Basic pulse operations with a SIGLENT SSG3000X/5000X series RF Signal Source

August 04, 2022

In some cases, a device (DUT) or circuit-under-test may not be capable of handling continuous power delivery. Power over time usually adds heat to the DUT, damaging sensitive structures. Decreasing the duration of time a signal is on (pulse on time) can decrease the total power delivered to the DUT.

An RF Pulse is typically a sine wave with fixed time durations. The yellow trace below is the actual RF output while the pink trace is indicating the on time of the signal being used to gate the output. :

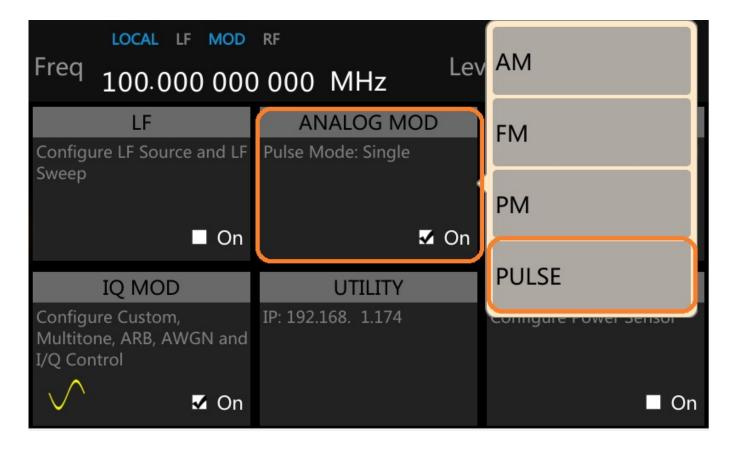

The SIGLENT RF signal sources feature standard pulse capabilities and advanced pulse train options (SSG3000X-PT, <u>SSG5000X-PT</u>) to provide proper pulse control for your application.

In this tip, we use an SSG5060X-V to deliver various pulse widths and durations.. as well as highlighting some of the advanced pulse train options:

Basic pulse control:

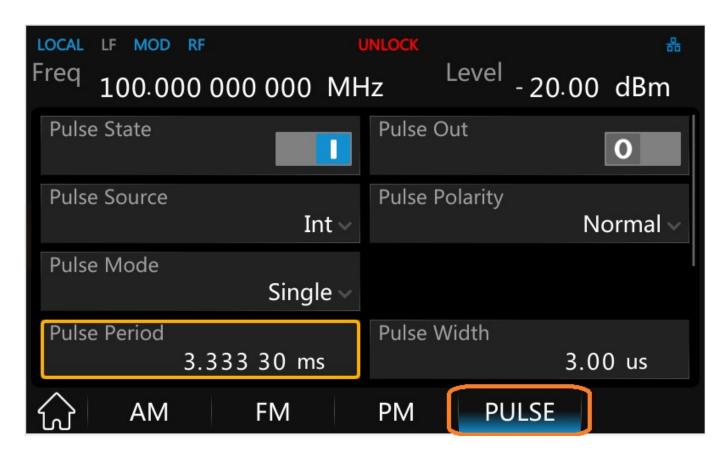

Pulses can be created using the SSG Pulse Modulation setting:

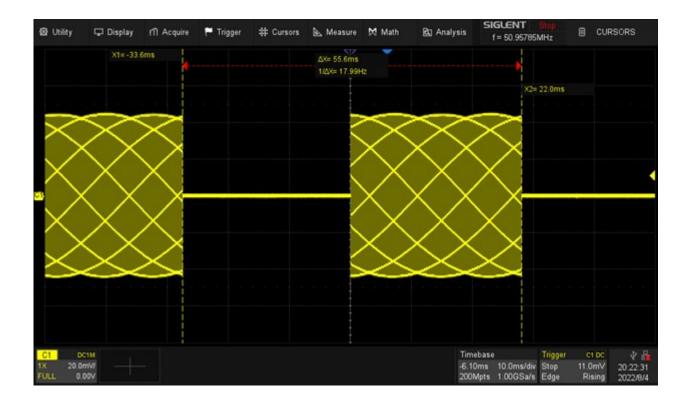

To output a single pulse just set the pulse mode to Single:

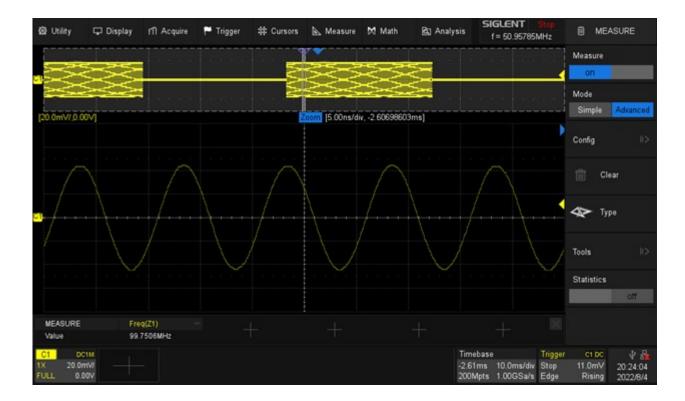

NOTE: Pulse Source can be set to various values. Here, we use the internal (INT) setting which will use the SSG settings to control the pulse. An External (Ext) setting requires an additional external source to either gate or trigger the output.

Oscilloscope capture of 100 MHz RF output with a pulse width: 28 ms and a repetition rate of 18 Hz (0.0555 s total waveform period)

| LOCAL LF MOD RF | *** | | |
|-------------------------|---------------------------------|--|--|
| Freq 100.000 000 000 MH | lz ^{Level} - 20.00 dBm | | |
| Pulse State | Pulse Out | | |
| Pulse Source | Pulse Polarity | | |
| Int ~ | Normal ~ | | |
| Pulse Mode | | | |
| Single 🗸 | I | | |
| Pulse Period | Pulse Width | | |
| 55.550 00 ms | 28.000 00 ms | | |
| 값 AM FM | PM PULSE | | |

Here is an example of a more complex pulse train. Here, the pulse train contains 50 periods, and the pulse train repeats every second. Basically 50-period bursts of RF per second. In this example, we use an external signal to trigger the burst of pulses.

100 MHz RF Pulse width: 3usec @ Repetition Rate of 300Hz with 50 pulses every 1 second

NOTE: For this setup, the SSG requires the SSG Pulse Train option (SSG3000X-PT or SSG5000X-PT part numbers) which enables pulse trains with greater than 2 pulse durations. The setup uses an external function generator (SDG series) to trigger the SSG output. Here, the external trigger source is set to pulse 0 -5 V @ 1-second intervals to trigger SSG output.

Here is the setup screen:

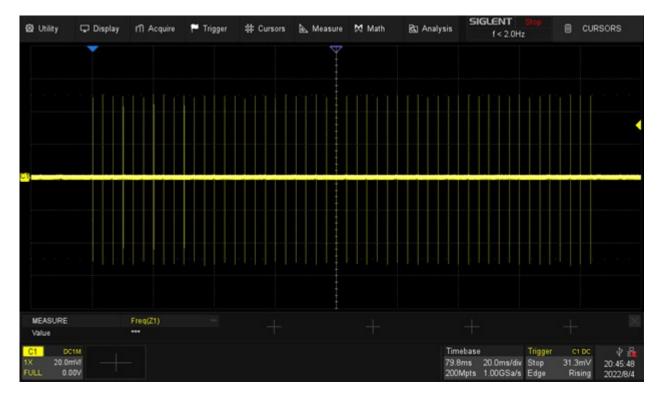

| LOCAL LF MOD RF | U | INLOCK | 8 |
|---|--------------------|------------------------------|---------------|
| Freq 100.000 0 | 00 000 MH | lz ^{Level} - 20 | 0.00 dBm |
| Pulse State | | Pulse Out | 0 |
| Pulse Source | Int ~ | Pulse Polarity | Normal ~ |
| Pulse Mode | Train ~ | Pulse Train | |
| Trigger Out | 0 | Advanced Mode | 0 |
| 슈 AM | FM | PM PULSE | |
| | | | |
| LOCAL LF MOD RF | l | JNLOCK | 8 |
| Frod | 00 000 MF | | å 0.00 dBm |
| Frod | | | |
| Freq 100.000 0 | 00 000 MH | lz ^{Level} - 20 | |
| Freq 100.000 0 Pulse Mode | 00 000 MH Train | Iz Level - 20 Pulse Train | 0.00 dBm |
| Freq 100.000 0 Pulse Mode Trigger Out | 00 000 MH Train | Iz Level - 20 Pulse Train | 0.00 dBm |

Pulse Train gives you this setup for pulse definition:

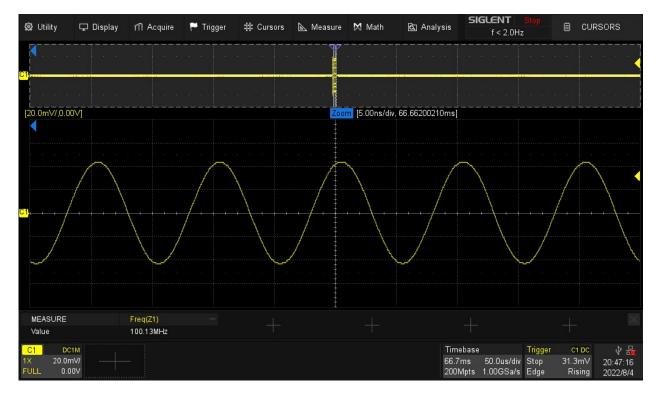

| LOCAL | LF MOD | RF | | UNLO | | al | | 品 |
|----------------|--------|------|------------|-------|-----|----------------------|------|-------|
| Freq | 100.00 | DO C | 000 000 | MHz | Lev | ^{el} - 20.0 | 00 0 | dBm 🛔 |
| | On Tin | ne | Off Time | Count | | | | lai |
| 1 | 3.0000 | 0 us | 3.33000 ms | 50 | | | | |
| (+) | | | | | | | | |
| | | | | | | | | £ |
| \bigcirc | | | | | | | | |
| | | | | | | | | |
| | | | | | | | | H |
| $\hat{\omega}$ | AM | | FM | PN | Λ | PULSE | | |

And the Ext Trigger (0-5V at the rear panel of the SSG) will trigger the pulse train:

| 😫 Utility | 🖵 Display | m Acquire | 🏴 Trigger | # Cursors | | 🕅 Math | 街 Analysis | SIGLENT f < 2.0H; | Stop z | CURSO | RS |
|------------------|-------------------|-----------|-----------|-----------|-------------------------------|--------|------------|--|------------|-------|-------------------------|
| X1= 6 | 53.325ms | | | | ∆X= 3.330ms 1/∆X= 300.30Hz | | | | X2= 66.655 | ms | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |
| MEASURE Value | | Freq(Z1) | | | | | | | | | |
| C1 D0 X 20.0m | 11M mVV 10V | | | | | | 65.1 | ebase Ims 500us/div Mpts 1.00GSa/s | Stop 31 | | ∲ 5 46:34 122/8/4 |

There are also more options like advanced trigger that provide more flexibility with pulse trains:

| LOCAL LF MOD RF | 器 |
|-------------------------|---------------------------------|
| Freq 100.000 000 000 MH | lz ^{Level} - 20.00 dBm |
| Pulse State | Pulse Out |
| Pulse Source | Pulse Polarity |
| Int ~ | Normal ~ |
| Pulse Mode Train ~ | Pulse Train |
| Trigger Out | Advanced Mode |
| AM FM | PM PULSE |

The Advanced Pulse Train feature lets you set the On, Off, Count, Frequency, and level of each pulse for even more flexible pulse source options:

| | LOCAL LF M | OD RF | | | | 윪 |
|------------------------|------------|------------|-------|-----------------|---------|----------|
| Freq | 100.000 0 | 000 000 | MHz | Level - 20 | .00 dB | m |
| | On Time | Off Time | Count | Freq | Level | |
| 1 | 1.00000 ms | 1.00000 ms | 1 | 4.000000000 GHz | -100.00 | |
| + | | | | | | |
| | | | | | | L |
| | | | | | | |
| | | | | | | |
| | | | | | | H |
| $\widehat{\mathbf{W}}$ | AM | FM | PN | 1 PULSE | | |
