SIGLENT Technologies Exhibits at DesignCon 2018

February 06, 2018

SIGLENT once again exhibited at this year's Design Con show in Santa Clara, CA, JAN 31 – FEB 2. Vice president Zane Zhao and engineers from the North American team of SIGLENT showed a number of new products and technologies, including the newly released SDG6000X series pulse/arbitrary waveform generator, the SDS1204X-E low-cost four channel series super phosphor oscilloscope and more.

The SDS1000X-E Super Phosphor Oscilloscopes feature two channel and four channel models. The four channel version is available in 100 and 200 MHz models and incorporates two 1 GSa/s ADCs and two 14 Mpts memory modules. When all four channels are enabled, each channel has a sample rate of 500 MSa/s and a standard record length of 7 Mpts. When only a single channel per ADC is active, the maximum sample rate is 1 GSa/s and the maximum record length is 14 Mpts. For ease -of -use, the most commonly used functions can be quickly accessed with its user- friendly front panel design. In addition, the four channel series includes even more functions, including: searching and navigating, on-screen Bode plot, 16 digital channels (Option), an external USB powered 25 MHz AWG module (Option), a USB WIFI adapter (Option), and an embedded application that allows remote control via web browser. A powerful serial bus trigger and decode feature comes standard on all SDS1000X-E oscilloscopes.

The DesignCon show provided a great opportunity to meet with professionals and consultants from around the world and discuss the latest in test technology, such as DDR4, USB 3.1, PAM4 and their solutions.

North American Headquarters

SIGLENT Technologies America, Inc
6557 Cochran Rd Solon, Ohio 44139
