Revision History

2021/11/09 6.1.37R8 1. Fixed the problem: very few SDS1xx4X-e stuck at self-calibration 2021/10/15 6.1.37R6 1. Fixed the bug in 6.1.37R2 which cause the WiFi does not work 2021/07/26 6.1.37R2 1. Added data logger featuring Sample and Measurement Logger functions 2. Added Labels 1. Added Labels 4. Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip 5. Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is +time (positive delay relative to trigger) 6. Fixed a bug: Some case there is a blue line on decode bus 9. Fixed a bug: Some case there is a blue line on decode bus 9. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. Wiff supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added sup of the stor UART decoding 4. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of wavefo	Date	Version	Revision
 calibration 2. Be Compatible with a new VGA chip 2021/10/15 6.1.37R6 1. Fixed the bug in 6.1.37R2 which cause the WiFi does not work 2021/07/26 6.1.37R2 1. Added cala logger featuring Sample and Measurement Logger functions 2. Added counter function 3. Added Labels 4. Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip 5. Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) 6. Fixed a bug with Bin2CSV for ROLL mode 7. Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. 8. Fixed a bug: Some case there is a blue line on decode bus 9. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need refering to the latest Program Guide) 3. Added 9 data bits for UART decoder with some special settings 5. Increased baud rate of UART decoder with some special settings 5. Increased baud rate of UART decoder with some special settings 6. Fixed the bug: SO File of Waveform has no indication of the trigger point in the data 			
2021/10/15 6.1.37R6 1. Fixed the bug in 6.1.37R2 which cause the WiFi does not work 2021/07/26 6.1.37R2 1. Added data logger featuring Sample and Measurement Logger functions 2. Added counter function 3. Added Labels 4. Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip 5. Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) 6. Fixed a bug with Bin2CSV for ROLL mode 7. Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. 8. Fixed a bug: Some case there is a blue line on decode bus 9. Fixed a bug: Giften adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoder with some special settings 5. Increased baud rate of UART decoder with some special settings 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the dat	2021/11/09	6.1.37R8	
work 2021/07/26 6.1.37R2 1. Added data logger featuring Sample and Measurement Logger functions 2. Added counter function 3. Added Labels 4. Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip 5. Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) 6. Fixed a bug with Bin2CSV tor ROLL mode 7. Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. 8. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug: Gine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data			2. Be Compatible with a new VGA chip
 2021/07/26 6.1.37R2 1. Added data logger featuring Sample and Measurement Logger functions 2. Added counter function 3. Added Labels 4. Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip 5. Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) 6. Fixed a bug with Bin2CSV tor ROLL mode 7. Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. 8. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug: fine adjusting with customer probe 10. Fixed a bug: fine adjusting with customer probe 11. Fixed a bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 	2021/10/15	6.1.37R6	1. Fixed the bug in 6.1.37R2 which cause the WiFi does not
Logger functions 2. Added counter function 3. Added Labels 4. Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip 5. Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is +time (positive delay relative to trigger) 6. Fixed a bug with Bin2CSV to FIle Converter which can also convert data logger file to CSV. 8. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug: Some case there is a blue line on decode bus 9. Fixed a bug: fine adjusting with customer probe 10. Fixed a bug: fine adjusting with customer probe 11. Fixed a bug: Some case there is a Solated AWG Module Hardware 2020/02/25 6.1.35R2 1. 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 5. Increase			work
 Added Labels Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is +time (positive delay relative to trigger) Fixed a bug with Bin2CSV for ROLL mode Fixed a bug: some case there is a blue line on decode bus Fixed a bug: Some case there is a blue line on decode bus Fixed a bug: After rebooting , Bode Plot cursor can' t be moved Fixed a bug: fine adjusting with customer probe WiFi supported Spaces and Special Characters Added support for the SAG10211 USB Isolated AWG Module Hardware Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 	2021/07/26	6.1.37R2	
 Added NTP (Network Time Protocol) and Time Zone. Also requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is +time (positive delay relative to trigger) Fixed a bug with Bin2CSV for ROLL mode Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. Fixed a bug: Some case there is a blue line on decode bus Fixed a bug: After rebooting , Bode Plot cursor can' t be moved Fixed a bug: fine adjusting with customer probe WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 Added support for the SAG10211 USB Isolated AWG Module Hardware Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			2. Added counter function
 requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update Instructions is also included SDS1xx4X-E_OSV2.zip Modified negative or positive of horizontal delay: Time zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is +time (positive delay relative to trigger) Fixed a bug with Bin2CSV for ROLL mode Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. Fixed a bug: Some case there is a blue line on decode bus Fixed a bug: After rebooting , Bode Plot cursor can' t be moved Fixed a bug: fine adjusting with customer probe WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 Added support for the SAG10211 USB Isolated AWG Module Hardware Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			3. Added Labels
 zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is +time (positive delay relative to trigger) 6. Fixed a bug with Bin2CSV for ROLL mode 7. Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. 8. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			requires OS update to SDS1xx4X-E_OSV2 which is located on the SIGLENT product webpage. The OS Update
 Rebuilt Bin2CSV to File Converter which can also convert data logger file to CSV. Fixed a bug: some case there is a blue line on decode bus Fixed a bug with saving hex MSO CSV file Fixed a bug: After rebooting, Bode Plot cursor can't be moved Fixed a bug: fine adjusting with customer probe WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 Added support for the SAG10211 USB Isolated AWG Module Hardware Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			zero is in trigger. Before trigger, time position is -time (negative delay relative to trigger) and after trigger is
 data logger file to CSV. 8. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug with saving hex MSO CSV file 10. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			6. Fixed a bug with Bin2CSV for ROLL mode
 8. Fixed a bug: some case there is a blue line on decode bus 9. Fixed a bug with saving hex MSO CSV file 10. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			7. Rebuilt Bin2CSV to File Converter which can also convert
 9. Fixed a bug with saving hex MSO CSV file 10. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			data logger file to CSV.
 10. Fixed a bug: After rebooting , Bode Plot cursor can' t be moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG1021I USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			8. Fixed a bug: some case there is a blue line on decode bus
 moved 11. Fixed a bug: fine adjusting with customer probe 12. WiFi supported Spaces and Special Characters 2020/02/25 6.1.35R2 1. Added support for the SAG10211 USB Isolated AWG Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			9. Fixed a bug with saving hex MSO CSV file
 WiFi supported Spaces and Special Characters WiFi supported Spaces and Special Characters Added support for the SAG10211 USB Isolated AWG Module Hardware Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			
 Added support for the SAG10211 USB Isolated AWG Module Hardware Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			11. Fixed a bug: fine adjusting with customer probe
 Module Hardware 2. Fixed the bug: Sometimes PNSU command returns invalid value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			12. WiFi supported Spaces and Special Characters
 value (Need referring to the latest Program Guide) 3. Added 9 data bits for UART decoding 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 	2020/02/25	6.1.35R2	
 Added 9 data bits for UART decoding Fixed the bug of UART decoder with some special settings Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			2. Fixed the bug: Sometimes PNSU command returns invalid
 4. Fixed the bug of UART decoder with some special settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			value (Need referring to the latest Program Guide)
 settings 5. Increased baud rate of UART trigger from 5 Mbps to 20 Mbps 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			3. Added 9 data bits for UART decoding
 Increased baud rate of UART trigger from 5 Mbps to 20 Mbps Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			-
 6. Fixed the bug: The command 'WF? DAT2' returns error length of waveform when digital is enable 7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data 			5. Increased baud rate of UART trigger from 5 Mbps to 20
7. Fixed the bug: CSV file of waveform has no indication of the trigger point in the data			6. Fixed the bug: The command 'WF? DAT2' returns error
the trigger point in the data			
			-
			8. Fixed the bug: After repowering all FFT markers are on

SIGLENT 常和 SDS1xx4X-E Firmware Revision History And Update Instructions

Date	Version	Revision
		just one peak
		9. Fixed the bug: After repowering, signal level of CAI
		trigger can't be recalled
		10. Fixed a few SCPI Commands errors:
		MATH: CURSOR VALUE?
		C3:INVERT_SET? is missing
		HISTORY_LIST? is missing
		DIGITAL:LOW8_SWICHT, typo in name
		C5:COUPLING? typo in name
		11. Fixed the Bode Plot bug: Sometime there isn't enoug
		delay after the scope switches timebase values before
		tries to take a measurement
		12. Fixed the bug : Matlab can' t import 14 M Matla
		waveform files
		13. Fixed the bug : 'WF?' command ignores the length se
		by 'WFSU' for digital
2019/05/15	6.1.33	1. Optimized communication between SDS1xx4X-E an
		SLA1016. This revision (and higher) requires the SLA101
		MUST be upgraded to 8.1.16 (or higher) first. Please tak
		a look at 'Compatibility with SLA1016' at the end o
		the release notes.
		2. AWG Optimized Bode Plot: Accuracy and Sensitivit
		Improvement, New Vari-level Mode for Testing Loo
		Response, Miscellaneous Function and UI Improvement
		3. Optimized FFT UI: Added Peaks, Markers, and searc
		within FFT.
		4. Optimized accessing USB drive so that when a USB driv
		is moved to a computer, Windows will not prompt
		restoration of the USB drive.
		5. Optimize WIFI connection: 63 characters can now be use
		for a WPA2 PSK key.
		6. Added parity options of MARK/SPACE for UART of 9-b
		Decode.
		7. Optimized behavior of the cursors (x-axis): Added
		mode that the cursors remain at the set position on th
		waveform when changing time base.
		8. Optimize self-calibration for channels. (Recommend t
		perform a self-calibration after upgrading.)
		9. Added a pop message: If there are too many serial frame
		in one sample, the Scope does not decode all of the serie
		frames and pop up message of 'Decoding to maximur
		frame number limitation!'
		10. Fixed the bug of ROV measurement.

SDS1xx4X-E Firmware Revision History And Update Instructions

Date	Version	Revision
Date	version	
		11. Fixed the bug: Normal trigger can show more-than-one
		trigger event on the display at one time.
		12. Fixed the bug: Erratic triggering, randomly jumping
		between the first and the second edge of a signal.
		13. Fixe the bug: The acquire time of history is reset to zero
		if the time reach 1 hour and 11 minutes. The delta time is
		also wrong if the period is longer than 1 hour and 11 minutes.
		14. Fixed The SPI triggering issue: the 16-bit trigger wouldn't
		work for a gap >360 ns between the two 8-bit packets.
		15. Fixed the bug: Save/Recall setup of trigger and scale
		issue.
		(SalesForce ID : P-00199) (SalesForce ID : P-00200)
		 Fixed the bug: Reading cursors by SCPI is not accuracy. (SalesForce ID : P-00201)
		17. Fixed the bug: In fine adjust mode, some scale such as
		302 mV/DIV is in the wrong position.
		18. Fixed the bug: LIN decoder doesn't decode frames with
		zero-length response.
		19. Fixed the bug: If the Courser Offset is not a multiple of
		zoom time base, the curser will be replaced when zoomed.
		20. Fixed the bug: The measurements made with the cursor
		in Ref. Give wrong values for all the different probes of
		X1.
		21. Fixed the bug: Measures fairs with GATE give completely
		random values in signals of low frequency.
2018/09/20	6.1.26	1. Added SCPI command to set up gated measurements and return the data.
		2. Customers can save the result of decode list table to a CSV file.
		3. Modified the color of FFT to match the trace selected.
		4. There are some times of quick calibration during warming
		up the SDS XE. Added a menu below Utility to disable the
		quick calibration so that the sampling isn't interrupted.
		5. Created software that converts binary waveform data to
		CSV. It can be downloaded from the embedded web
		server on the scope.
		6. Fixed the bug: "Screen Save" button on web page does
		not work with some browsers.
		7. Fixed the bug: The setting of Educational mode can't be
		saved after power off.

SDS1xx4X-E Firmware Revision History And Update Instructions

Date	Version	Revision
		8. Fixed a bug with MSO decoding. and the SLA1016
		firmware also needs to be updated to 8.1.11.
		9. Fixed the bug: The binary block returned by the
		WAVEFORM command contains the length of the block
		in the "#9" header. This length is incorrect when the NP
		option of the WFSU command is used; the header then
		gives the memory depth instead of the actual size of the
		block.
		10. Fixed the bug of the scope response from the
		WAVEFORM command prefixes the binary block with the
		string "ALL," even when "CHDR OFF" is used.
		11. Added exiting the on-screen keyboard by OK button.
2018/05/31	6.1.25R2	1. Fixed the bug: Once the acquisition is stopped, the scope
		often can't find search events in other channels.
		2. Fixed the bug: In certain situations, the scope freezes
		when the Auto Setup button is pressed.
		3. Fixed the bug: The Pass/Fail mask is not correct at edge
		of screen left and right.
		4. Attenuation and invert indicator were added into the
		channel tab.
		 Any arbitrary probe factor from 1e-6 to 1e6 can be set by universal knob.
		 Got rid of suffix 'A' that stands for 'Acknowledge' from I2C decode.
		 Fixed the bug: The dedicated window for long I2C data sometime lose data at right edge.
		8. Fixed the bug: The decoder sometimes does not show
		any info.
		9. Fixed the bug: After updating to the last firmware and OS
		version, the remote panel/control interface can no longer
		be connected.
2018/05/02	6.1.25R1	1. Increased XY mode wave fresh speed
		2. Changed the displayed system information screen. From
		ADS version of 6.1.25R1, the info screen now shows 5
		sections of software versions, including the OS version ID
		3. Optimized remote webpage screen update rate. Requires
		both OS and ADS update which are located on the
		SIGLENT product webpage.
		4. Add virtual control panel for PC and mobile terminals
		5. Added SCPI commands for Math waveforms (except FFT)
		and digital channel waveforms (ADS version of SLA1016

SDS1xx4X-E Firmware Revision History And Update Instructions

Date	Version	Revision
		should be <u>></u> 8.1.9)
		See the SIGLENT product webpage for software updates.
		6. Added Digital Channel cursor support
		7. Optimized accuracy of horizontal measurement,
		especially when there are only a few samples in very small
		timebase
		8. The 'Link to Trigger' menu modified to 'Copy setting'
		9. Added ability to disable one direction of the full duplex
		encoders
		10. Fixed the bug related to displaying long IC2 decoded packets
		 Fixed the bug: SDS1xx4X-E webpage update would sometimes fail
		12. Fixed the channel inversion bug when changing timebase from 1ms to 2ms
		13. Fixed the bug: Unreadable digital system information
2018/02/27	6.1.20R1	2. Added Bode Plot support for all of Siglent' s SDG
		instruments
		3. Fixed a bug in 6.1.20 which maybe cause the signal
		disappear after self-calibration for channels
2018/02/01	6.1.20	1. Add MSO/Logic functionality
		2. Added automatic vertical scale (volts/div) in Bode Plot
		mode
		3. Added USB WiFi support
		4. Optimized the WiFi GUI
		5. Automatic Roll mode selection will be disabled if
		manually disabled once
		6. Renamed Runt-Trigger in German
		 Fixed a bug in the I2C triggering system of 7 bit Address& Data
		 Improved Auto Setup function with1K compensation output
		 Improved waveform update when using sequence mode on long timebases
		10. Optimize self-calibration for channels
2017/12/18	6.1.12R1	1. Modified Pass/Fail output pulse to 5us
2017/11/16	6.1.12	1. Initial formal release of SDS1xx4X-E

Compatibility between Versions

Source Version	Object Version	Compatibility
6.1.37R6	6.1.37R8	Yes
6.1.37R2	6.1.37R8	
6.1.26	6.1.37R8	Yes
6.1.25R2	6.1.37R8	Yes
6.1.25R1	6.1.37R8	Yes
6.1.20R1	6.1.37R8	Yes
6.1.20	6.1.37R8	Yes
6.1.12R1	6.1.37R8	Yes
6.1.12	6.1.37R8	Yes
6.1.33	6.1.37R8	Yes
6.1.35R2	6.1.37R8	Yes

Compatibility with SLA1016

Source Version	Object Version	Compatibility	
8.1.16	6.1.33/6.1.37R8	Yes	
8.1.11	6.1.33/6.1.37R8	No	
8.1.9	6.1.33/6.1.37R8	No	
8.1.8	6.1.33/6.1.37R8	No	

Update instructions

Important!

Because 6.1.33 fixed a bug with self- calibration for each channel. Please perform a self-calibration if the machine is updated to 6.1.33 (or higher)

• Very important!

Optimized communication between SDS1xx4X-E and SLA1016. If the SDS1xx4X-E will be upgraded to this version (or higher), the SLA1016 **MUST** be upgraded to 8.1.16 (or higher) first.

• Very important!

Because 6.1.20R1 fixed a bug with self- calibration for each channel, immediately perform a self-calibration if the machine is updated to 6.1.20R1 (or higher)
