00

Query message:

TRIG:SPI:MOSIT?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:SPI:MOSISource

:TRIGger:SPI:NCSSource

Command/Query

DESCRIPTION The command sets the NCS source of the SPI bus trigger.

The query returns the current NCS source of the SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:NCSSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:SPI:NCSSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the NCS source of the SPI

bus trigger as D0.

Command message:

:TRIGger:SPI:NCSSource D0

:TRIG:SPI:NCSS D0

Query message: :TRIG:SPI:NCSS?

Response message:

D0

RELATED COMMANDS :TRIGger:SPI:NCSThreshold

:TRIGger:SPI:NCSThreshold

Command/Query

DESCRIPTION The command sets the threshold of the NCS on SPI bus

trigger.

This query returns the current threshold of the NCS on SPI

bus trigger.

COMMAND SYNTAX :TRIGger:SPI:NCSThreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:SPI:NCSThreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the NCS on IIC

bus trigger to 1.5 V.

Command message:

:TRIGger:SPI:NCSThreshold 1.50E+00

TRIG:SPI:NCST 1.50E+00

Query message:

TRIG:SPI:NCST?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:SPI:NCSSource

:TRIGger:SPI:TTYPe

Command/Query

DESCRIPTION The command sets the trigger type of the SPI bus trigger.

The query returns the current trigger type of the SPI bus

trigger.

COMMAND SYNTAX :TRIGger:SPI:TTYPe <trigger_type>

<trigger_type>:= {MISO|MOSI}

QUERY SYNTAX :TRIGger:SPI:TTYPe?

RESPONSE FORMAT <trigger_type>

<trigger_type>:= {MISO|MOSI}

EXAMPLE The following command sets the trigger type of the SPI bus

trigger to MOSI.

Command message:

:TRIGger:SPI:TTYPe MOSI TRIG:SPI:TTYP MOSI

Query message: TRIG:SPI:TTYP?

Response message:

MOSI

:TRIGger:UART Commands

The :TRIGGER:UART subsystem commands control the UART bus trigger parameters.

• :TRIGger:UART:BAUD

• :TRIGger:UART:BITorder

• :TRIGger:UART:CONDition

• :TRIGger:UART:DATA

• :TRIGger:UART:DLENgth

• :TRIGger:UART:IDLE

• :TRIGger:UART:LIMit

• :TRIGger:UART:PARity

• :TRIGger:UART:RXSource

:TRIGger:UART:

• :TRIGger:UART:STOP

:TRIGger:UART:TTYPe

• :TRIGger:UART:TXSource

:TRIGger:UART:

:TRIGger:UART:BAUD

Command/Query

DESCRIPTION The command sets the baud rate of the UART bus trigger.

The query returns the current baud rate of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:BAUD <baud>

<baud>:=

{600bps|1200bps|2400bps|4800bps|9600bps|19200bps|38400

bps|57600bps|115200bps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [300,

20000000].

QUERY SYNTAX :TRIGger:UART:BAUD?

RESPONSE FORMAT

<b

<baud>:=

 $\{600bps|1200bps|2400bps|4800bps|9600bps|19200bps|38400$

bps|57600bps|115200bps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the baud rate of the UART bus

trigger to 9600bps.

Command message:

:TRIGger:UART:BAUD 9600bps TRIG:UART:BAUD 9600bps

Query message:

TRIG:UART:BAUD?

Response message:

9600bps

:TRIGger:UART:BITorder

Command/Query

DESCRIPTION The command sets the bit order of the UART trigger.

The query returns the current bit order of the UART trigger.

COMMAND SYNTAX :TRIGger:UART:BITorder <order>

<order>:= {LSM|MSB}

QUERY SYNTAX :TRIGger:UART:BITorder?

RESPONSE FORMAT <order>

<order>:= {LSM|MSB}

EXAMPLE The following command sets the bit order to LSB.

Command message:

:TRIGger:UART:BITorder LSB

TRIG:UART:BIT LSB

Query message: TRIG:UART:BIT?

Response message:

LSB

:TRIGger:UART:CONDition

Command/Query

DESCRIPTION The command sets the condition of the UART bus trigger.

The query returns the current condition of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:CONDition <condition>

<condition>:= {STARt|STOP|DATA|ERRor}

QUERY SYNTAX :TRIGger:UART:CONDition?

RESPONSE FORMAT <condition>

<condition>:= {STARt|STOP|DATA|ERRor}

EXAMPLE The following command sets the condition of the UART bus

trigger to STOP.

Command message:

:TRIGger:UART:CONDition STOP

TRIG:UART:COND STOP

Query message: TRIG:UART:COND?

Response message:

STOP

:TRIGger:UART:DATA

Command/Query

DESCRIPTION The command sets the data of the UART bus trigger.

The query returns the current data of the UART bus trigger.

COMMAND SYNTAX :TRIGger:UART:DATA <data>

<data>:= Value in NR1 format, including an integer and no
decimal point, like 1.

Note:

 The range of the value is related to data length by using the command :TRIGger:UART:DLENgth.

• Use the don't care data (256, data length is 8) to ignore the data value.

QUERY SYNTAX :TRIGger:UART:DATA?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data of the UART bus trigger

to 0x53.

Command message: :TRIGger:UART:DATA 83 TRIG:UART:DATA 83

Query message: TRIG:UART:DATA?

Response message:

83

RELATED COMMANDS :TRIGger:UART:CONDition

:TRIGger:UART:DLENgth

:TRIGger:UART:DLENgth

Command/Query

DESCRIPTION The command sets the data length of the UART bus trigger.

The query returns the current data length of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:DLENgth <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [5, 8].

QUERY SYNTAX :TRIGger:UART:DLENgth?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data length of the UART bus

trigger to 8.

Command message:

:TRIGger:UART:DLENgth 8

TRIG:UART:DLEN 8

Query message: TRIG:UART:DLEN?

Response message:

8

:TRIGger:UART:IDLE

Command/Query

DESCRIPTION The command sets the idle level of the UART bus trigger.

The query returns the current idle level of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:IDLE <idle>

<idle>:= {LOW|HIGH}

QUERY SYNTAX :TRIGger:UART:IDLE?

RESPONSE FORMAT <idle>

<idle>:= {LOW|HIGH}

EXAMPLE The following command sets the idle level of the UART bus

trigger as LOW.

Command message:

:TRIGger:UART:IDLE LOW TRIG:UART:IDLE LOW

Query message: TRIG:UART:IDLE?

Response message:

LOW

:TRIGger:UART:LIMit

Command/Query

DESCRIPTION The command sets the data comparison type of the UART bus

trigger when the trigger condition is Data.

The query returns the current data comparison type of the

UART bus trigger.

COMMAND SYNTAX :TRIGger:UART:LIMit limit_type>

type>:= {EQUal|GREaterthan|LESSthan}

QUERY SYNTAX :TRIGger:UART:LIMit?

RESPONSE FORMAT

limit_type>:= {EQUal|GREaterthan|LESSthan}

EXAMPLE The following command sets the limit of the UART bus trigger

to LESSthan.

Command message:

:TRIGger:UART:LIMit LESSthan

TRIG:UART:LIM LESS

Query message: TRIG:UART:LIM?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:UART:CONDition

:TRIGger:UART:PARity

Command/Query

DESCRIPTION The command sets the parity check of the UART bus trigger.

The query returns the current parity check of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:PARity <parity>

<parity>:= {NONE|ODD|EVEN|MARK|SPACe}

QUERY SYNTAX :TRIGger:UART:PARity?

RESPONSE FORMAT <p

<parity_check>:= {NONE|ODD|EVEN|MARK|SPACe}

EXAMPLE The following command sets the parity check of the UART bus

trigger to odd.

Command message:

:TRIGger:UART:PARity ODD TRIG:UART:PAR ODD

Query message: TRIG:UART:PAR?

Response message:

ODD

:TRIGger:UART:RXSource

Command/Query

DESCRIPTION The command sets the RX source of the UART bus trigger.

The query returns the current RX source of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:RXSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:UART:RXSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command selects the RX source of the UART

bus trigger as channel 2.

Command message:

:TRIGger:UART:RXSource C2

TRIG:UART:RXS C2

Query message: TRIG:UART:RXS?

Response message:

C2

RELATED COMMANDS :TRIGger:UART:

:TRIGger:UART:RXTHreshold

Command/Query

DESCRIPTION The command sets the threshold of RX on UART bus trigger.

The query returns the current threshold of RX on UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:RXTHreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:UART:RXTHreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of RX on UART bus

trigger to 1.5 V.

Command message:

:TRIGger:UART:RXTHreshold 1.50E+00

TRIG:UART:RXTH 1.50E+00

Query message:

TRIG:UART:RXTH?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:UART:RXSource

:TRIGger:UART:STOP

Command/Query

DESCRIPTION The command sets the length of the stop bit on UART bus

trigger.

The query returns the current length of the stop bit on UART

bus trigger.

COMMAND SYNTAX :TRIGger:UART:STOP <bit>

<bit>:= {1|1.5|2}

QUERY SYNTAX :TRIGger:UART:STOP?

RESPONSE FORMAT

<b

 $\text{bit} := \{1|1.5|2\}$

EXAMPLE The following command sets the length of the stop bit on

UART bus trigger to 1 bit.

Command message: :TRIGger:UART:STOP 1
TRIG:UART:STOP 1

Query message: TRIG:UART:STOP?

Response message:

1

:TRIGger:UART:TTYPe

Command/Query

DESCRIPTION The command sets the trigger type of the UART bus trigger.

The query returns the current trigger type of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:TTYPe <trigger_type>

<trigger_type>:= {RX|TX}

QUERY SYNTAX :TRIGger:UART:TTYPe?

RESPONSE FORMAT

<trigger_type>:= {RX|TX}

EXAMPLE The following command sets the trigger type of the UART bus

trigger to RX.

Command message:

:TRIGger:UART:TTYPe RX TRIG:UART:TTYP RX

Query message: TRIG:UART:TTYP?

Response message:

RX

:TRIGger:UART:TXSource

Command/Query

DESCRIPTION The command sets the TX source of the UART bus trigger.

The query returns the current TX source of the UART bus

trigger.

COMMAND SYNTAX :TRIGger:UART:TXSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:UART:TXSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the TX source of the UART bus

trigger as channel 2.

Command message:

:TRIGger:UART:TXSource C2

TRIG:UART:TXS C2

Query message: TRIG:UART:TXS?

Response message:

C2

RELATED COMMANDS :TRIGger:UART:

:TRIGger:UART:TXTHreshold

Command/Query

DESCRIPTION The command sets the threshold of TX on the UART bus

trigger.

The query returns the current threshold of TX on the UART

bus trigger.

COMMAND SYNTAX :TRIGger:UART:TXTHreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below

for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset,4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:UART:TXTHreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of TX on UART bus

trigger to 1.5 V.

Command message:

:TRIGger:UART:TXTHreshold 1.50E+00

TRIG:UART:TXTH 1.50E+00

Query message:

TRIG:UART:TXTH?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:UART:TXSource

:TRIGger:CAN Commands

The :TRIGGER:CAN subsystem commands control the CAN bus trigger parameters.

• :TRIGger:CAN:BAUD

• :TRIGger:CAN:CONDition

• :TRIGger:CAN:DAT2

• :TRIGger:CAN:DATA

• :TRIGger:CAN:ID

• :TRIGger:CAN:IDLength

• :TRIGger:CAN:SOURce

• :TRIGger:CAN:THReshold

:TRIGger:CAN:BAUD

Command/Query

DESCRIPTION The command sets the baud rate of the CAN bus trigger.

The command query returns the baud rate of the CAN bus

trigger.

COMMAND SYNTAX :TRIGger:CAN:BAUD <baud>

<baud>:=

{5kbps|10kbps|20kbps|50kbps|100kbps|125kbps|250kbps|500

kbps|800kbps|1Mbps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [5000,

1000000].

QUERY SYNTAX :TRIGger:CAN:BAUD?

RESPONSE FORMAT

<b

<baud>:=

{5kbps|10kbps|20kbps|50kbps|100kbps|125kbps|250kbps|500

kbps|800kbps|1Mbps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE This command sets the baud rate of the CAN bus trigger to

20kbps.

Command message:

:TRIGger:CAN:BAUD 20kbps TRIG:CAN:BAUD 20kbps

Query message:

TRIG:CAN:BAUD?

Response message:

20kbps

:TRIGger:CAN:CONDition

Command/Query

DESCRIPTION The command sets the trigger condition for the CAN bus

trigger.

The query returns the current trigger condition for the CAN bus

trigger.

COMMAND SYNTAX :TRIGger:CAN:CONDition <condition>

<condition>:= {STARt|REMote|ID|ID AND DATA|ERRor}

QUERY SYNTAX :TRIGger:CAN:CONDition?

RESPONSE FORMAT <condition>

<condition>:= {STARt|REMote|ID|ID_AND_DATA|ERRor}

EXAMPLE The following command sets the trigger condition for the CAN

bus trigger to start.

Command message:

:TRIGger:CAN:CONDition STARt

TRIG:CAN:COND STAR

Query message: TRIG:CAN:COND?

Response message:

STARt

:TRIGger:CAN:DAT2

Command/Query

DESCRIPTION The command sets the data2 of the CAN bus trigger.

The query returns the current data2 of the CAN bus trigger.

COMMAND SYNTAX :TRIGger:CAN:DAT2 <data>

<data>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 256].

Note:

Use the don't care data (256) to ignore the data2 value.

QUERY SYNTAX :TRIGger:CAN:DAT2?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the CAN bus triggered data 2 to

0x49.

Command message: :TRIGger:CAN:DAT2 73
TRIG:CAN:DAT2 73

Query message: TRIG:CAN:DAT2?

Response message:

73

RELATED COMMANDS :TRIGger:CAN:CONDition

:TRIGger:CAN:DATA

Command/Query

DESCRIPTION

The command sets the data of the CAN bus trigger.

The query returns the current data of the CAN bus trigger.

COMMAND SYNTAX :TRIGger:CAN:DATA <data>

<data>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 256].

Note:

Use the don't care data (256) to ignore the data value.

QUERY SYNTAX :TRIGger:CAN:DATA?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data of the CAN bus

triggered to 0x43.

Command message: :TRIGger:CAN:DATA 67
TRIG:CAN:DATA 67

Query message: TRIG:CAN:DATA?

Response message:

6/

RELATED COMMANDS :TRIGger:CAN:CONDition

:TRIGger:CAN:ID

DESCRIPTION

Command/Query

The command sets the ID of the CAN bus trigger.

The query returns the current ID of the CAN bus trigger.

COMMAND SYNTAX

:TRIGger:CAN:ID <id>

<id>:= Value in NR1 format, including an integer and no

decimal point, like 1.

When the ID length is 29 bits, the range of the value is [0, 536870912] where 536870912 represents 0xXXXXXXXX. When the ID length is 11 bits, the range of the value is [0,

2048] where 2048 represents 0xXXXX.

QUERY SYNTAX

:TRIGger:CAN:ID?

RESPONSE FORMAT

<id>

<id>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE

The following command sets the ID of the CAN bus trigger to

0x7819F51.

Command message:

:TRIGger:CAN:ID 125935441 TRIG:CAN:ID 125935441

Query message:

TRIG:CAN:ID?

Response message:

125935441

RELATED COMMANDS

:TRIGger:CAN:CONDition

:TRIGger:CAN:IDLength

Command/Query

DESCRIPTION The command sets the ID length of the CAN bus trigger when

the trigger condition is Remote, ID or ID+Data.

The query returns the current ID length of the CAN bus trigger.

COMMAND SYNTAX :TRIGger:CAN:IDLENgth <id_length>

<id length>:= {11BITS|29BITS}

QUERY SYNTAX :TRIGger:CAN:IDLENgth?

RESPONSE FORMAT <id_length>

<id_length>:= {11BITS|29BITS}

EXAMPLE The following command sets the ID length of the CAN trigger

to 29BITS.

Command message:

:TRIGger:CAN:IDLength 29BITS

TRIG:CAN:IDL 29BITS

Query message: TRIG:CAN:IDL?

Response message:

29BITS

RELATED COMMANDS :TRIGger:CAN:CONDition

:TRIGger:CAN:SOURce

Command/Query

DESCRIPTION The command selects the source of the CAN bus trigger.

The query returns the current source of the CAN bus trigger.

COMMAND SYNTAX :TRIGger:CAN:SOURce <source>

<source>:= $\{C<n>|D<d>\}$

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:CAN:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE This following command sets the source of the CAN bus

trigger to C2.

Command message:

:TRIGger:CAN:SOURce C2 TRIG:CAN:SOUR C2

Query message: TRIG:CAN:SOUR?

Response message:

C2

RELATED COMMANDS :TRIGger:CAN:THReshold

:TRIGger:CAN:THReshold

Command/Query

DESCRIPTION The command sets the threshold of the source on CAN bus

trigger.

The query returns the current threshold of the source on CAN

bus trigger.

COMMAND SYNTAX :TRIGger:CAN:THReshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:CAN:THReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

EXAMPLE The following command sets the threshold of the source on

CAN bus trigger to 1.5 V.

Command message:

:TRIGger:CAN:THReshold 1.50E+00

TRIG:CAN:THR 1.50E+00

Query message:

TRIG:CAN:THR?

Response message:

1.50E+00

DESCRIPTION The command sets the baud rate of the LIN bus trigger.

The query returns the current baud rate of the LIN bus trigger.

COMMAND SYNTAX :TRIGger:LIN:BAUD <baud>

<baud>:=

{600bps|1200bps|2400bps|4800bps|9600bps|19200bps|

CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [300,

20000000].

QUERY SYNTAX :TRIGger:LIN:BAUD?

RESPONSE FORMAT

<b

<baud>:=

{600bps|1200bps|2400bps|4800bps|9600bps|19200bps|

CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the baud rate of the LIN bus

trigger to 9600bps.

Command message:

:TRIGger:LIN:BAUD 9600bps :TRIG:LIN:BAUD 9600bps

Query message:

:TRIG:LIN:BAUD?

Response message:

9600bps

:TRIGger:LIN:CONDition

Command/Query

DESCRIPTION The command sets the trigger condition of the LIN bus.

The query returns the current trigger condition of the LIN bus.

COMMAND SYNTAX :TRIGger:LIN:CONDition <condition>

<condition>:= {BReak|ID|ID_AND_DATA|DATA_ERROR}

QUERY SYNTAX :TRIGger:LIN:CONDition?

RESPONSE FORMAT <condition>

<condition>:= {BReak|ID|ID_AND_DATA|DATA_ERROR}

EXAMPLE The following command sets the condition of the LIN bus

trigger to ID_AND_DATA.

Command message:

:TRIGger:LIN:CONDition ID_AND_DATA

TRIG:LIN:COND ID_AND_DATA

Query message: TRIG:LIN:COND?

Response message:

ID_AND_DATA

:TRIGger:LIN:DAT2 Command/Query

DESCRIPTION The command sets the data2 of the LIN bus trigger when the

trigger condition is ID+Data.

The query returns the current data2 of the LIN bus trigger.

COMMAND SYNTAX :TRIGger:LIN:DAT2 <data>

<data>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 256].

Note:

Use the don't care data (256) to ignore the data2 value.

QUERY SYNTAX :TRIGger:LIN:DAT2?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data2 of the LIN bus trigger

to 0x4C.

Command message: :TRIGger:LIN:DAT2 76

TRIG:LIN:DAT2 76

Query message: TRIG:LIN:DAT2?

Response message:

76

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:DATA

:TRIGger:LIN:DATA Command/Query

DESCRIPTION The command sets the data of the LIN bus trigger when the

trigger condition is ID+Data.

The query returns the current data1 of the LIN bus trigger.

COMMAND SYNTAX :TRIGger:LIN:DATA <data>

<data>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 256].

Note:

Use the don't care data (256) to ignore the data value.

QUERY SYNTAX :TRIGger:LIN:DATA?

RESPONSE FORMAT <data>

<data>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data1 of the LIN bus trigger

to 0x45.

Command message: :TRIGger:LIN:DATA 69
TRIG:LIN:DATA 69

Query message: TRIG:LIN:DATA?

Response message:

69

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:DAT2

:TRIGger:LIN:ERRor:CHECksum

Command/Query

DESCRIPTION The command sets the checksum error state of the LIN bus

trigger when the trigger condition is Error.

The query returns the current checksum error state of the LIN

bus trigger.

COMMAND SYNTAX :TRIGger:LIN:ERRor:CHECksum <state>

<state>:= {0|1}

• 0 means OFF

• 1 means ON

QUERY SYNTAX :TRIGger:LIN:ERRor:CHECksum?

RESPONSE FORMAT <state>

<state>:= {0|1}

EXAMPLE The following command sets to trigger when a checksum error

occurs

Command message:

:TRIGger:LIN:ERRor:CHECksum 1

TRIG:LIN:ERR:CHEC 1

Query message:

TRIG:LIN:ERR:CHEC?

Response message:

7

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:ERRor:DLENgth

Command/Query

DESCRIPTION The command sets the data length of the error frame when the

trigger condition is Error and the checksum error state is on.

The query returns the current data length of the error frame on

LIN bus.

COMMAND SYNTAX :TRIGger:LIN:ERRor:DLENgth <length>

<length>:= Value in NR1 format, including an integer and no

decimal point, like 1. The range of the value is [1, 8].

QUERY SYNTAX :TRIGger:LIN:ERRor:DLENgth?

RESPONSE FORMAT < length>

<length>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data length of the error frame

on LIN bus to 4 bytes.

Command message:

:TRIGger:LIN:ERRor:DLENgth 4

TRIG:LIN:ERR:DLEN 4

Query message:

TRIG:LIN:ERR:DLEN?

Response message:

4

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:ERRor:CHECksum

:TRIGger:LIN:ERRor:ID

Command/Query

DESCRIPTION The command sets the error frame ID of the LIN bus when the

trigger condition is Error and the checksum error state is on.

The query returns the current error frame ID of the LIN bus.

COMMAND SYNTAX :TRIGger:LIN:ERRor:ID <id>

<id>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 63].

QUERY SYNTAX :TRIGger:LIN:ERRor:ID?

RESPONSE FORMAT <id>

<id>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the error frame ID of the LIN bus

trigger to 0x2A.

Command message:

:TRIGger:LIN:ERRor:ID 42 TRIG:LIN:ERR:ID 42

Query message: TRIG:LIN:ERR:ID?

Response message:

42

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:ERRor:CHECksum

:TRIGger:LIN:ERRor:PARity

Command/Query

DESCRIPTION The command sets the header parity error state of the LIN bus

trigger when the trigger condition is Error.

The query returns the header parity error state of the LIN bus

trigger.

COMMAND SYNTAX :TRIGger:LIN:ERRor:PARity <state>

<state>:= {0|1}

• 0 means OFF

• 1 means ON

QUERY SYNTAX :TRIGger:LIN:ERRor:PARity?

RESPONSE FORMAT <state>

<state>:= {0|1}

EXAMPLE The following command sets to trigger when a header parity

error occurs.

Command message:

:TRIGger:LIN:ERRor:PARity 1

TRIG:LIN:ERR:PAR 1

Query message: TRIG:LIN:ERR:PAR?

Response message:

1

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:ERRor:SYNC

Command/Query

DESCRIPTION The command sets the sync byte error state of the LIN bus

trigger.

The query returns the current sync byte error state of the LIN

bus trigger.

COMMAND SYNTAX :TRIGger:LIN:ERRor:SYNC <state>

<state>:= {0|1}

QUERY SYNTAX :TRIGger:LIN:ERRor:SYNC?

RESPONSE FORMAT <state>

<state>:= {0|1}

EXAMPLE The following command sets to trigger when a sync byte error

occurs.

Command message:

:TRIGger:LIN:ERRor:SYNC 1 TRIG:LIN:ERR:SYNC 1

Query message:

TRIG:LIN:ERR:SYNC?

Response message:

1

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:ID

Command/Query

DESCRIPTION The command sets the ID of the LIN bus when the trigger

condition is ID.

The query returns the current ID of the LIN bus trigger.

COMMAND SYNTAX :TRIGger:LIN:ID <id>

<id>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 64].

Note:

Use the don't care data (64) to ignore the ID value.

QUERY SYNTAX :TRIGger:LIN:ID?

RESPONSE FORMAT <id>

<id>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the ID of the LIN bus trigger to

0x2B.

Command message: :TRIGger:LIN:ID 43

TRIG:LIN:ID 43

Query message: TRIG:LIN:ID?

Response message:

43

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:SOURce

Command/Query

DESCRIPTION The command selects the trigger source of the LIN bus.

The query returns the current trigger source of the LIN bus.

COMMAND SYNTAX :TRIGger:LIN:Source <source>

<source>:= $\{C<n>|D<d>\}$

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:LIN:Source?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the trigger source of the LIN bus

as channel 2.

Command message:

:TRIGger:LIN:SOURce C2

TRIG:LIN:SOUR C2

Query message:

TRIG:LIN:SOUR?

Response message:

C2

RELATED COMMANDS :TRIGger:LIN:THReshold

:TRIGger:LIN:STANdard

Command/Query

DESCRIPTION The command sets the LIN protocol standard when the trigger

condition is Error and the checksum error state is on.

The query returns the current protocol standard of the LIN bus.

COMMAND SYNTAX :TRIGger:LIN:STANdard <version>

QUERY SYNTAX :TRIGger:LIN:STANdard?

RESPONSE FORMAT <version>

<version>:= {0|1}

EXAMPLE The following command sets to trigger when a checksum error

occurs according to Lin protocol 1.3.

Command message: :TRIGger:LIN:STANdard 0

TRIG:LIN:STAN 0

Query message: TRIG:LIN:STAN?

Response message:

0

RELATED COMMANDS :TRIGger:LIN:CONDition

:TRIGger:LIN:ERRor:CHECksum

:TRIGger:LIN:THReshold

Command/Query

DESCRIPTION The command sets the threshold of the source on LIN bus

trigger.

The query returns the current threshold of source on the LIN

bus trigger.

COMMAND SYNTAX :TRIGger:LIN:THReshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below

for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	
SDS6000A	[-4.5*vertical_scale-vertical_offset,
SDS6000L	4.5*vertical_scale-vertical_offset]
SHS800X/SHS1000X	
SDS5000X	
SDS3000X HD	
SDS2000X Plus	[-4.1*vertical_scale-vertical_offset,
SDS2000X HD	4.1*vertical_scale-vertical_offset]
SDS1000X HD	
SDS800X HD	

QUERY SYNTAX :TRIGger:LIN:THReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the source on

LIN bus trigger to 1.5 V.

Command message:

:TRIGger:LIN:THReshold 1.50E+00

TRIG:LIN:THR 1.50E+00

Query message: TRIG:LIN:THR?

TRIG.LIN.TTIR!

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:LIN:SOURce

- :TRIGger:FLEXray:THReshold

:TRIGger:FLEXray:BAUD

Command/Query

DESCRIPTION The command sets the baud rate of the Flexray bus trigger.

The query returns the current baud rate of the Flexray bus

trigger.

COMMAND SYNTAX :TRIGger:FLEXray:BAUD <baud>

<baud>:= {2500kbps|5Mbps|10Mbps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [1000000,

20000000].

QUERY SYNTAX :TRIGger:FLEXray:BAUD?

RESPONSE FORMAT

<b

<baud>:= {2500kbps|5Mbps|10Mbps|CUSTom[,<value>]}

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the baud rate of the Flexray bus

trigger to 2500kbps.

Command message:

:TRIGger:FLEXray:BAUD 2500kbps

TRIG:FLEX:BAUD 2500kbps

Query message: TRIG:FLEX:BAUD?

Response message:

2500kbps

:TRIGger:FLEXray:CONDition

Command/Query

DESCRIPTION The command sets the trigger condition of FLEXray bus.

The query returns the current trigger condition of FLEXray bus.

COMMAND SYNTAX :TRIGger:FLEXray:CONDition <condition>

<condition>:= {TSS|FRAMe|SYMBol|ERRor}

QUERY SYNTAX :TRIGger:FLEXray:CONDition?

RESPONSE FORMAT <condition>

<condition>:= {TSS|FRAMe|SYMBol|ERRor}

EXAMPLE The following command sets the condition of FLEXray bus

trigger to SYMBol.

Command message:

:TRIGger:FLEXray:CONDition SYMBol

TRIG:FLEX:COND SYMB

Query message: TRIG:FLEX:COND?

Response message:

SYMBol

:TRIGger:FLEXray:FRAMe:COMPare

Command/Query

DESCRIPTION The command sets the frame cycle compare type of FLEXray

bus trigger.

The query returns the current frame cycle compare type of

FLEXray bus trigger.

COMMAND SYNTAX :TRIGger:FLEXray:FRAMe:COMPare <type>

<type >:= {ANY|EQUal|GREaterthan|LESSthan}

QUERY SYNTAX :TRIGger:FLEXray:FRAMe:COMPare?

RESPONSE FORMAT <type >

<type >:= {ANY|EQUal|GREaterthan|LESSthan}

EXAMPLE The following command sets the frame cycle compare type of

FLEXray bus trigger to LESSthan.

Command message:

:TRIGger:FLEXray:FRAMe:COMPare LESSthan

TRIG:FLEX:FRAM:COMP LESS

Query message:

TRIG:FLEX:FRAM:COMP?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:FLEXray:CONDition

:TRIGger:FLEXray:FRAMe:CYCLe

Command/Query

DESCRIPTION The command sets the frame cycle of FLEXray bus trigger.

The query returns the current frame cycle of FLEXray bus

trigger.

COMMAND SYNTAX :TRIGger:FLEXray:FRAMe:CYCLe <cycle>

<cycle>:= Value in NR1 format, including an integer and no decimal point, like 1. The range of the value is [0, 63].

QUERY SYNTAX :TRIGger:FLEXray:FRAMe:CYCLe?

RESPONSE FORMAT <cycle>

<cycle>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the frame cycle of FLEXray bus

trigger to 2.

Command message:

:TRIGger:FLEXray:FRAMe:CYCLe 2

TRIG:FLEX:FRAM:CYCL 2

Query message:

TRIG:FLEX:FRAM:CYCL?

Response message:

DESCRIPTION The command sets the ID length of the CAN FD bus trigger.

The query returns the current ID length of the CAN FD bus

trigger.

COMMAND SYNTAX :TRIGger:CANFd:IDLENgth <length>

<length>:= {11BITS|29BITS}

QUERY SYNTAX :TRIGger:CANFd:IDLENgth?

RESPONSE FORMAT <length>

<length>:= {11BITS|29BITS}

EXAMPLE The following command sets the ID length of the CAN FD bus

trigger to 29BITS.

Command message:

:TRIGger:CANFd:IDLength 29BITS

TRIG:CANF:IDL 29BITS

Query message: TRIG:CANF:IDL?

Response message:

29BITS

RELATED COMMANDS :TRIGger:CANFd:CONDition

:TRIGger:CANFd:ID

:TRIGger:CANFd:SOURce

Command/Query

DESCRIPTION The command selects the source of the CAN FD bus trigger.

The query returns the current source of the CAN FD bus

trigger.

COMMAND SYNTAX :TRIGger:CANFd:SOURce <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:CANFd:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the source of the CAN FD bus

trigger as channel 2.

Command message:

:TRIGger:CANFd:SOURce C2

TRIG:CANF:SOUR C2

Query message: TRIG:CANF:SOUR?

Response message:

C2

RELATED COMMANDS :TRIGger:CANFd:THReshold

:TRIGger:CANFd:THReshold

Command/Query

DESCRIPTION The command sets the threshold of the source on CAN FD

bus triggering.

The query returns the current threshold of the source on CAN

FD bus triggering.

COMMAND SYNTAX :TRIGger:CANFd:THReshold <threshold>

<threshold>:= Value in NR3 format, including a decimal point

and exponent, like 1.23E+2.

The range of the value varies by model, see the table below

for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X Plus SDS2000X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:CANFd:THReshold?

RESPONSE FORMAT <threshold>

<threshold>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the source on

CAN FD bus trigger to 1.5 V.

Command message:

:TRIGger:CANFd:THReshold 1.50E+00

TRIG:CANF:THR 1.50E+00

Query message: TRIG:CANF:THR?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:CANFd:SOURce

:TRIGger:IIS Commands [Option]

The :TRIGGER:IIS subsystem commands control the IIS bus trigger parameters.

- :TRIGger:IIS:AVARiant
- :TRIGger:IIS:BCLKSource
- :TRIGger:IIS:BCLKThreshold
- :TRIGger:IIS:BITorder
- :TRIGger:IIS:CHANnel
- :TRIGger:IIS:COMPare

- :TRIGger:IIS:WSTHreshold

:TRIGger:IIS:AVARiant

Command/Query

DESCRIPTION The command sets the audio variant of the IIS bus trigger.

The query returns the current audio variant of the IIS bus

trigger.

COMMAND SYNTAX :TRIGger:IIS:AVARiant <type>

<type>:= {I2S|LJ|RJ}

QUERY SYNTAX :TRIGger:IIS:AVARiant?

RESPONSE FORMAT <type>

<type>:= {I2S|LJ|RJ}

EXAMPLE The following command sets the audio variant of the IIS bus

trigger to IIS.

Command message:

:TRIGger:IIS:AVARiant I2S

TRIG:IIS:AVAR 12S

Query message: TRIG:IIS:AVAR?

Response message:

12S

:TRIGger:IIS:BCLKSource

Command/Query

DESCRIPTION The command selects the BCLK source of the IIS bus trigger.

The query returns the current BCLK source of the IIS bus

trigger.

COMMAND SYNTAX :TRIGger:IIS:BCLKSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:IIS:BCLKSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the BCLK source of the IIS bus

trigger as channel 2.

Command message:

:TRIGger:IIS:BCLKSource C2

TRIG:IIS:BCLKS C2

Query message: TRIG:IIS:BCLKS?

Response message:

C2

RELATED COMMANDS :TRIGger:IIS:BCLKThreshold

:TRIGger:IIS:BCLKThreshold

Command/Query

DESCRIPTION The command sets the threshold of the BCLK on LIN bus

trigger.

The query returns the current threshold of the BCLK on LIN

bus trigger.

COMMAND SYNTAX :TRIGger:IIS:BCLKThreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below

for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X Plus SDS2000X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:IIS:BCLKThreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the BCLK on LIN

bus trigger to 1.5 V.

Command message:

:TRIGger:IIS:BCLKThreshold 1.50E+00

TRIG:IIS:BCLKT 1.50+00

Query message:

TRIG:IIS:BCLKT?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:IIS:BCLKSource

:TRIGger:IIS:BITorder

Command/Query

DESCRIPTION The command sets the bit order of the IIS bus trigger.

The query returns the current bit order of the IIS bus trigger.

COMMAND SYNTAX :TRIGger:IIS:BITorder <order>

<order>:= {LSM|MSB}

QUERY SYNTAX :TRIGger:IIS:BITorder?

RESPONSE FORMAT <order>

<order>:= {LSM|MSB}

EXAMPLE The following command sets the bit order of the IIS bus trigger

to MSB.

Command message:

:TRIGger:IIS:BITorder MSB

TRIG:IIS:BIT MSB

Query message:

TRIG:IIS:BIT?

Response message:

MSB

:TRIGger:IIS:CHANnel

Command/Query

DESCRIPTION The command sets the channel of the IIS bus trigger.

The query returns the current channel of the IIS bus trigger

COMMAND SYNTAX :TRIGger:IIS:CHANnel <channel>

<channel>:= {LEFT|RIGHT}

QUERY SYNTAX :TRIGger:IIS:CHANnel?

RESPONSE FORMAT <channel>

<channel>:= {LEFT|RIGHT}

EXAMPLE The following command sets to trigger on right channel of the

IIS bus.

Command message:

:TRIGger:IIS:CHANnel RIGHT TRIG:IIS:CHAN RIGHT

Query message: TRIG:IIS:CHAN?

Response message:

RIGHT

:TRIGger:IIS:COMPare

Command/Query

DESCRIPTION The command sets the data compare type of the IIS bus

trigger.

The query returns the current data compare type of the IIS bus

trigger.

COMMAND SYNTAX :TRIGger:IIS:COMPare <type>

<type>:= {EQUal|GREaterthan|LESSthan}

QUERY SYNTAX :TRIGger:IIS:COMPare?

RESPONSE FORMAT <type>

<type>:= {EQUal|GREaterthan|LESSthan}

EXAMPLE The following command sets the data compare type of the IIS

bus trigger to LESSthan.

Command message:

:TRIGger:IIS:COMPare LESSthan

TRIG:IIS:COMP LESS

Query message: TRIG:IIS:COMP?

Response message:

LESSthan

RELATED COMMANDS :TRIGger:IIS:CONDition

:TRIGger:IIS:CONDition

Command/Query

DESCRIPTION The command sets the trigger condition of the IIS bus.

The query returns the current trigger condition of the IIS bus.

COMMAND SYNTAX :TRIGger:IIS:CONDition <condition>

<condition>:= {DATA|MUTE|CLIP|GLITch|RISing|FALLing}

QUERY SYNTAX :TRIGger:IIS:CONDition?

RESPONSE FORMAT <condition>

<condition>:= {DATA|MUTE|CLIP|GLITch|RISing|FALLing}

EXAMPLE The following command sets the trigger condition of the IIS

bus to DATA.

Command message:

:TRIGger:IIS:CONDition DATA

TRIG:IIS:COND DATA

Query message: TRIG:IIS:COND?

Response message:

DATA

:TRIGger:IIS:DLENgth

Command/Query

DESCRIPTION The command sets the data bits of the IIS bus trigger.

The query returns the current data bits of the IIS bus trigger.

COMMAND SYNTAX :TRIGger:IIS:DLENgth <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

Note:

The range of the value is related to the channel bits and the start bits. If the channel bits are 32 and the start bit is 2, the

range is [1,30]

QUERY SYNTAX :TRIGger:IIS:DLENgth?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the data bits of the IIS bus trigger

to 10.

Command message:

:TRIGger:IIS:DLENgth 10

TRIG:IIS:DLEN 10

Query message:

TRIG:IIS:DLEN?

Response message:

10

:TRIGger:IIS:DSource

Command/Query

DESCRIPTION The command selects the data source of the IIS bus trigger.

The query returns the current data source of the IIS bus trigger

COMMAND SYNTAX :TRIGger:IIS:DSource <source>

<source>:= {C<n>|D<d>}

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:IIS:DSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the data source of the IIS bus

trigger as C2.

Command message:

:TRIGger:IIS:DSource C2

TRIG:IIS:DS C2

Query message:

TRIG:IIS:DS?

Response message:

C2

RELATED COMMANDS :TRIGger:IIS:DTHReshold

:TRIGger:IIS:DTHReshold

Command/Query

DESCRIPTION The command sets the threshold of the data source on IIS bus

trigger.

The query returns the current threshold of the data source on

IIS bus trigger.

COMMAND SYNTAX :TRIGger:IIS:DTHReshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X Plus SDS2000X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:IIS:DTHReshold?

RESPONSE FORMAT <a href="https://www.ncbi.nlm.nc

EXAMPLE The following command sets the threshold of the data source

on IIS bus trigger to 1.5 V.

Command message:

TRIGger:IIS:DTHReshold 1.50E+00

TRIG:IIS:DTHR 1.50E+00

Query message:

TRIG:IIS:DTHR?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:IIS:DSource

:TRIGger:IIS:LATChedge

Command/Query

DESCRIPTION The command selects the sampling edge of BCLK on IIS bus

trigger.

The query returns the sampling edge of BCLK on IIS bus

trigger

COMMAND SYNTAX :TRIGger:IIS:LATChedge <slope>

<slope>:= {RISing|FALLing}

QUERY SYNTAX :TRIGger:IIS:LATChedge?

RESPONSE FORMAT <slope>

<slope>:= {RISing|FALLing}

EXAMPLE The following command sets the sampling edge of BCLK on

IIS bus trigger to RISing.

Command message:

:TRIGger:IIS:LATChedge RISing

TRIG:IIS:LATC RIS

Query message: TRIG:IIS:LATC?

Response message:

RISing

:TRIGger:IIS:LCH Command/Query

DESCRIPTION The command selects the level of the left channel on IIS bus

trigger.

The query returns the current level of the left channel on IIS

bus trigger.

COMMAND SYNTAX :TRIGger:IIS:LCH <level>

<level>:= {LOW|HIGH}

QUERY SYNTAX :TRIGger:IIS:LCH?

RESPONSE FORMAT < level>

<level>:= {LOW|HIGH}

EXAMPLE The following command sets the level of the left channel on IIS

bus trigger to HIGH.

Command message: :TRIGger:IIS:LCH HIGH TRIG:IIS:LCH HIGH

Query message: TRIG:IIS:LCH?

Response message:

HIGH

:TRIGger:IIS:VALue Command/Query

DESCRIPTION The command sets the value of the IIS bus trigger.

The query returns the current value of the IIS bus trigger.

COMMAND SYNTAX :TRIGger:IIS:VALue <value>

<value>:= Value in NR1 format, including an integer and no
decimal point, like 1.

Note:

 The range of the value is related to data length by using the command :TRIGger:IIS:DLENgth.

 Use the don't care data (256, data length is 8) to ignore the data value.

QUERY SYNTAX :TRIGger:IIS:VALue?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the value of the IIS bus trigger to

0x56 when the data length is 8.

Command message: :TRIGger:IIS:VALue 86

TRIG:IIS:VAL 86

Query message: TRIG:IIS:VAL?

Response message:

86

RELATED COMMANDS :TRIGger:IIS:CONDition

:TRIGger:IIS:DLENgth

:TRIGger:IIS:WSSource

Command/Query

DESCRIPTION The command selects the WS source of the IIS bus trigger.

The query returns the current WS source of the IIS bus trigger.

COMMAND SYNTAX :TRIGger:IIS:WSSource <source>

<source>:= $\{C<n>|D<d>\}$

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:IIS:WSSource?

RESPONSE FORMAT <source>

<source>:= {C<n>|D<d>}

EXAMPLE The following command sets the WS source of the IIS bus

trigger as channel 2.

Command message:

:TRIGger:IIS:WSSource C2

TRIG:IIS:WSS C2

Query message:

TRIG:IIS:WSS?

Response message:

C2

RELATED COMMANDS :TRIGger:IIS:WSTHreshold

:TRIGger:IIS:WSTHreshold

Command/Query

DESCRIPTION The command sets the threshold of the WS on IIS bus trigger.

The query returns the current threshold of the WS on IIS bus

trigger.

COMMAND SYNTAX :TRIGger:IIS:WSTHreshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro	[-4.5*vertical scale-vertical offset,
SDS6000A	4.5*vertical scale-vertical offset
SDS6000L	4.5 Vertical_scale-vertical_offset[
SDS5000X	
SDS3000X HD	[-4.1*vertical_scale-vertical_offset,
SDS2000X Plus	4.1*vertical_scale-vertical_offset]
SDS2000X HD	

QUERY SYNTAX :TRIGger:IIS:WSTHreshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the WS on IIS

bus trigger to 1.5 V.

Command message:

:TRIGger:IIS:WSTHreshold 1.50E+00

TRIG:IIS:WSTH 1.50E+00

Query message:

TRIG:IIS:WSTH?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:IIS:WSSource

:TRIGger:SENT Commands [Option]

The :TRIGGER:SENT subsystem commands control the SENT bus trigger parameters.

• :TRIGger:SENT:SOURce

• :TRIGger:SENT:THReshold

:TRIGger:SENT:SOURce

Command/Query

DESCRIPTION The command selects the source of the SENT bus trigger.

The query returns the current source of the SENT bus trigger.

COMMAND SYNTAX :TRIGger:SENT:Source <source>

<source>:= $\{C<n>|D<d>\}$

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :TRIGger:SENT:Source?

RESPONSE FORMAT <source>

<source>:= $\{C<n>|D<d>\}$

EXAMPLE The following command sets the source of the SENT bus

trigger as channel 2.

Command message:

:TRIGger:SENT:SOURce C2

TRIG:SENT:SOUR C2

Query message:

TRIG:SENT:SOUR?

Response message:

Command/Query

DESCRIPTION The command sets the threshold of the source on SENT bus

trigger.

The query returns the current threshold of the source on SENT

bus trigger.

COMMAND SYNTAX :TRIGger:SENT:THReshold <value>

<value>:= Value in NR3 format, including a decimal point and

exponent, like 1.23E+2.

The range of the value varies by model, see the table below

for details.

Model	Value Range
SDS7000A	[-4.26*vertical_scale-vertical_offset, 4.26*vertical_scale-vertical_offset]
SDS6000 Pro SDS6000A SDS6000L	[-4.5*vertical_scale-vertical_offset, 4.5*vertical_scale-vertical_offset]
SDS5000X SDS3000X HD SDS2000X Plus SDS2000X HD	[-4.1*vertical_scale-vertical_offset, 4.1*vertical_scale-vertical_offset]

QUERY SYNTAX :TRIGger:SENT:THReshold?

RESPONSE FORMAT <value>

<value>:= Value in NR3 format.

EXAMPLE The following command sets the threshold of the source on

FLEXray bus trigger to 1.5 V.

Command message:

:TRIGger:SENT:THReshold 1.50E+00

TRIG:SENT:THR 1.50E+00

Query message:

TRIG:SENT:THR?

Response message:

1.50E+00

RELATED COMMANDS :TRIGger:SENT:Source

WAVeform Commands

The WAVEFORM subsystem is used to transfer data to a controller from the oscilloscope waveform memory.

The waveform record is actually contained in two portions: the preamble and waveform data. The waveform record must be read from the oscilloscope by the controller using two separate commands. The waveform data is the actual data acquired for each point in the specified source. The preamble contains the information for interpreting the waveform data.

:WAVeform:BYTeorder

:WAVeform:STARt

:WAVeform:INTerval

:WAVeform:MAXPoint

:WAVeform:POINt

:WAVeform:PREamble

:WAVeform:SEQuence

:WAVeform:SOURce

:WAVeform:STARt

:WAVeform:WIDTh

:WAVeform:BYTeorder

Command/Query

DESCRIPTION The command sets the byte order of transmitted waveform

data words. When waveform data is transmitted in 16 bits,

byte order needs to be set, defaulting to LSB.

The query returns the transmission order of waveform data.

COMMAND SYNTAX :WAVeform:BYTeorder <order>

<order>:= {MSB|LSB}

QUERY SYNTAX :WAVeform:BYTeorder?

RESPONSE FORMAT <order>

<order>:= {MSB|LSB}

EXAMPLE The following command sets the byte order of data words

transmitted by the oscilloscope to MSB

Command message:

:WAVeform:BYTeorder MSB

WAV:BYT MSB

Query message: *WAV:BYT?*

Response message:

MSB

RELATED COMMANDS :WAVeform:WIDTh

:WAVeform:SOURce

Command/Query

DESCRIPTION The command specifies the source waveform to be transferred

from the oscilloscope using the query :WAVeform:DATA?

The query returns the source waveform to be transferred from

the oscilloscope.

COMMAND SYNTAX :WAVeform:SOURce <source>

<source>:= {C<n>|F<x>|D<d>}

- C denotes an analog channel.
- F denotes a math function.
- D denotes a digital channel.

<n>:= 1 to (# analog channels) in NR1 format, including an

integer and no decimal point, like 1.

<x>:= 1 to (# math functions) in NR1 format, including an

integer and no decimal point, like 1.

<d>:= 0 to (# digital channels - 1) in NR1 format, including an

integer and no decimal point, like 1.

QUERY SYNTAX :WAVeform:SOURce?

RESPONSE FORMAT <source>

<source>:= {C<n>|F<x>|D<d>}

EXAMPLE The following command specifies that the Channel 2 waveform

will be transferred in the next :WAVeform:DATA? query

or :WAVeform:PREamble? query.

Command message:

:WAVeform:SOURce C2

WAV:SOUR C2

Query message:

WAV:SOUR?

Response message:

C2

RELATED COMMANDS :WAVeform:DATA

:WAVeform:PREamble

:WAVeform:STARt

Command/Query

DESCRIPTION The command specifies the starting data point for waveform

transfer using the query :WAVeform:DATA?.

The query returns the starting data point for waveform transfer.

COMMAND SYNTAX :WAVeform:STARt <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

Note:

The value range is related to the current waveform point and

the value set by the command :WAVeform:POINt.

QUERY SYNTAX :WAVeform:STARt?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the start point to 1000 when the

current waveform point is 400 kpts.

Command message:

:WAVeform:STARt 1000

WAV:STAR 1000

Query message:

WAV:STAR?

Response message:

1000

RELATED COMMANDS :WAVeform:POINt

:WAVeform:INTerval

Command/Query

DESCRIPTION The command sets the interval between data points for

waveform transfer using the query :WAVeform:DATA?

The query returns the interval between data points for

waveform transfer.

COMMAND SYNTAX :WAVeform:INTerval <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

Note:

The value range is related to the values set by the command: WAVeform: POINt and: WAVeform: STARt.

QUERY SYNTAX :WAVeform:INTerval?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command sets the interval between data points

for waveform transfer to 200.

Command message:

:WAVeform:INTerval 200

WAV:INT 200

Query message:

WAV:INT?

Response message:

200

RELATED COMMANDS :WAVeform:STARt

:WAVeform:POINt

:WAVeform:POINt

Command/Query

DESCRIPTION The command sets the number of waveform points to be

transferred with the query :WAVeform:DATA?

The query returns the number of waveform points to be

transferred.

COMMAND SYNTAX :WAVeform:POINt <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

Note:

The value range is related to the current waveform point.

QUERY SYNTAX :WAVeform:POINt?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following command the number of waveform points to be

transferred to 2000 pts.

Command message:

:WAVeform:POINt 20000

WAV:POIN 20000

Query message:

WAV:POIN?

Response message:

20000

RELATED COMMANDS :ACQuire:POINts

:WAVeform:MAXPoint

Query

DESCRIPTION The query returns the maximum points of one piece, when it

needs to read the waveform data in pieces.

QUERY SYNTAX :WAVeform:MAXPoint?

RESPONSE FORMAT <value>

<value>:= Value in NR1 format, including an integer and no

decimal point, like 1.

EXAMPLE The following return the maximum points of one piece in

SDS2000X Plus series.

Query message: :WAV:MAXP?

Response message:

10000000

:WAVeform:WIDTh

Command/Query

DESCRIPTION The command sets the current output format for the transfer of

waveform data.

The query returns the current output format for the transfer of

waveform data.

COMMAND SYNTAX :WAVeform:WIDTh <type>

<type>:= {BYTE|WORD}

WORD formatted data transfers 16-bit data as two bytes, and

transmission in LSB format

BYTE formatted data is transferred as 8-bit bytes.

Note:

When the vertical resolution is set to 10 bit or the ADC bit is more than 8bit, it must to use the command to set to WORD

before transferring waveform data.

QUERY SYNTAX :WAVeform:WIDTh?

RESPONSE FORMAT <type>

<type>:= {BYTE|WORD}

EXAMPLE The following command sets the current output format for the

transfer of waveform data to BYTE.

Command message:

:WAVeform:WIDTh BYTE

WAV:WIDT BYTE

Query message:

WAV:WIDT?

Response message:

BYTE

:WAVeform:PREamble

Query

DESCRIPTION The query returns the parameters of the source using by the

command: WAVeform: SOURce.

QUERY SYNTAX :WAVeform:PREamble?

RESPONSE FORMAT

<b

<bin>:= binary data block headed "#9<9-Digits>". See the

table below for details.

RELATED COMMANDS :WAVeform:SOURce

Table 1 Explanation of the descriptor block

(The first byte after "#9<9-digits>" is the starting position)

Addres s	Туре	Length	Description
0~15	char	16	Descriptor name. It is string, the first 8 chars are always "WAVEDESC"
16~31	char	16	Template name. It is string, the first 7 chars are always "WAVEACE".
32~33	short	2	COMM_TYPE. It is chosen by remote command comm_format. 0 - byte, 1- word. Default value is 0.
34~35	short	2	COMM_ORDER. It is chosen by remote command comm_format. 0 - LSB, 1- MSB. Default value is 0.
36~39	long	4	wave_desc_length. Length in bytes of block WAVEDESC. (346)
40~59	long	4*5	Reserved
60~63	long	4	WAVE_ARRAY_1. Length in bytes of 1st simple data array. In transmitted waveform, represent the number of transmitted bytes in accordance with the parameter of the :WAVeform:WIDTh remote command and the used format (see COMM_TYPE). Only for analog channel.
64~75	long	4*3	Reserved
76~91	char	16	Instrument name. It is string, always "Siglent SDS".
92~95	long	4	Reserved
96~111	char	16	Reserved
112~115	long	4	Reserved
116~119	long	4	Wave array count. Number of data points in the data array. Only for analog channel. When sequence is on, this value means the points number of single sequence frame.
120~131	long	4*3	Reserved
132~135	long	4	First point. Indicates the offset relative to the beginning of the trace buffer. Value is the same as the parameter of the :WAVeform:STARt remote command.
136~139	long	4	Data interval. Indicates the interval between data points for waveform transfer. Value is the same as the parameter of the :WAVeform:INTerval remote command.
140~143	long	4	Reserved

144~147	long	4	read_frames, number of sequence frames transferred this time. Used to calculate the reading times of sequence waveform
148~151	long	4	sum_frames, number of sequence frames acquired. Used to calculate the reading times of sequence waveform
152~155	short	2*2	Reserved
156~159	float	4	Vertical gain. The value of vertical scale without probe attenuation.
160~163	float	4	Vertical offset. The value of vertical offset without probe attenuation.
164~167	float	4	code_per_div. The value is different for different vertical gain of different models
168~171	float	4	Reserved
172~173	short	2	Adc_bit
174~175	short	2	The specified frame index of sequence set by the parameter <value1> of the command :WAVeform:SEQuence. Default Value is 1</value1>
176~179	float	4	Horizontal interval. Sampling interval for time domain waveforms. Horizontal interval = 1/sampling rate.
180~187	long double	8	Horizontal offset. Trigger offset for the first sweep of the trigger, seconds between the trigger and the first data point. Unit is s.
188~195	long double	8	Reserved
196~243	char	48	Reserved
244~291	char	48	Reserved
292~295	float	4	Reserved
296~311	struct	16	Reserved
312~315	float	4	Reserved
316~323	short	2*4	Reserved
324~325	short	2	Time_base. This is the enumerated time/div. see the Table 2 for details.
326~327	short	2	Vertical coupling. 0-DC,1-AC,2-GND
328~331	float	4	Probe attenuation.
332~333	short	2	Fixed vertical gain. This is the enumerated vertical scale. This value is not intuitive, and the vertical scale is usually represented by the value of address 156~159
334~335	short	2	Bandwidth limit. 0-OFF,1-20M,2-200M
336~343	float	4*2	Reserved
344~345	short	2	Wave source. 0-C1,1-C2,2-C3,3-C4,4-C5,5-C6,6-C7,7-C8

Table 2 Enum of Timebase

Index	Timebase (s)	Index	Timebase(s)
0	200E-12	20	1E-3
1	500E-12	21	2E-3
2	1E-9	22	5E-3
3	2E-9	23	10E-3
4	5E-9	24	20E-3
5	10E-9	25	50E-3
6	20E-9	26	100E-3
7	50E-9	27	200E-3
8	100E-9	28	500E-3
9	200E-0	29	1
10	500E-9	30	2
11	1E-6	31	5
12	2E-6	32	10
13	5E-6	33	20
14	10E-6	34	50
15	20E-6	35	100
16	50E-6	36	200
17	100E-6	37	500
18	200E-6	38	1000
19	500E-6		

Note: Different models have different time base enumeration

:WAVeform:DATA

Query

DESCRIPTION The query returns the waveform data of the source using by

the command :WAVeform:SOURce to be transferred from the

oscilloscope.

QUERY SYNTAX :WAVeform:DATA?

RESPONSE FORMAT <wave_data>

<wave data>:=binary data block headed "#N<N-Digits>"

RELATED COMMANDS :WAVeform:STARt

:WAVeform:INTerval :WAVeform:POINt :WAVeform:MAXPoint :WAVeform:WIDTh

EXAMPLE For SDS5000X series, the following steps show how to use

the command to reconstitute the display of waveform.

For analog channel waveform and math waveform (except for FFT):

Step 1: Send the commands to get the data of waveform.

Command message:

:WAVeform:SOURce C2

:WAVeform:DATA?

Response message:

The header is "#9000001000" which nine ASCII integers are used to give the number of the waveform data points (1000 pts). After the header of block, is beginning of the wave data, and the last two bytes "0A 0A" means the end of data.

Data			Description
23 39 30 30 3	0 30 30 31 30 30 30 F5 F	6 F6 F6 F6 F7 F7 F8	#9000001000
F8 F9 F9 F9 F	A FA FB FB FB FC FC FC F	D FE FF FF 00 01 01	
02 02 03 03 0	4 05 06 06 06 07 08 09 0	9 0A 0A 0B 0B 0C 0D	
OD OE OF OF 1) 11 12 13 14 14 15 15 1	6 17 18 19 1A 1B 1B	
1B 1C 1C 1E 1	F 1F 20 21 22 22 23 24 2	5 ED ED ED ED	
ED ED ED ED E	D ED ED ED ED EE EE E	E ED ED ED EE EE EF	
EF EF EE EE E	F EF F0 F0 F0 F1 F1 F1 F	1 F1 F2 F2 F3 F3 F3	\n\n
F3 F3 F4 F4 0	A OA		

Step 2: Send the query to get the parameters of waveform.

Query message:

:WAVeform:PRE?

For parameter parsing, see the section of the query. Through the query, we can get the vertical scale is 10 V/div, the vertical offset is 14.5 V, the timebase is 20E-9 s, the trigger delay is 1.72E-8 s, and the sampling interval is 2E-10 s.

Step 3: Calculate the voltage value corresponding to the data point.

Using the formula: voltage value (V) = code value *(vdiv /code per div) - voffset.

Parameter	Description	Example above
code value	Signed number of wave data. If the vertical resolution of the model is greater than 8bit, the code value is a word in LSB byte order by the command :WAVeform:WIDTh. The data is left aligned, and the lower bit is zero filled.	The first point is the 17th data "F5", convert to decimal is "-11"
	For SDS6000 Pro, 12bit data is used for 12bit and 10bit models, but the ADC range is different.	
vdiv	The vertical scale. It is the value with address 156~159 in the data block returned by the :WAVeform:PREamble?	10
voffset	The vertical position value. It is the value with address 160~163 in the data block returned by the :WAVeform:PREamble?	14.5
code_per_div	Code value per division in vertical direction. It is the value with address 164~167 in the data block returned by the :WAVeform:PREamble?	30

The picture above as an example:

The first point: voltage value = -11*(10/30)-(14.5) = -18.167 V.

Step 4: Calculate the time value of the data point.

Using the formula: time value(S) = delay-(timebase*grid/2)+index*interval

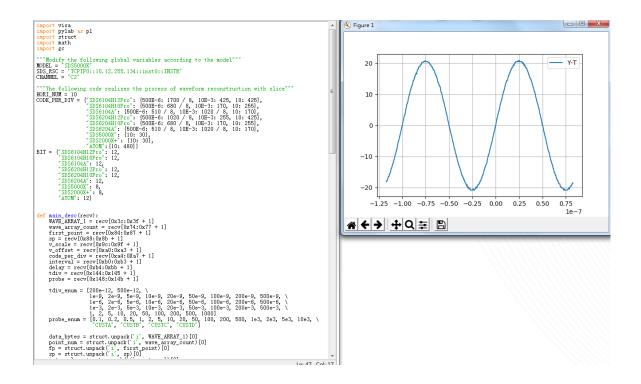

Parameter	Description	Example above
timebase	The horizontal scale. It is the value with address 324~325 in the data block returned by the :WAVeform:PREamble?	2E-8
delay	The horizontal position value. It is the value with address 180~187 in the data block returned by the :WAVeform:PREamble?	1.72E-8
grid	The grid numbers in horizontal direction. SDS7000A/SDS6000 Pro/SDS6000A/SDS5000X/ SDS3000X HD/SDS2000X Plus/SDS2000X HD/SDS1000X HD/SDS800X HD:10 SHS800X/SHS1000X:12	10
index	The index of the data. The first point is 0.	
interval	Sampling interval. It is the value with address 176~179 in the data block returned by the :WAVeform:PREamble?	2E-10

The picture above as an example:

The first data point: time value = (1.72E-8)-(2E-08*10/2) = -8.28E-08 s = -82.8 ns.

The second data point: time value = -82.8 ns + 0.2 ns = -82.6 ns.

Use python to reconstruct the waveform: (See the code in Read Waveform Data Example)

For digital channel waveform:

Step 1: Send the commands to get the data of waveform.

Command message:

:WAVeform:SOURce D0

:WAVeform:DATA?

Response message:

The header is "#9000002500" which nine ASCII integers are used to give the number of the waveform data points (2500 pts). After the header of block, is beginning of the wave data. For digital, one bit represents a data point, if the number of points is not an integer multiple of 8, the byte less than 8 bits will be filled with 0. So there are 313 bytes. The last two bytes "0A 0A" means the end of data.

Data																	Description
23 39	30 30	30	30	30	32	35	30	30	FF	#9000002500							
FF FF	FF FF																
FF FF	FF FF	00															
00 00	00 00	00	00	00	00	00	00	00	00	00	00	00	00	00	00	00	
00 00	00 00	00	00	00	00	00	00	00	00	00	00	00	00	00	00	00	
00 00	00 00	00	00	00	00	00	00	00	00	00	00	00	00			00	
FF FF	FF FF																
FF OA	0A																.\n\n

Step 2: Send the query to get the parameters of waveform.

Query message:

:WAVeform:PRE?

For parameter parsing, see the section of the query. Through the query, we can get the timabase is 2E-7 s, the trigger delay is 2E-7 s, and the sampling interval is 2E-10 s.

Step 3: Covert to the high (1) and low (0) corresponding to the data point.

According to the wave data, we can know the first eight points of waveform is the 17th byte "FF", convert to binary is "11111111" (Hexadecimal converted to binary (LSB)).

Step 4: Calculate the time value of the data point.

Using the formula: time value(S) = delay-(timebase*grid/2)+index*interval

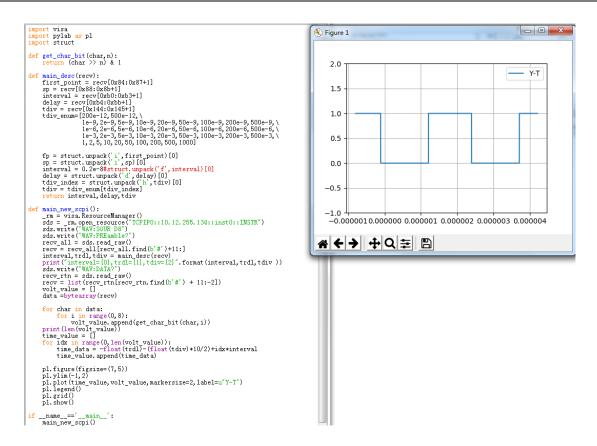

Parameter	Description	Example above
timebase	The horizontal scale.	2E-7
delay	The voltage position value.	2E-7
grid	The grid numbers in horizontal direction. SDS7000A/SDS6000Pro/SDS6000A/SDS5000X /SDS300X HD/SDS2000X Plus/SDS2000X HD/SDS1000X HD/SDS800X HD:10 SHS800X/SHS1000X:12	10
index	The index of the data. The first point is 0.	
interval	Sampling interval.	8E-10

The picture above as an example:

The first data point: time value = 2E-7-(2E-7*10/2) = -8E-07 s = -800 ns.

The second data point: time value = -800 ns + 0.8 ns = -799.2 ns.

Use python to reconstruct the waveform: (See the code in Read Waveform Data of Digital Example)

For an example of FFT waveform, please refer to Read Waveform Data of FFT Example.

:WAVeform:SEQuence

Command/Query

DESCRIPTION

This command is used to set the sequence waveform frame to be read. Valid only when sequence is on.

The query returns the index of sequence frame to be transferred.

COMMAND SYNTAX

:WAVeform:SEQuence <value1>,<value2>

<value1>:= Value in NR1 format, including an integer and no decimal point, like 1.

It sets the index of sequence frame to be transferred with the query :WAVeform:DATA?. When set to 0, all sequence frames are returned and the query :WAVeform:DATA? will transfer as much sequence frames as it can transfer at once.

<value2>:= Value in NR1 format, including an integer and no decimal point, like 1.

It sets the start index of sequence frame to be transferred with the query :WAVeform:DATA? This value is valid when <value1> is set to 0.

Due to the memory limitation, when the number of all frames exceeds the limit, it is necessary to read by slice through <value2>. The number of slices can be calculated by read_frames (0x90-0x93) and sum_frames(0x94-0x97) in the query :WAVeform:PREamble?

Note:

- When sequence is enabled, <value1> will be set to 1 by default;when sequence and history are enabled, <value1> will be set to the current frame by default. In other cases, <value1> is set to 4294967295 by default.
- The value range is related to the current sequence number.

QUERY SYNTAX

:WAVeform:SEQuence?

RESPONSE FORMAT

<value1>,<value2>

<value1>:= Value in NR1 format, including an integer and no decimal point, like 1.

<value2>:= Value in NR1 format, including an integer and no decimal point, like 1.

EXAMPLE

After 5 frames are acquired in sequence mode, and history is enabled, there are 10 kpts per frame, totaling 50 kpts. After sending the following command, all segments can be read at one time through the query :WAVeform:DATA?.

Command message:

:WAVeform:SEQuence 0,1 WAV:SEQ 0,1

_

Query message: WAV:SEQ?

Response message:

0.1

See the python code in Read Sequence Waveform Data Example for reference.

WGEN Commands

When the oscilloscope supports the function generator module (built-in waveform generator or SAG1021I) and is licensed (Option FG), you can output sine, square, ramp, pulse, DC, noise, exponential rise, exponential fall, cardiac, gaussian pulse and arbitrary waveforms. The WGEN commands are used to select the waveform function and parameters.

The WGEN commands are the same as that of Siglent SDG series, so the format is not consistent with other groups. Refer to SDG programming guide for details.

- OUTPut
- SToreList
- SYNC
- VOLTPRT

ARbWaVe

Command/Query

DESCRIPTION This command sets or gets the basic wave parameters.

COMMAND SYNTAX <channel>:ARbWaVe INDEX,<index>

<channel>:ARbWaVe NAME,<name>

<channel>:={C1}, SAG and the built-in waveform generator
only support one output channel.

<index>:= the index of the arbitrary waveform from the table below.

<name>:= the name of the arbitrary waveform from the table below.

Note:

This table is just an example, the index depends on the specific model. The "STL?" query can be used to get the accurate mapping relationship between the index and name.

Index	Name	Index	Name	Index	Name	Index	Name
0	Sine	12	Logfall	24	Gmonopuls	36	Triang
1	Noise	13	Logrise	25	Tripuls	37	Harris
2	StairUp	14	Sqrt	26	Cardiac	38	Bartlett
3	StairDn	15	Root3	27	Quake	39	Tan
4	Stairud	16	X^2	28	Chirp	40	Cot
5	Ppulse	17	X^3	29	Twotone	41	Sec
6	Npulse	18	Sinc	30	Snr	42	Csc
7	Trapezia	19	Gaussian	31	Hamming	43	Asin
8	Upramp	20	Dlorentz	32	Hanning	44	Acos
9	Dnramp	21	Haversine	33	Kaiser	45	Atan
10	Exp_fall	22	Lorentz	34	Blackman	46	Acot
11	Exp_rise	23	Gauspuls	35	Gausswin	47	Square

QUERY SYNTAX <channel>:ARbWaVe?

<channel>:= {C1}

RESPONSE FORMAT <channel>:ARWV

INDEX,<index>,NAME,<name>

RELATED COMMANDS SToreList

EXAMPLE

Set CH1 current waveform by index 2:

C1:ARWV INDEX,2

Read CH1 current waveform:

C1:ARWV?

Return:

C1:ARWV INDEX,2,NAME,StairUp

Set CH1 current waveform to wave_1 by name.

C1:ARWV NAME,wave_1

BaSic_WaVe

Command/Query

DESCRIPTION This command sets or gets the basic wave parameters.

COMMAND SYNTAX <channel>:BaSic_WaVe <parameter>,<value>

<channel>:={C1}, SAG and the built-in waveform generator
only support one output channel.

<parameter>:= a parameter from the table below.

<value>:= value of the corresponding parameter.

Parameters	Value	Description
WVTP	<type></type>	:= {SINE, SQUARE, RAMP, PULSE, NOISE, ARB, DC, PRBS, IQ}. If the command doesn't set basic waveform type, WVPT will be set to the current waveform.
FRQ	<frequency></frequency>	:= frequency. The unit is Hertz "Hz". Refer to the data sheet for the range of valid values. Not valid when WVTP is NOISE or DC.
PERI	<period></period>	:= period. The unit is seconds "s". Refer to the data sheet for the range of valid values. Not valid when WVTP is NOISE or DC.
AMP	<amplitude></amplitude>	:= amplitude. The unit is volts, peak-to-peak "Vpp". Refer to the data sheet for the range of valid values. Not valid when WVTP is NOISE or DC.
OFST	<offset></offset>	:= offset. The unit is volts "V". Refer to the data sheet for the range of valid values. Not valid when WVTP is NOISE.
SYM	<symmetry></symmetry>	:= {0 to 100}. Symmetry of RAMP. The unit is "%". Only settable when WVTP is RAMP.
DUTY	<duty></duty>	:= {0 to 100}. Duty cycle. The unit is "%". Value depends on frequency. Only settable when WVTP is SQUARE or PULSE.
STDEV	<stdev></stdev>	:= standard deviation of NOISE. The unit is volts "V". Refer to the data sheet for the range of valid values. Only settable when WVTP is NOISE.
MEAN	<mean></mean>	:= mean of NOISE. The unit is volts "V". Refer to the data sheet for the range of valid values. Only settable when WVTP is NOISE.
WIDTH	<width></width>	:= positive pulse width. The unit is seconds "s". Refer to the data sheet for the range of valid values. Only settable when WVTP is PULSE.

QUERY SYNTAX <channel>: BaSic_WaVe?

<channel>:= {C1}

RESPONSE FORMAT <channel>:BSWV

<parameter>:= All the parameters of the current basic

waveform.

EXAMPLE Change the waveform type of C1 to Ramp:

C1:BSWV WVTP,RAMP

Change the frequency of C1 to 2000 Hz:

C1:BSWV FRQ,2000

Set the amplitude of C1 to 3 Vpp:

C1:BSWV AMP,3

Return parameters of C1 from the device:

C1:BSWV?

Return:

C1:BSWV

WVTP,SINE,FRQ,100HZ,PERI,0.01S,AMP,2V,OFST,0V,HLEV,

1V,LLEV,-1V,PHSE,0

OUTPut

Command/Query

DESCRIPTION This command enables or disables the output port(s) at the

front panel. The query returns "ON" or "OFF" and "LOAD",

"PLRT", "RATIO" parameters.

COMMAND SYNTAX <channel>:OUTPut <state>,LOAD,<load>

<channel>:= {C1}, SAG and the built-in waveform generator

only support one output channel.

<state>:= {ON|OFF}

<load>:= {50|HZ}. The unit is ohm.

QUERY SYNTAX <channel>:OUTPut?

RESPONSE FORMAT <a href="https:/

<state>:= {ON|OFF}

 $< load > := {50|HZ}$

<polarity>:= {NOR|INVT}, in which NOR refers to normal, and INVT refers to invert. SAG and the built-in waveform generator

only support to set to NOR.

EXAMPLE Turn on CH1:

C1:OUTP ON

Read CH1 output state:

C1:OUTP?

Return:

C1:OUTP ON,LOAD,HZ,PLRT,NOR

Set the load of CH1 to 50 ohm:

C1:OUTP LOAD,50

Set the load of CH1 to HiZ:

C1:OUTP LOAD,HZ

SToreList

Query

DESCRIPTION

This query is used to read the stored waveforms list with indexes and names. If the store unit is empty, the command will return "EMPTY" string.

QUERY SYNTAX

SToreList? [<location>]

<location>:= {BUILDIN|USER}

EXAMPLE

Read all arbitrary data saved in the built-in waveform generator in SDS2000X Plus.

STL?

Return:

STL M10, ExpFal, M100, ECG14, M101, ECG15, M102, LFPulse, M103, Tens1, M104, Tens2, M105, Tens3, M106, Airy, M107, Besselj, M108, Bessely, M109, Dirichlet, M11, ExpRise, M110, Erf, M111, Erfc, M112, ErfcInv, M113, ErfInv, M114, Laguerre, M115, Legend, M116, Versiera, M117, Weibull, M118, LogNormal, M119, Laplace, M12, LogFall, M120, Maxwell, M121, Rayleigh, M122, Cauchy, M123, CosH, M124, CosInt, M125, CotH, M126, CscH, M127, SecH, M128, SinH, M129, SinInt, M13, LogRise, M130, TanH, M131, ACosH, M132, ASecH, M133, ASinH, M134, ATanH, M135, ACsch, M136, ACoth, M137, Bartlett, M138, BohmanWin, M139, ChebWin, M14, Sqrt, M140, FlattopWin, M141, ParzenWin, M142, TaylorWin, M143, TukeyWin, M144, Duty01, M145, Duty02, M146, Duty04, M147, Duty06, M148, Duty08, M149, Duty10, M15, Root3, M150, Duty12, M151, Duty14, M152, Duty16, M153, Duty18, M154, Duty20, M155, Duty22, M156, Duty24, M157, Duty26, M158, Duty28, M159, Duty30, M16, X^2, M160, Duty32, M161, Duty34, M162, Duty36, M163, Duty38, M164, Duty40, M165, Duty42, M166, Duty44, M167, Duty46, M168, Duty48, M169, Duty50, M17, X³, M170, Duty52, M171, Duty54, M172, Duty56, M173, Duty58, M174, Duty60, M175, Duty62, M176, Duty64, M177, Duty66, M178, Duty68, M179, Duty70, M18, Sinc. SYNC

Command/Query

DESCRIPTION This command sets or gets the synchronization signal.

COMMAND SYNTAX <channel>:SYNC <state>

<channel>:= {C1}, SAG and the built-in waveform generator

only support one output channel.

<state>:= {ON|OFF}

QUERY SYNTAX <channel>:SYNC?

<channel>:= {C1}

RESPONSE FORMAT <a

<channel>:= {C1}

<state>:= {ON|OFF}

<TYPE>:={CH1}, SAG and the built-in waveform generator only support one output channel, so it can only be CH1.

EXAMPLE Turn on sync output:

C1:SYNC ON

Read state of CH1 sync.

C1:SYNC?

Return:

C1:SYNC ON, TYPE, CH1

VOLTPRT

Command/Query

DESCRIPTION This commend sets or gets the state of over-voltage

protection.

COMMAND SYNTAX VOLTPRT <state>

<state>:= {ON|OFF}

QUERY SYNTAX VOLTPRT?

RESPONSE FORMAT VOLTPRT <state>

METEr Commands

The meter system commands are only for the multimeter functions of SHS800X/SHS1000X handheld digital oscilloscope. Support for configuration and measurement.

- MMETer
- READ
- CONFigure Commands
- MEASure Commands
- SENSe Commands

MMETer

Command

DESCRIPTION Enter the multimeter.

COMMAND SYNTAX MMETer <switch>

<switch>:= {ON|OFF}

EXAMPLE Enter the multimeter

Command message:

MMETer ON

READ

Query

DESCRIPTION Read measurement results.

QUERY SYNTAX READ?

RESPONSE FORMAT MM_VALUE <value>

EXAMPLE Read measurement results

Command message:

READ?

Response message: MM_VALUE 0.00V

CONFigure Commands

The CONFigure commands are the most concise way to configure measurements. These commands use default measurement configuration values. However, these commands do not automatically start measurements, so you can modify measurement attributes before initiating the measurement.

- CONFigure
- CONFigure:CAPacitance
- CONFigure:CONTinuity
- CONFigure:CURRent:AC
- CONFigure:CURRent:DC
- CONFigure:DIODe
- CONFigure:RESistance
- CONFigure[:VOLTage]:AC
- CONFigure[:VOLTage]:DC

CONFigure

Query

DESCRIPTION Returns the present function and measured value. The present

function name is returned in short format, such as ACV.

QUERY SYNTAX CONFigure?

RESPONSE FORMAT <func>

<func>:= {DCV|ACV|RES|DIODE|CONTINUITY|CAP|DCI|ACI}

EXAMPLE Return the present function and measured value:

Command message:

CONFigure?

Response message:

DCV -04.mV

CONFigure:CONTinuity

Command

DESCRIPTION Sets all measurement parameters and trigger parameters to

their default values for continuity measurements.

The READ? and MEASure:CONTinuity? queries return the measured resistance. If the resistance is greater than 600Ω , the instrument displays the word overload on front panel and

returns "Overload" from the remote interface.

COMMAND SYNTAX CONFigure: CONTinuity

EXAMPLE Configure the instrument for continuity measurements. and

read the measurement:

Command message:

CONF:CONT READ?

Response message:

Overload

CONFigure:CURRent:AC

Command/Query

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for AC current measurements. Also specifies the range through the incoming parameters.

- You can let autoranging select the measurement range, or you can manually select a fixed range. Autoranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (autoranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.
- Use READ? to start the measurement.

COMMAND SYNTAX

CONFigure:CURRent:AC <range>

<range>:= {60mA|600mA|6A|10A|AUTO|MIN|MAX|DEF}

Default: AUTO

EXAMPLE

Configure AC current measurements using the 6A range. And read measurement:

Command message: CONF:CURR:AC 6A READ?

Response message: +4.32133675E-04

CONFigure:CURRent:DC

Command/Query

DESCRIPTION Sets all measurement parameters and trigger parameters to

their default values for DC current measurements. Also specifies the range through the incoming parameters.

COMMAND SYNTAX CONFigure: CURRent: DC < range >

<range>:= {60mA|600mA|6A|10A|AUTO|MIN|MAX|DEF}

Default: AUTO

EXAMPLE Configure DC current measurements using the 6A range. And

read measurement:

Command message: CONF:CURR:DC 6A

READ?

Response message: +4.32133675E-04

CONFigure:DIODe

Command

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for diode measurements.

- The range is fixed for diode tests is 2 VDC.
- The READ? and MEASure:DIODe? queries return the measured voltage. If the voltage is greater than 2V, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.
- Use READ? to start the measurement.

COMMAND SYNTAX

CONFigure:DIODe

EXAMPLE

Configure diode measurement, and read the measurement:

Command message:

CONF:DIOD READ?

Response message:

Overload

CONFigure: RESistance

Command

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for 2-wire (RESistance) resistance measurements. Also specifies the range and resolution.

- You can let autoranging select the measurement range, or you can manually select a fixed range. Autoranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (autoranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word Overload on front panel and returns "Overload" from the remote interface.
- Use READ? to start the measurement.

COMMAND SYNTAX

CONFigure: RESistance < range>

 $< range > := \{600|6k|600k|600k|6M|60M|AUTO|MIN|MAX|DEF\}$

Default: AUTO

EXAMPLE

Configure 2-wire resistance measurements using the 600 Ω range. Make and read measurements.

Command message:

CONF:RES 600 READ?

Response message:

+6.71881065E+01

780

CONFigure[:VOLTage]:AC

Command

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for AC voltage measurements. Also specifies the range through the incoming parameters.

- You can let autoranging select the measurement range, or you can manually select a fixed range. Autoranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (autoranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word Overload on front panel and returns "Overload" from the remote interface.
- Use READ? to start the measurement.

COMMAND SYNTAX

CONFigure[:VOLTage]:AC <range>

Model	<range></range>
SHS800X	{60mV 600mV 6V 60V 600V AUTO MIN MAX DEF}
SHS1000X	{60mV 600mV 6V 60V 600V 750V AUTO MIN MAX DEF}

Default: AUTO

EXAMPLE

Configure AC voltage measurements using the 60 V range. Read measurements:

Command message: CONF:VOLT:AC 60 READ?

Response message: +2.43186951E-02

CONFigure[:VOLTage]:DC

Command

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for DC voltage measurements. Also specifies the range through the incoming parameters.

- You can let autoranging select the measurement range, or you can manually select a fixed range. Autoranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (autoranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word Overload on front panel and returns "Overload" from the remote interface.
- Use READ? to start the measurement.

COMMAND SYNTAX

CONFigure[:VOLTage]:DC <range>

Model	<range></range>
SHS800X	{60mV 600mV 6V 60V 600V AUTO MIN MAX DEF}
SHS1000X	{60mV 600mV 6V 60V 600V 1000V AUTO MIN MAX DEF}

Default: AUTO

EXAMPLE

Configure DC voltage measurements using the 60 V range. Read measurements:

Command message: CONF:VOLT:DC 60 READ?

Response message: +2.43186951E-02

CONFigure: CAPacitance

Command

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for capacitance measurement.

- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word Overload on front panel and returns "Overload" from the remote interface.
- Use READ? to start the measurement.

COMMAND SYNTAX

EXAMPLE

CONFigure:CAPacitance

Configure capacitance measurement using the 4uF range. Read measurements:

Command message:

CONF:CAP READ?

Response message:

+7.26141264E-10

MEASure Commands

The MEASure queries are the easiest way to program measurements because they always use default measurement parameters. You set the function, range in one command, but you cannot change other parameters from their default values. The results are sent directly to the instrument's output buffer.

Note: A MEASure query is functionally equivalent to sending CONFigure followed immediately by READ? The difference is that CONFigure commands allow you to change parameters between the CONFigure and the READ?

MEASure:CONTinuity

MEASure:CURRent:AC

MEASure:CURRent:DC

MEASure:DIODe

MEASure:RESistance

MEASure[:VOLTage]:AC

MEASure[:VOLTage]:DC

MEASure[:VOLTage]:AC

MEASure:CAPacitance

MEASure:CONTinuity

Query

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for continuity test and immediately triggers a measurement. The results are sent directly to the instrument's output buffer.

- The range is fixed at 600Ω for continuity tests (a 2-wire resistance measurement).
- The instrument beeps (if the beeper is enabled) for each measurement less than or equal to the continuity threshold, and the actual resistance measurement appears on the display.
- The READ? and MEASure:CONTinuity? queries return the measured resistance. If the resistance is greater than 600Ω, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.

QUERY SYNTAX

RESPONSE FORMAT

EXAMPLE

MEASure: CONTinuity?

<value>

Configure the instrument for continuity measurements. Then Read measurements:

Command message:

MEAS:CONT?

Response message: +9.84739065E+02

MEASure:CURRent:AC

Query

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for AC current measurements and immediately triggers a measurement. Also specifies the range through the incoming parameters.

- You can let auto ranging select the measurement range, or you can manually select a fixed range. Auto ranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (auto ranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word Overload on front panel and returns "Overload" from the remote interface.

QUERY SYNTAX

MEASure:CURRent:AC? <range>

<range>:={60mA|600mA|6A|10A|AUTO}

Default: AUTO

RESPONSE FORMAT

<value>

EXAMPLE

Configure AC current measurement using the 6A range. Read measurements:

Command message:

MEAS:CURR:AC? 6

Response message:

+4.32133675E-04

MEASure:CURRent:DC

Query

DESCRIPTION Sets all measurement parameters and trigger parameters to

their default values for DC current measurements and

immediately triggers a measurement. Also specifies the range

through the incoming parameters.

QUERY SYNTAX MEASure:CURRent:DC? <range>

<range>:={60mA|600mA|6A|10A|AUTO}

Default: AUTO

RESPONSE FORMAT <value>

EXAMPLE Configure DC current measurement using the 6A range. Read

measurements:

Command message: MEAS:CURR:DC? 6

Response message: +4.32133675E-04

MEASure:DIODe

Query

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values for diode test measurements and immediately triggers a measurement. The results are sent directly to the instrument's output buffer.

- The range and resolution are fixed for diode tests: the range is 2 VDC.
- The READ? and MEASure:DIODe? queries return the measured voltage. If the voltage is greater than 2V, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.

QUERY SYNTAX

MEASure:DIODe?

RESPONSE FORMAT

<value>

EXAMPLE

Configureand read a default diode measurement: *MEAS:DIOD?*

Response message:

+9.84733701E-01

MEASure: RESistance

Query

DESCRIPTION

Sets all measurement to their default values for 2-wire (RESistance) measurements, and immediately triggers a measurement. The results are sent directly to the instrument's output buffer. Also specifies the range through the incoming parameters.

- You can let auto ranging select the measurement range, or you can manually select a fixed range. Auto ranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (auto ranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.

QUERY SYNTAX

MEASure:RESistance? <range>

<range>:={600|6k|60k|600k|6M|60M}

Default: AUTO

RESPONSE FORMAT

<value>

EXAMPLE

Configure 2-wire resistance measurements using the 600Ω range. Make and read measurements.

Command message:

MEAS:RES? 600

Response message: +6.71881065E+01

MEASure[:VOLTage]:AC

Query

DESCRIPTION

Sets all measurement parameters and trigger parameters to their default values and immediately triggers a measurement. The results are sent directly to the instrument's output buffer. Also specifies the range through the incoming parameters.

- You can let auto ranging select the measurement range, or you can manually select a fixed range. Auto ranging conveniently selects the range for each measurement based on the input signal. For fastest measurements, use manual ranging (auto ranging may require additional time for range selection).
- If the input signal is greater than can be measured on the specified manual range, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.

QUERY SYNTAX

MEASure:VOLTage:AC? <range>

Model	<range></range>
SHS800X	{60mV 600mV 6V 60V 600V}
SHS1000X	{60mV 600 mV 6V 60V 600V 1000V(DC)/750V(AC)}

Default: AUTO

RESPONSE FORMAT

<value>

EXAMPLE

Configure AC voltage measurements using the 600 V range. Read measurements:

Command message: *MEAS:VOLT:AC? 600*

Response message: +2.43186951E-02

MEASure[:VOLTage]:DC

Query

DESCRIPTION Sets all measurement parameters and trigger parameters to

their default values and immediately triggers a measurement. The results are sent directly to the instrument's output buffer. Also specifies the range through the incoming parameters.

QUERY SYNTAX MEASure: VOLTage: DC? < range >

Model	<range></range>
SHS800X	{60mV 600mV 6V 60V 600V}
SHS1000X	{60mV 600 mV 6V 60V 600V 1000V(DC)/750V(DC)}

Default: AUTO

RESPONSE FORMAT <value>

EXAMPLE Configure DC voltage measurements using the 600 V range.

Read measurements:

Command message: *MEAS:VOLT:DC? 600*

Response message: +2.43186951E-02

MEASure:CAPacitance

Query

DESCRIPTION

Sets all measurement parameters o their default values for capacitance measurement.

 If the input signal is greater than can be measured on the specified manual range, the instrument displays the word overload on front panel and returns "Overload" from the remote interface.

QUERY SYNTAX MEASure: CAPacitance?

RESPONSE FORMAT <value>

EXAMPLE Command message: *MEAS:CAP?*

Response message:

+7.26141264E-10

SENSe Commands

- [SENSe:]CAPacitance:NULL
- [SENSe:]CURRent:AC:NULL
- [SENSe:]CURRent:AC:SELEct
- [SENSe:]CURRent:DC:NULL
- [SENSe:]CURRent:DC:SELEct

- [SENSe:]VOLTage:DC:NULL
- [SENSe:]VOLTage:DC:SELEct

[SENSe:]CURRent:AC:NULL

Command

DESCRIPTION

Enables or disables the relative function for AC current measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and DC measurements.

- Enabling the scaling function also enables automatic relative value selection ([SENSe:]CURRent:AC:NULL ON).
- The instrument disables the relative function after a Factory Reset or CONFigure function.

COMMAND SYNTAX

[SENSe:]CURRent:AC:NULL <state>

<state>:={ON|OFF}

Default: OFF

EXAMPLE

Configure AC current measurements.

CONF:CURR:AC CURR:AC:NULL ON

READ?

Response message: MM_VALUE 0.00V

[SENSe:]CURRent:DC:NULL

Command

DESCRIPTION

Enables or disables the relative function for DC current measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and DC measurements.

- Enabling the scaling function also enables automatic relative value selection ([SENSe:]CURRent:DC:NULL ON).
- The instrument disables the relative function after a Factory Reset or CONFigure function.

COMMAND SYNTAX

[SENSe:]CURRent:DC:NULL <state>

<state>:={ON|OFF}

Default: OFF

EXAMPLE

Configure DC current measurements.

CONF:CURR:DC CURR:DC:NULL ON

READ?

Response message: MM VALUE 0.00V

[SENSe:]CURRent:AC:SELEct

Command

DESCRIPTION mA or A selection for AC current measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and

DC measurements.

COMMAND SYNTAX

[SENSe:]CURRent:AC:SELEct <unit>

<unit $>:={MA|A}$

EXAMPLE

CONF:CURR:AC CURR:AC:SELE MA

[SENSe:]CURRent:DC:SELEct

Command

DESCRIPTION mA or A selection for DC current measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and

DC measurements.

COMMAND SYNTAX [SENSe:]CURRent:DC:SELEct <unit>

<unit $>:={MA|A}$

EXAMPLE CONF:CURR:DC

CURR:DC:SELE MA

[SENSe:]RESistance:NULL

Commend

DESCRIPTION

Enables or disables the relative function for resistance measurements.

- Enabling the scaling function also enables automatic relative value selection ([SENSe:]RESistance:NULL ON).
- The instrument disables the relative function after a Factory Reset or CONFigure function.

COMMAND SYNTAX

[SENSe:]RESistance:NULL <state>

<state>:={ON|OFF}

Default: OFF

EXAMPLE

Configure 2-wire resistance measurements, provide $1.5K\Omega$ measurement resistance. Make and read measurements

Command message:

CONF:RES RES:NULL ON READ?

Response message:

0

[SENSe:]VOLTage:AC:NULL

Commend

DESCRIPTION Enables or disables the relative function for AC voltage

measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and

DC measurements.

The instrument disables the relative function after a Factory

Reset or CONFigure function.

COMMAND SYNTAX [SENSe:]VOLTage:AC:NULL <state>

<state>:={ON|OFF}

Default:OFF

EXAMPLE Configure AC voltage measurements, Provide 1.5V AC voltage

signal, Make and read measurements:

Command message:

CONF:VOLT:AC VOLT:AC:NULL ON

READ?

Response message:

MM_VALUE 00.04V

[SENSe:]VOLTage:DC:NULL

Commend

DESCRIPTION Enables or disables the relative function for DC voltage

measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and

DC measurements.

The instrument disables the relative function after a Factory

Reset or CONFigure function.

COMMAND SYNTAX [SENSe:]VOLTage:DC:NULL <state>

<state>:={ON|OFF}

Default: OFF

EXAMPLE Configure DC voltage measurements, Provide 1.5V DC

voltage signal, Make and read measurements:

Command message:

CONF:VOLT:DC VOLT:DC:NULL ON

READ?

Response message:

MM_VALUE 00.04V

[SENSe:]VOLTage:AC:SELEct

Commend

DESCRIPTION mV or V selection for AC voltage measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and

DC measurements.

COMMAND SYNTAX [SENSe:]VOLTage:AC:SELEct <unit>

<unit $>:={MV|V}$

EXAMPLE CONF:VOLT:AC

VOLT:AC:SELE V

[SENSe:]VOLTage:DC:SELEct

Commend

DESCRIPTION mV or V selection for DC voltage measurements.

Note: This parameter is not shared between AC and DC measurements. The parameters are independent for AC and

DC measurements.

COMMAND SYNTAX [SENSe:]VOLTage:DC:SELEct <unit>

<unit $>:={MV|V}$

EXAMPLE CONF:VOLT:DC

VOLT:DC:SELE V

[SENSe:]CAPacitance:NULL

Commend

DESCRIPTION Enable or disable the relative function for capacitance

measurement.

COMMAND SYNTAX [SENSe:]CAPacitance:NULL <state>

<state>:={ON|OFF}

Default: OFF

EXAMPLE Configure capacitance measurements, make and read

measurements:

Command message:

CONF:CAP CAP:NULL ON

READ?

Response message: *MM_VALUE 0.00nF*

Programming Examples

This chapter gives some examples for the programmer. In these examples you can see how to use VISA or sockets, in combination with the commands described above to control the oscilloscope. By following these examples, you can develop many more applications.

VISA Examples

- VC++ Example
- VB Example
- MATLAB Example
- LabVIEW Example
- C# Example

♦ Examples of Using Sockets

VISA Examples

VC++ Example

Environment: Win7 32-bit, Visual Studio.

Description: Use National Instruments VISA to control the device with USBTMC or TCP/IP access. Perform a write and read operation.

Steps:

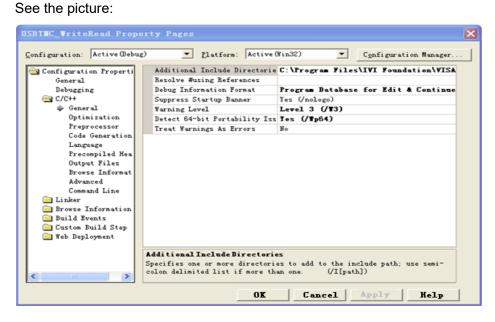

- Open Visual Studio, create a new VC++ win32 project.
- Set the project environment to use the NI-VISA library. There are two ways to use NI-VISA, static or automatic:
- a) Static:

Find the files visa.h, visatype.h, visa32.lib in the NI-VISA installation path, copy them to your project, and add them into the project. In the projectname.cpp file, add the follow two lines: #include "visa.h"

#pragma comment(lib,"visa32.lib")

b) Automatic:

Set the .h file include directory, the NI-VISA install path, in our computer we set the path is: C:\Program Files\IVI Foundation \VISA\WinNT\include. Set this path to: project->properties->C/C++->General->Additional Include Directories.

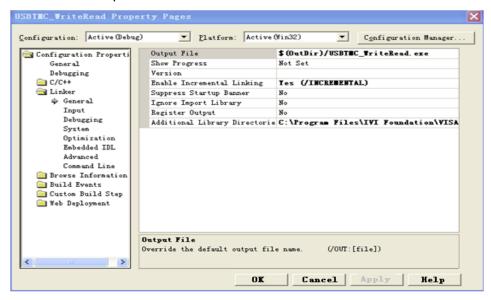

Set lib path set lib file:

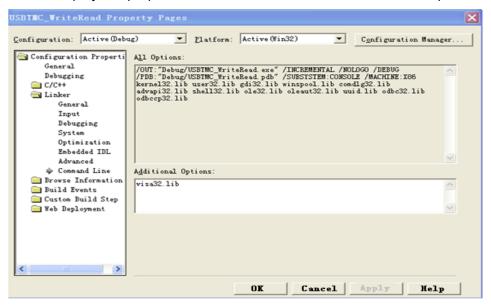

Set lib path: the NI-VISA install path, in our computer we set the path is C:\Program Files\IVI Foundation\VISA\WinNT\lib\msc. Set this path to:

project->properties->Linker->General->Additional Library Directories.

As shown in the pictures below:

Set lib file:project->properties->Linker->Command Line->Additional Options: visa32.lib

Include visa.h file in the projectname.cpp file:

#include <visa.h>

- Coding:
- a) USBTMC:

```
Int Usbtmc_test()
{
    /* This code demonstrates sending synchronous read & write commands */
    /* to an USB Test & Measurement Class (USBTMC) instrument using */

*/
```

```
/* NI-VISA
                           */
  /* The example writes the "*IDN?\n" string to all the USBTMC
  /* devices connected to the system and attempts to read back

```

VB Example

Environment: Windows7 32-bit, Microsoft Visual Basic 6.0

Description: The function of this example: Use the NI-VISA, to control the device with USBTMC and TCP/IP access to do a write and read.

Steps:

- 1. Open Visual Basic, and build a standard application program project.
- 2. Set the project environment to use the NI-VISA lib: Click the Existing tab of Project->Add Module, search the visa32.bas file in the "include" folder under the NI-VISA installation path and add the file, as shown in the figure below:

- Coding:
- a) USBTMC:

Private Function Usbtmc test() As Long

- 'This code demonstrates sending synchronous read & write commands
- ' to an USB Test & Measurement Class (USBTMC) instrument using
- 'NI-VISA
- 'The example writes the "*IDN?\n" string to all the USBTMC
- ' devices connected to the system and attempts to read back
- ' results using the write and read functions.
- 'The general flow of the code is
- ' Open Resource Manager
- ' Open VISA Session to an Instrument
- ' Write the Identification Query Using viWrite
- ' Try to Read a Response With viRead

```
Close the VISA Session
Const MAX CNT = 200
Dim defaultRM As Long
Dim instrsesn As Long
Dim numInstrs As Long
Dim findList As Long
Dim retCount As Long
Dim writeCount As Long
Dim status As Long
Dim instrResourceString As String * VI_FIND_BUFLEN
Dim buffer As String * MAX_CNT
Dim i As Integer
'First we must call viOpenDefaultRM to get the manager
' handle. We will store this handle in defaultRM.
status = viOpenDefaultRM(defaultRM)
If (status < VI_SUCCESS) Then
    Debug. Print "Could not open a session to the VISA Resource Manager!"
    Usbtmc_test = status
    Exit Function
End If
' Find all the USB TMC VISA resources in our system and store the
' number of resources in the system in numInstrs.
status= ViFindRsrc(defaultRM,"USB?*INSTR",findList,numInstrs,instrResourceString)
If (status < VI_SUCCESS) Then
    Debug. Print "An error occurred while finding resources."
    viClose (defaultRM)
    Usbtmc_test = status
    Exit Function
End If
' Now we will open VISA sessions to all USB TMC instruments.
'We must use the handle from viOpenDefaultRM and we must
' also use a string that indicates which instrument to open. This
' is called the instrument descriptor. The format for this string
' can be found in the function panel by right clicking on the
' descriptor parameter. After opening a session to the
```

```
' device, we will get a handle to the instrument which we
' will use in later VISA functions. The AccessMode and Timeout
' parameters in this function are reserved for future
'functionality. These two parameters are given the value VI_NULL.
For i = 0 To numInstrs
    If (i > 0) Then
        status = viFindNext(findList, instrResourceString)
    End If
    status = viOpen(defaultRM, instrResourceString, VI_NULL, VI_NULL, instrsesn)
    If (status < VI_SUCCESS) Then
        Debug.Print "Cannot open a session to the device ", i + 1
        GoTo NextFind
    End If
    ' At this point we now have a session open to the USB TMC instrument.
    'We will now use the viWrite function to send the device the string "*IDN?",
    ' asking for the device's identification.
    status = viWrite(instrsesn, "*IDN?", 5, retCount)
    If (status < VI_SUCCESS) Then
            Debug.Print "Error writing to the device."
            status = viClose(instrsesn)
            GoTo NextFind
    End If
    ' Now we will attempt to read back a response from the device to
    ' the identification query that was sent. We will use the viRead
    ' function to acquire the data.
    ' After the data has been read the response is displayed.
    status = viRead(instrsesn, buffer, MAX_CNT, retCount)
    If (status < VI_SUCCESS) Then
        Debug.Print "Error reading a response from the device.", i + 1
    Else
        Debug.Print i + 1, retCount, buffer
    End If
    status = viClose(instrsesn)
Next i
```

' Now we will close the session to the instrument using

```
'viClose. This operation frees all system resources.
      status = viClose(defaultRM)
     Usbtmc_test = 0
   End Function
b) TCP/IP:
   Private Function TCP_IP_Test(ip As String) As Long
     Dim outputBuffer As String * VI FIND BUFLEN
     Dim defaultRM As Long
     Dim instrsesn As Long
     Dim status As Long
     Dim count As Long
     ' First we will need to open the default resource manager.
     status = viOpenDefaultRM (defaultRM)
     If (status < VI_SUCCESS) Then
          Debug. Print "Could not open a session to the VISA Resource Manager!"
         TCP_IP_Test = status
          Exit Function
     End If
     ' Now we will open a session via TCP/IP device
     status = viOpen(defaultRM, "TCPIP0::" + ip + "::INSTR", VI_LOAD_CONFIG, VI_NULL,
     instrsesn)
      If (status < VI_SUCCESS) Then
          Debug.Print "An error occurred opening the session"
         viClose (defaultRM)
         TCP IP Test = status
         Exit Function
     End If
     status = viWrite(instrsesn, "*IDN?", 5, count)
      If (status < VI_SUCCESS) Then
          Debug.Print "Error writing to the device."
     End If
     status = viRead(instrsesn, outputBuffer, VI_FIND_BUFLEN, count)
     If (status < VI_SUCCESS) Then
          Debug.Print "Error reading a response from the device.", i + 1
```

Else Debug.Print "read from device:", outputBuffer End If status = viClose(instrsesn) status = viClose(defaultRM) TCP_IP_Test = 0 End Function

MATLAB Example

Environment: Windows7 32-bit, MATLAB R2010b

Description: The function of this example: Use the NI-VISA, to control the device with USBTMC or TCP/IP access to do a write and read.

Steps:

- 1. Open MATLAB, and modify the current directory. In this demo, the current directory is modified to D:\USBTMC TCPIP Demo.
- 2. Click File>>New>>Script in the Matlab interface to create an empty M file.
- 3. Coding:
- a) USBTMC:

```
function USBTMC_test()
% This code demonstrates sending synchronous read & write commands
% to an USB Test & Measurement Class (USBTMC) instrument using
% NI-VISA
%Create a VISA-USB object connected to a USB instrument
vu = visa('ni','USB0::0xF4EC::0xEE38::0123456789::INSTR');
%Open the VISA object created
fopen(vu);
%Send the string "*IDN?",asking for the device's identification.
fprintf(vu,'*IDN?');
%Request the data
outputbuffer = fscanf(vu);
disp(outputbuffer);
%Close the VISA object
fclose(vu);
delete(vu);
clear vu;
end
```

b) TCP/IP:

```
function TCP_IP_test( IPstr )
% This code demonstrates sending synchronous read & write commands
% to an TCP/IP instrument using NI-VISA
%Create a VISA-TCPIP object connected to an instrument
%configured with IP address.
vt = visa('ni',['TCPIP0::',IPstr,'::INSTR']);
%Open the VISA object created
fopen(vt);
%Send the string "*IDN?", asking for the device's identification.
fprintf(vt,'*IDN?');
%Request the data
outputbuffer = fscanf(vt);
disp(outputbuffer);
%Close the VISA object
fclose(vt);
delete(vt);
clear vt;
end
```

LabVIEW Example

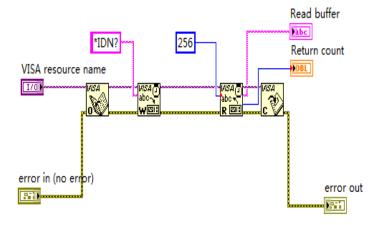

Environment: Windows7 32-bit, LabVIEW 2011

Description: The functions of this example: use the NI-VISA, to control the device with USBTMC and TCP/IP access to do a write and read.

Steps:

1. Open LabVIEW, create a VI file.

- 2. Add controls. Right-click in the **Front Panel** interface, select and add **VISA resource name**, error in, error out and some indicators from the Controls column.
- Open the Block Diagram interface. Right-click on the VISA resource name and you can select and add the following functions from VISA Palette from the pop-up menu: VISA Write, VISA Read, VISA Open and VISA Close.
- 4. The connection is as shown in the figure below:

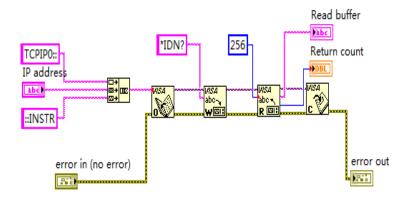

5. Select the device resource from the VISA Resource Name list box and run the program.

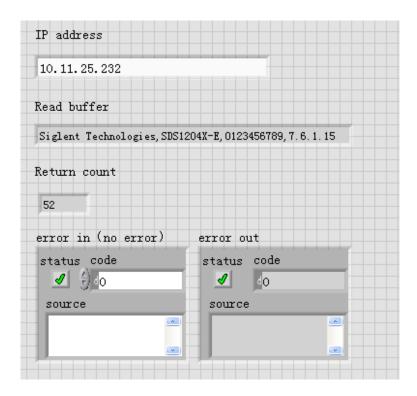

In this example, the VI opens a VISA session to a USBTMC device, writes a command to the device, and reads back the response. After all communication is complete, the VI closes the VISA session.

- 6. Communicating with the device via TCP/IP is similar to USBTMC. But you need to change VISA Write and VISA Read Function to Synchronous I/O. The LabVIEW default is asynchronous I/O. Right-click the node and select Synchronous I/O Mod>>Synchronous from the shortcut menu to write or read data synchronously.
- 7. The connection is as shown in the figure below:

8. Input the IP address and run the program.

C# Example

Environment: Windows7 32-bit, Visual Studio 2008/2010

Description: The functions of this example: use the NI-VISA, to control the device with USBTMC or TCP/IP access to do a write and read.

Steps:

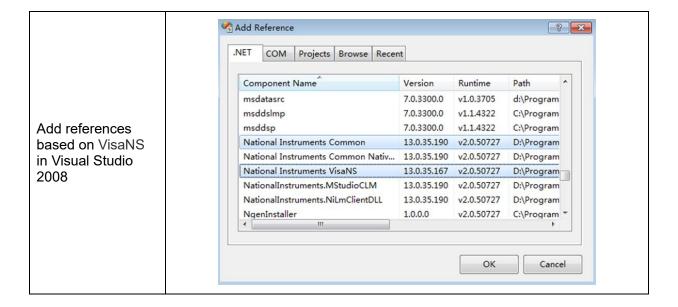

- 1. Open Visual Studio, create a new C# project.
- 2. Cut-and-paste the code that follows into the C# source file.
- 3. Edit the program to use the VISA address of your oscilloscope.
- Add References.

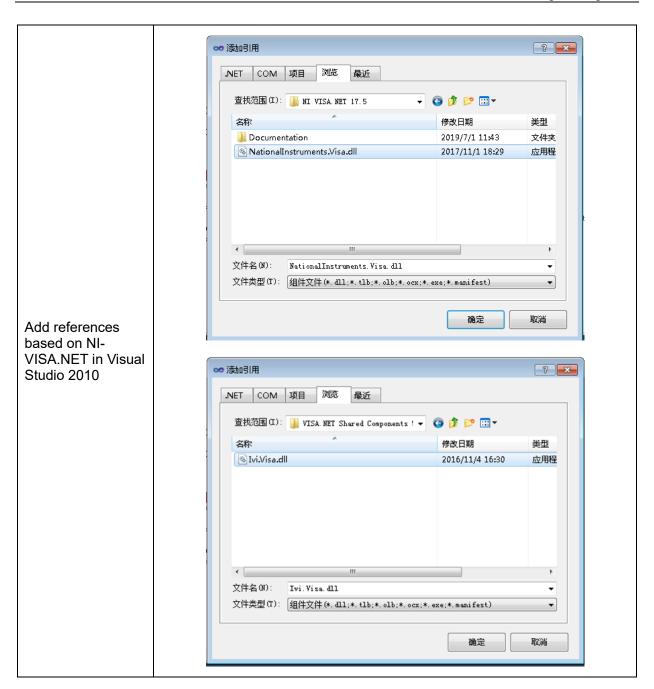

Add Ivi. Visa.dll and NationalInstruments. Visa.dll to the project.

If your NI-VISA version is too low(e.g. 5.4.0),you should add NationalInstruments.Common.dll and NationalInstruments.VisaNS.dll to the project. (Item 11 of this link details some of the main differences between NI-VISA .NET and NI-VISA NS: NI-VISA .NET Library - NI)

(Notice: you must install the .NET Framework 3.5/4.0/4.5 Languages support when you install the NI-VISA.)

- Right-click the project you wish to modify (not the solution) in the Solution Explorer window of the Microsoft Visual Studio environment.
- Choose Add Reference....
- In the Add Reference dialog, select the Browse tab, and navigate to the NI-VISA installed folder. (for example: C:\Program Files (x86)\IVI Foundation\VISA\Microsoft.NET\...)
- Select the .dll file above; then, click OK.

5. Code on VisaNS:

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using NationalInstruments.VisaNS;
namespace TestVisa
{
class Program
```

```
{
    static void Main(string[] args)
    // Find all the USBTMC resources
    string[]
    usbRsrcStrings=ResourceManager.GetLocalManager().FindResources("USB?*INSTR");
    if (usbRsrcStrings.Length <= 0)</pre>
    {
    Console.WriteLine("Cannot find USBTMC Device!");
    return;
    }
    //Choose the first resource string to connect the device.
    //You can input the address manually
    //USBTMC:
    //MessageBasedSession
    mbSession=(MessageBasedSession)ResourceManager.GetLocalManager().Open("USB0::0xF
    4EC::0xEE38::0123456789::INSTR");
    /TCP IP:
    //MessageBasedSession
    mbSession=(MessageBasedSession)ResourceManager.GetLocalManager().Open("TCPIP0::1
    92.168.1.100::INSTR");
    MessageBasedSession
    mbSession=(MessageBasedSession)ResourceManager.GetLocalManager().Open(usbRsrcStri
    ngs[0]);
    mbSession.Write("*IDN?");
    string result = mbSession.ReadString();
    mbSession.Dispose();
    Console.WriteLine(result);
    }
    }
    }
6. Code on Visa.NET:
    using System;
    using System.Collections.Generic;
    using System.Linq;
    using NationalInstruments.Visa;
```

```
using Ivi.Visa;
    namespace test_visa_csharp
        static class Program
        static void Main()
         TcpipSession section = new TcpipSession("TCPIP::10.12.255.135::inst0::INSTR");
             IMessageBasedFormattedIO io = section.FormattedIO;
         io.WriteLine("*IDN?");
         string result = io.ReadLine();
         section.Dispose();
         Console.WriteLine(result);
      }
    }
7. Example Read Waveform on Visa.NET:
    using System;
    using System.Collections.Generic;
    using System.Ling;
    using System.Windows.Forms;
    using NationalInstruments.Visa;
    using Ivi.Visa;
    using System.Runtime.InteropServices;
    using System. Threading;

Examples of Using Sockets

Socket communication is a basic communication technology in computer network. It allows applications to communicate through the standard network protocol mechanism built by network hardware and operation system.

This method is a two-way communication between the instrument and the computer through a fixed port number.

Note that SCPI strings are terminated with a "\n" (new line) character.

Python Example

Python has a low-level networking module that provides access to the socket interface. Python scripts can be written for sockets to do a variety of test and measurement tasks.

Environment: Windows7 32-bit, Python v2.7.5

Description: Open a socket, send a query, and repeat this loop for 10 times, finally close the socket.

Below is the code of the script:

```
#!/usr/bin/env python
#-*- coding:utf-8 -*-
#------
# The short script is a example that open a socket, sends a query,
# print the return message and closes the socket.
#------
import socket # for sockets
import sys # for exit
import time # for sleep
#------
remote_ip = "10.12.255.209" # should match the instrument's IP address
port = 5025 # the port number of the instrument service
count = 0

def SocketConnect():
    try:
```

```
#create an AF_INET, STREAM socket (TCP)
    s = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
  except socket.error:
    print ('Failed to create socket.')
    sys.exit();
  try:
    #Connect to remote server
    s.connect((remote_ip , port))
  except socket.error:
    print ('failed to connect to ip ' + remote_ip)
  return s
def SocketQuery(Sock, cmd):
  try:
    #Send cmd string
    Sock.sendall(cmd)
    Sock.sendall(b'\n')
    time.sleep(1)
  except socket.error:
    #Send failed
    print ('Send failed')
    sys.exit()
  reply = Sock.recv(4096)
  return reply
def SocketClose(Sock):
  #close the socket
  Sock.close()
  time.sleep(.300)
def main():
  global remote_ip
  global port
  global count
  # Body: send the SCPI commands *IDN? 10 times and print the return message
  s = SocketConnect()
  for i in range(10):
```

```
qStr = SocketQuery(s, b'*IDN?')
print (str(count) + ":: " + str(qStr))
count = count + 1
SocketClose(s)
input('Press "Enter" to exit')

if __name__ == '__main__':
    proc = main()
```

C Example

```
int MySocket;
if((MySocket=socket(PF_INET,SOCK_STREAM,0))==-1)
{
    exit(1);
struct in_addr
{
    unsigned long s_addr;
};
struct sockaddr_in
    short int sin_family; // Address family
    unsigned short int sin_port; // Port number
    struct in_addr sin_addr; // Internet address
    unsigned char sin_zero[8]; // Padding
};
struct sockaddr_in MyAddress;
// Initialize the whole structure to zero
memset(&MyAddress,0,sizeof(struct sockaddr_in));
// Then set the individual fields
MyAddress.sin_family=PF_INET; // IPv4
MyAddress.sin_port=htons(5025); // Port number used by most instruments
MyAddress.sin_addr.s_addr=inet_addr(ntsddr_in)); // IP Address
// Establish TCP connection
if(connect(MySocket,(struct sockaddr*)&MyAddress,sizeof(struct sockaddr_in))==-1)
{
    exit(1);
}
// Send SCPI command
if(send(MySocket,ands,sizeof(t_addr(
{
    exit(1);
}
```

```
// Read response
char buffer[200];
int actual;
if((actual=recv(MySocket,&buffer[0],200,0))==-1)
{
     exit(1);
}
buffer[actual]= 0; // Add zero character (C string)
printf(d zero character (C string)],2

// Close socket
if(close(MySocket)==-1)
{
     exit(1);
}
```

Common Command Examples

This section lists the programming instances of common commands.

Environment: Windows7 32-bit, Python v3.6.5, pyvisa-1.9, Matplotlib-3.1.1

Note: When using the visa library, you should pay attention to the following settings:

Set the I/O buffer size.

I.E. For the command ":WAVeform:DATA?", the read buffer size depends on the number of waveform points. When it needs to read in segments, the size of each segment is vary from the models.

Set the timeout value.

The timeout value is related to the network speed or USB transmission speed. Please evaluate by yourself. The initial value is generally 2s.

About SIGLENT

SIGLENT is an international high-tech company, concentrating on R&D, sales, production and services of electronic test & measurement instruments.

SIGLENT first began developing digital oscilloscopes independently in 2002. After more than a decade of continuous development, SIGLENT has extended its product line to include digital oscilloscopes, isolated handheld oscilloscopes, function/arbitrary waveform generators, RF/MW signal generators, spectrum analyzers, vector network analyzers, digital multimeters, DC power supplies, electronic loads and other general purpose test instrumentation. Since its first oscilloscope was launched in 2005, SIGLENT has become the fastest growing manufacturer of digital oscilloscopes. We firmly believe that today SIGLENT is the best value in electronic test & measurement.
